We are, however, glad to find that a prelate, of such eminence as Bishop O'Brien, agrees so far with us in our view of a question in which we take some interest, as to join cordially in approbation of the end to be attained, and to differ from us only as to the time and the means. We, therefore, have only to commend to his consideration the Horatian lesson—

> Qui rectè vivendi prorogat horam,
> Rusticus expectat dum defluat amnis; at ille
> Labitur et labetur in omne volubilis ævum.

A Pastor's Memorial of Egypt and the Principal Localities of the Holy Land. By the Rev. G. Fisk, L.L.B. Seeley & Co.

This volume is to be regarded as a pastoral letter, rather than a book of travels. It consists of very meagre observations, made by an invalid visitor to Egypt and Palestine, eked out by extracts from old sermons against Popery, conjectural elucidations of Scripture, and interpretations of prophecy. A horror of Romanism and all belonging to it, haunted the author's mind through France and Italy, giving such a jaundiced tinge to his impressions, that he seems not to have recovered the power of distinct vision until he reached the Arabian Deserts. Circumstances led him to take rather an unusual route from Sinai to Akaba; and as this part of his journey possesses the most novelty, and is, also, the most free from his besetting faults, it shall chiefly engage our attention. Mr. Fisk's dread of Popery was for a time suspended by the hospitable reception which he met with at the Convent of Santa Katarina, on Mount Sinai:—

"While seated at the door of our cells, we were soon waited on by several of the monks—one bearing a bason, and another, a large ewer of water, with clean white napkins. While we held our hands over the bason, he poured the fresh water upon the parched skin, which afforded a refreshment that was extremely delightful. Another brought a bountiful supply of water, fresh and sparkling, from the convent well, for drinking. I took a fearfully long draught of it—and felt as if sweet, fresh water were the only fit beverage for man. It was almost too delicious. We had been drinking water little better than diluted mud, for several days previous to our arrival. While our meal was in preparation, they served us with a fragrant cup of coffee; and in these slight and simple matters of refreshment and restoration, I felt as if all the toils of travel might be soon forgotten. How charming it was to be thus housed, after eleven days of toilsome vagrancy—dwelling in tents among wild Arabs—lawless men. How delightful to have our eyes resting—no longer upon the dry and brown sands and rugged mountain passes of the desert—but upon trellised grape vines, of the freshest and most luxuriant verdancy—fresher and greener, I thought, than I had ever beheld before; and upon cypresses and other fair and graceful trees and flowers, in little patches and terraces, growing like youth and innocence in the midst of a bleak and dreary world. The little cells which we inhabited, had their white-washed walls written over, in many places, with the names of travellers from most parts of Europe, who had, from time to time, like ourselves, been tenants for a brief space, and shared the hospitality of these kindly monks."

The disputes between the Arab tribes for the monopoly of guiding European travellers through the desert, have, of late, greatly increased in frequency and fierceness, so that the journey through these regions is likely to be soon restored to all its ancient difficulties and dangers. Had Mohammed Ali been allowed to retain possession of Syria, the influence of his name would have kept the Bedouins in order: but now that the country has been restored to the indolence and incapacity of the Turks, there is little doubt that it must rapidly retrograde into barbarism. To avoid any interruption from the rival tribe of the Mezzeni, Mr. Fisk's guides took an unfrequented route, where water was found but scantily. The discovery of a fountain in the valley of Wady-el-Ayún will remind our readers of Scott's description of 'The Diamond of the Desert,' in the Tales of the Crusaders:—

"Near the mouth of Wadey el Ayún, and standing on a slight rocky elevation, is a single palm tree, of no very considerable size, yet visible at a great distance. Around it are sedges, rushes and such like succulent plants, giving an indication that water is not far away. We pressed onwards with increased speed; and the servants were in advance, in order to secure a supply of fresh water for our use, before it should be soiled by watering the camels. The arrival at a fountain is always an event in desert life. I have often recalled the delight with which I reached that fountain, and drank of its refreshing stream. As soon as we had provided for ourselves, we led the camels down. And there, too, were the Arabs lying flat at the brink of the water, drinking among the camels, like camels. Wadey el Ayún is a long unbroken pass, of many miles extent, along which, frequent small streams wind their quiet way, garnished in the most lovely manner, by tamarisk bushes and palm clumps, on all sides. Here indeed the wilderness seemed to put off its savage grin, and to smile in verdant gentleness; though, on either side of this narrow pass, the rocks are bold, lofty and most picturesque. The pass itself is evidently the deep bed of a vast mountain torrent, winding in the most fantastic manner, and presenting a new and charming picture at every turn. The slightest sound awakened a thousand echoes; and there was an air of wildness about the whole party, occasioned by the loud and harsh voices of our joyous Bedaween calling forth replies, in every variety of tone, from the surrounding rocks and caverns far and near."

The precautions which Suleiman, the guide, had taken, unfortunately for himself, were ineffectual. He was murdered almost in sight of the travellers, under circumstances which show that Bedouin respect for the laws of hospitality is not always security against treachery:—

"On making a careful inquiry into the particulars immediately connected with this sad catastrophe, I collected the following:—It appeared while we were resting on the previous day at Wadey el Ayún, the

Digitized by Google

Mezzeni came down in order to make a final effort at supporting, without bloodshed, their claim to conduct travellers through their territory to Akabah. Sheikh Furriqh was of the number, as I have already stated. When he was about to retire, after an unsuccessful attempt, an Arab of his tribe came and secretly informed him that his (Furriqh's) nephew had been sent on the previous day by one of Suleiman's tribe, in reference to the very question then pending. On receiving this information, Furriqh at once broke off all negociation, and quitted the encampment. It is believed that Suleiman never knew the fact which had been communicated to Furriqh; but news was brought to him that the Mezzeni intended to pursue us with an increased force; and this quite accounts for all the anxiety and timidity which he evinced during the afternoon and evening preceding his death. It appears, that the Mezzeni, bent on accomplishing their purpose, gathered together their force, and following us at dromedary speed, arrived at the encampment as early as two o'clock in the morning —that a deputation from them came to Suleiman, while some of the rest remained in the palm-grove, and others went in advance, and formed ambuscades —that Sheikh Furriqh was one of the deputation— that Suleiman shewed them the usual hospitality of breaking bread with them—that the conference ended without any adjustment of the matter in dispute— that after the deputation had retired to the copse, two Arabs of a neutral tribe, who had come with us from Mount Sinai, went to the Mezzeni in order to mediate, but were unsuccessful—that while they remained Suleiman was sent for, and that having broken bread with the Mezzeni, he had a right to expect that his life would be held sacred—that Suleiman had scarcely reached the adverse party, when Sheikh Furriqh said —'We do not care about the money; but there is blood between us,'—that instantly one of the Mezzeni shot him through the body, and that Furriqh cut him down with his sabre, while two other shots which were fired took effect upon him. My recollection of Furriqh, from the first moment that he appeared in our caravan, is such as to convince me that he would readily commit such an act as this—so subtle—so cruel—so cowardly—without one feeling of remorse or misgiving."

In consequence of the exorbitance of the demands made by the Arabs who claim the guardianship of the route to Petra, Mr. Fisk and his party, instead of visiting the ancient capital of Idumæa, took the road to Palestine which leads through the dreary wilderness of Paran. His brief description of the sensations impressed by these wild wastes is striking:—

"I feel it difficult—as I have before intimated—to convey to an European mind an idea of the impressions left upon my own, by a desert route. Its loneliness amidst numbers—its frequent sameness—its hoary antiquity—the dreaminess of the ordinary pace of the camels—the absence of all human habitations—the sense of vast distance from the great world and its civilization—the fewness of incidents—the melancholy chanting of the Arabs towards sunset—the wild, gypsey-like appearance of the bivouac—all combine to form a picture of sensations (if I may be allowed such an expression), not easily obliterated by time. I feel it all, while now writing, with a keenly excited recollection. On the third day, our way lay through Wadey el Mushehhem, by easy passes between sandstone-rocks, the structure of which in some parts resembles architectural remains—in the form of citadel and towers; and sometimes conveys an idea of the graduated seats of a vast amphitheatre. At other parts they were extremely white and chalky, and appeared to have been washed, and almost polished as if with mechanical smoothness, by the torrents of many a thousand years, whose evident bed gave the line of our march. Finding a deposit of rain water, fit for the camels, and not altogether intolerable for ourselves, we encamped at a rather earlier hour than usual; for water in the desert is too much prized to be knowingly passed by."

From the moment of entering Palestine to his arrival in England, Mr. Fisk abandons description for preaching; and as we are not in the habit of reviewing sermons, we must here take leave of him, sincerely hoping that he may be, in his future works, induced to obey the apostolic injunction—"Add to your faith charity."

Heath's Picturesque Annual for 1844.—*The American in Paris during the Summer.* By Jules Janin. Longman & Co.

Paris and its People. By the Author of 'Random Recollections of the Lords and Commons.' 2 vols. Saunders & Otley.

It is enough to make the sanguine lose all hope, and the patient all temper, to discover that they are indebted for 'Paris and its People' to the success of similar ventures made on home ground. The book could only have been written by one alike ignorant of the language and the literature of the country, unacquainted with society everywhere, and habituated to blundering, even in such simple matters-of-fact as are within the comprehension of the deaf and the dumb. It were idle to waste words in exposing the presumptuous folly of such a writer; we shall, therefore, at once hand him over to the Jedwood justice of the French critics; and especially commend him to the notice of M. Paul de Kock, when, in some future tome of his 'Grande Ville,' he may be in the humour to exhibit, amongst the curiosities to be met with in omnibuses, parterres, passages, restaurants, &c. a Random Recollecter from England.

It is pleasant, after a moment wasted in such bad company, to join a pair of guides so sprightly, entertaining, and in the main, too, reliable, as M. Jules Janin, and M. Eugène Lami. The artist is particularly satisfactory: she is so altogether national. Look at the *tournure* (no English word will express it) of the figures on the grand staircase at Versailles—and a grace will be seen, the speciality of which our Stephanoffs and Chalons could hardly represent. Look at the "Meeting of the Hounds" and the "Steeple Chase:" how drolly French they are, let our Landseers and Grants declare. What need of a description to tell us, that the "party in the opera-box" is "killing music" with *causerie* and not small talk—that the "convalescent" has been brought round by gentle *tisanes*, and not the fiery doses in which our physicians excel? M. Lami's very faults in taste, are so many warrants for his accuracy. We dare not say quite as much for his comrade: because M. Jules Janin is only scrupulous not to be dull—and cares little whence his ideas come, or how his words hit, so that the firework display of picturesque brilliancy is kept up. This we are sophisticated enough to find entertaining—once a twelvemonth. Never, to be sure, was there such a master of florid exaggeration: since Hood's 'Miss Killmansegg,' we have had few such choice examples of accumulation for effect, as the following:—

"There recently died, in a lone house of an obscure street at Fontainebleau, a wretched woman, nearly a hundred years old: this woman lived on brown bread and unwholesome water, and was covered with tatters. The rivulet of the street became more muddy when she ventured to cross it, the smell of the sewer more poisonous. It was dreadful to see the abominable creature, thus crawling along in the filthy attire of the most abject avarice. Her house was not a house, but a fortress, built of freestone, cemented by iron plates; for in it were contained immense riches. There this miserable being, with whom neither alms nor charity had anything in common, either to give or receive, had heaped, not only gold, diamonds, and pearls, but the choicest furniture, the most exquisite marbles, the rarest paintings, the most charming masterpieces of every art. The smoky hole in which this woman, on Sunday, cooked her food for the whole week, contained the finest and most delicate chefs-d'œuvre of the Flemish masters; the Dutch enchanters, the joyous fairs of Teniers, the elegant scenes of Van den Berg, the whims, caprices, and beautiful countenances of Gerard Dow; more than one simple and whimsical drama of Jan Steen's, more than one beautiful heifer of Paul Potter's, more than one fresh and glowing landscape of Hobbeima's, more than one sweetly lighted forest of Cuyp's or of Ruysdaal's! These beautiful works, which had been the ornaments of the palaces of Marly, of the great and little Trianon, or at least of the galleries in the Palais Royal, were dying for want of air and sun. Smoke, cold, and time, which consume every thing, overpowered with their formidable tints the splendid colours, which but lately had rivalled the wonders of creation. So that the stupid rage of this woman crushed, at pleasure, the joy of the future, the glory of past generations, the ornament of the present time. In her fits of ill humour, oh shameful abuse! the horrible old woman struck with her abominable foot, these delicate gems of the fine arts, she treated them as she would have treated lovely, chattering children, as if she could have heard, for her delight, their groans and sobs. How many did she break! what numbers did she destroy! Did she want a board to hold her breakfast of onions, she made a table of some panel of Watteau's; did she want a piece of copper to mend her saucepan, she took a little painting of Vandyke's. The rarest cloth served her to mend the tapestry which hung on the poisonous walls. The same abuse was found in the smallest details. The mug from which the toothless hag drank her cold milk, milk weakened by dirty water, was nothing less than a beautiful porcelain vase of the Sèvres manufacture, on which was yet visible, though cracked, the noble and beautiful likeness of the queen Marie Antoinette. Oh, profanation! that such a mouth should touch the edge of the limpid vase, on which had rested the soft lips of the greatest and most lovely woman in the world! Such was the frightful and startling confusion of this house. A dirty apron stained with the blood of some unhappy pigeon fallen in this dwelling, ignominiously concealed the richest laces, magnificent remnants from the small apartments at Versailles; a golden spoon, graven with the arms of a Montmorency or a Crillon, was put into a wooden porringer. When the hag returned to her hole, she extended her limbs upon the gilt sofas which she had bought at the revolutionary auctions; she placed her half-broken *sabots* upon marble brackets, she looked at her wrinkles in the finest Venetian glasses, she covered her hair with a greasy hood, but round this frayed cap she hung, in derision, pearls large enough to be envied by the princesses of the blood royal. Around her, all was gold and dirt, purple and the coarsest cloth, the finest art and the commonest utensils. She put her vinegar in cut glass, and frightened away the bold flies that rested upon her forehead with a fan that Greuze himself had signed. Her bed, or rather her pallet, was covered with the richest brocades; the straw upon which the monster sought sleep was inclosed in embroidered velvet. * * Thus she lived on, the purse of some, the licence of others, the impiety of all. Miserly among the spendthrifts, skilful and prudent among the dissipated, the sole desire of this depraved creature was to enrich herself with the spoils and sophisms of all these men. She swallowed up every thing; she was like the North Sea, in which nothing reappears after a shipwreck. Thus, in the great shipwreck of former times, she alone survived. She saw all her admirers, one after the other, depart for the scaffold, or for exile; they left without a louis in their pockets, a cent upon their backs, or a hat upon their heads, and yet it never occurred to her, to lend them so much as her coachman's cloak. She saw crawling to the baker's door, those, whose husbands she had ruined by her extravagance; and for these poor, weak, emaciated beings, she had not even a piece of black bread! Even in 1792, this woman could think of counting the money in her strong box! Even in 1793, when distracted kings listened to the noise of the falling axe, she counted her gold! She was accumulating heap upon heap! She went round the scaffolds, to collect the last garments of the victims; she entered the deserted houses, to buy for a mere nothing, the spoils of the absent masters. She would not trust land, even to buy it cheap, for land is faithful, and often returns to its owners; but she trusted gold, which is a vagabond and a traitor, like herself! It was her delight to carry off to her closet the beautiful ornaments and master-pieces of former days, and to insult them in her own fashion! This was her way of revenging herself upon those good ladies, who

Digitized by Google

would have washed their hands immediately, if they had happened, in passing, to touch the cloak of this despised creature. * * Dead to the world, dead to all human joys and affections, overwhelmed by public contempt, which weighed upon her heart, as heavily as the earth of her tomb now weighs upon her body, she nevertheless had strange and sudden fits of anger. It is said, for instance, that when Charles X. hunted in the forest of Fontainebleau, she was in the habit of seating herself in some crossway of the forest, in the middle of the road, and there she waited till the king passed. Then she would stand up, shaking her rags; she would gaze intently at the howling pack, who uttered plaintive groans on their road; then, when it was the king's turn to pass this woman, he would hesitate, become pale as death, and shiver from head to foot. Alas! she recalled to the king of France, now old and threatened on every hand, the folly and madness of the young Count d'Artois."

Credat——but, true or false, the description is forcible enough to have figured in a page of one of the novels of the romantic school, which, from time to time, M. Jules Janin abuses so roundly. In a like amplifying strain, the obituary notice of M. Alexander Lenoir, the antiquarian, is clever. The dithyramb, too, to the memory of poor Herr Schlesinger, the musical composer, who died at New York, is kindly felt, but inexact in most of its allusions, and we suspect, in one or two of its facts. We are not sorry to be spared a similar outpouring on behalf of M. Victor Hugo's daughter, remembering how the romancer had already "improved" that melancholy calamity in the *Journal des Débats*. But the reader must not conclude from the above passage, that 'The American in Paris' passes his whole summer in Père la Chaise. On the contrary, much rurality is—talked of, in the shape of excursions to Versailles, Fontainebleau, and the like; and our last extract, besides its intrinsic sparkle, may amuse some who love contrasts, and who are read in the "green books" of our Mitfords, and Wilsons, and Howitts:—

"It is especially on Sundays and holidays that the Parisian yields himself to his love,—what do I say?—to his passion, for the country. He has worked all the week, but then, with what joy does he greet the Sunday sun! All are sure to rise early; the young man makes himself as handsome as possible, the girl assumes her prettiest look; the father and mother are a little less eager to start, and yet they hasten; this day recalls to them their youth. They breakfast in all haste, the ladies go to hear mass at their parish church, and listen to it with the greatest fervor. Yes,—but no sooner have they quitted the church, than they meet again, and together they ascend, by chance,—you understand, that chance which makes pleased hearts and happy marriages—a large vehicle called a *tapissière*. This vehicle is a whole world; the father, the mother, the children, the young people, the old dog and the puppy, find room upon these seats hung by leather straps; the whole is drawn by a trusty horse well fed and well beaten, who, by carrying all these people, rests from the hard work of the previous week. They set out at a hand trot to arrive walking. What delight! what enjoyment! They salute each other, express their good wishes, and recount the stories from the old newspapers, a little slander sprinkling the joyous conversation. To each party is sure to be invited a clever man, proverbial for his wit, one of those good fellows who are always hungry, always ready to laugh at every thing, and to amuse the Amphytrion with whom they dine. People listen to him, more than they love him. They invite him, because usually he invites himself. Forward then!—to what place is the happy caravan going? They know nothing about it, they are on the way, and will see by and by. Thus they go, sometimes to the Bois de Boulogne, rather vexed by the fortifications which have cut down so many old oaks; sometimes to the Bois de Vincennes,—overlooked by the threatening dungeon; Vincennes, the state prison which was even more dreadful than the Bastile! The oak, under which sat Saint Louis, to administer justice to all, that time-worn and respected oak, does not yet throw a shade sufficiently thick to cover all the lamentations and miseries which have been shut up within these walls. There, was confined the unvanquished Mirabeau, with his delirious frenzy, eloquence, passion, youth, violent love—and what vengeance did he afterwards take, for this abominable captivity! Stoop, and at the bottom of the fossé, you can still see the place where the last Condé, the duke d'Enghien, was murdered in the night by gunshots.—No, the royal oak of Vincennes has not power to blot out this foul stain! Since that day, the Parisian goes less frequently to the Bois de Vincennes. Tell him of the valley of Montmorency, green and tufted,—beautiful shadows—resounding dales,—the house inhabited by the author of *Heloïse*,—the white horse painted by Gérard, the richest sign which ever swung at the door of an inn;—but at the time for lilacs and fresh verdure! for nothing in the world will the Parisian consent to go anywhere, except to the Bois de Romainville. Romainville is the watchword of Parisian joy; it is the country of garlands and rose-coloured scarfs, of impenetrable thickets and gay dances; at Romainville, the Parisian is at home;—there he reigns,—there he breathes,—these are his lands—*mea regna videns!* You should see with what a joyous step they tread the brilliant moss. They look, they contemplate, they admire! They can hardly distinguish the poplar from the oak, barley from wheat, an apple tree from a pear tree; but it is just on account of this happy ignorance of all which forms the country, that the Parisian so much enjoys it. Then, at a certain hour, when there is a little shade around the tree, suddenly a whole banquet is drawn from the immense carriage. O happiness! all that culinary art can prepare in a citizen's household, is found in this vehicle of abundance; pies, cold fowls, hams, salad, biscuits, a nice light wine of Mâcon's, the *pelure d'oignon*, cherries, nosegays for the ladies, and even hay and oats for the horse. No thing and no person is forgotten. Off with the scarfs! let us hang on the branches of the hospitable ash tree our new hats! Are you hungry? are you thirsty? Well, spread out the dainties! The table is ready found,—at the foot of the tree;—this verdant carpet will serve us for a cloth;—the singing birds will provide the music of the repast; they will be paid by the crumbs! In a moment, every thing is ready; they take their places, the same places as in the carriage, and, strange to say! the guests are as eager as the travellers. In less than an hour or two of devouring appetite, two hours of mirth and wild delight, all this food has disappeared, all these bottles are empty, nothing remains but the joy of the repast. Then the gaiety commences anew, the *entrain* is the same, but more lively; the bon mots of the professed joker are no longer needed, each makes his own bon mots. And if by chance, or by good luck, a fine storm arises, the fête is only the more complete for it! 'Look out for the scarfs and the hats!' The hats are concealed at the bottom of the carriage, the scarfs are put into some prudent hiding-place, and now our young girls return with bare heads, very wet and very happy. They have breathed air, health, and hope, for a week's work. Thus for real enjoyment, the environs of Paris have nothing to envy in Paris itself."

But enough of this showy and elegant Annual. It will do its part in lighting up the foggy atmosphere of the current November; how far it deserves a place on the library shelves, after the accomplishment of its immediate mission, is another question.

OUR LIBRARY TABLE.

The Home Treasury.—Another bouquet of flowers,—"immortals," as the florists would call them, for they are not subject to change, and will be fresh and fragrant at Christmas, or on New-Year's Day, or at Easter, or at any other and all other holiday seasons—for which our young friends are indebted to Felix Summerly. We earnestly hope that these little volumes will be welcomed in every family; the paths of learning may thus be made paths of pleasantness, and children's libraries become lustrous with beauty, pleasurable as well as profitable. The illustrations are greatly superior to what are usually met with, even in the best works of the class. Who can look on *Beauty and the Beast*, and not admit, that "the youngest of the three daughters" was justly named "Beauty, on account of her surpassing loveliness"? and then there is *Little Red Riding Hood*, all simplicity, purity, and innocence, as become the character of the "handy little maid." And who can read the first half-dozen pages of this fanciful tale without acknowledging the moral influences of the sympathy it must awaken in children? The *Pleasant History of Reynard the Fox* requires a few words of more serious description. The illustrations of Everdingen are well known as among the treasures of choice portfolios. Felix Summerly has, it appears, by some accident, got hold of the original copper-plates, two hundred years old, had impressions transferred to lithographic stone, corrected these from the finest copies in the British Museum, and now offers them once again for the instruction and amusement of children. We need not say that the story is admirably told, or that the quaint humour and spirit of the old artist will be felt now as ever by children; but as the satire might pass their comprehension, a selection of forty of the illustrations has been published, and poetical justice done to the Fox, who instead of becoming the Lion's Prime Minister, according to the old tradition, is here hanged, according to natural justice.

Popular Tales and Legends—Legends and Traditional Stories.—Two nice little books of fiction, consisting of "Child's Fairy Tales, Ancient Traditions of the North, Irish Legends, Tales of Chivalry, Popular Household Stories as told at the firesides of England, Germany, and Scotland"; collected from all sources, but principally from the German. Grimm's works have furnished not a few, which appear to have been expressly translated. We doubt if the German style of the Illustrations, which are wood-cuts, is suitable for children.

Robin Hood, by Stephen Percy,—with its very good melo-dramatic coloured pictures by Mr. Gilbert, has reached a second edition, for the delight of boys of all ages.

The Original Preface to the History of Old and New Sarum, by H. Hatcher.—The 'History' was undertaken at the request, and published at the cost, of Sir R. Colt Hoare, and his representative, Mr. Merrick Hoare; but when the preface, title-page, and dedication were in type, "they were suppressed," says Mr. Hatcher, "without my consent, and the 'History' published principally under the name of Robert Benson, Esq." Recorder of Salisbury. Against this proceeding Mr. Hatcher protests, and, in justification of his conduct and claims, has here published the correspondence which passed, and a narrative of the facts connected with the subject. It is impossible to pronounce judgment on an ex-parte statement. Mr. Hatcher, we admit, makes out a strong case; but, on the other side, Mr. Hoare, who must be well informed, and has no doubt well considered the evidence, and could have no interest one way or the other, has decided against him.

New Editions.—Since our last announcement, new editions of some interesting and some valuable works have been published. Amongst them are a third thousand of the *Memoirs of the Rev. John Williams*—the eighth and ninth volumes of *The Works of William Jay*, published under the author's superintendence—*Sabbaths at Home*, by H. March—an abridgment of *D'Aubigné's History of the Reformation*, by Mr. Dalton—a second thousand of *Lectures delivered to Young Men in Glasgow*, by Ministers of various denominations—Dr. Foster's *Duties of the Married State*—an eighth edition of Dr. Dick's *Christian Philosophy*—and a second of Dr. Grant's work on the *Nestorian Tribes*. We have also to notice a republication of Coleridge's valuable *Aids to Reflection*, accompanied by Rev. James Marsh's preliminary Essay and three Appendices, one of which, a very long and learned treatise on Rationalism, is from the pen of the poet's daughter, Sara Coleridge. In the domains of poetry and the drama, we have a reissue of Mr. Longfellow's *Voices of the Night, Hymns from the Church Service*, by T. Ragg, and two plays, one religious and one secular,—*The Portion of Jezreel*, by Rev. T. Bradley, and *The Lords of Ellingham*, by H. Spicer. In Church Architecture we have to announce a fifth edition of Mr. Bloxam's work *On Gothic*, and a second of Mr. Barr's treatise on *Anglican Church Architecture*. In Art and Science have appeared a re-issue of Hazlitt's well-known *Criticisms on Art*, a fourth edition of Low's valuable *Treatise*

Digitized by Google

on Agriculture, a reprint of Mackintosh's *Supplement to the Bridgewater Treatises*, new editions of Smee's *Electro-Metallurgy*, extended and improved, a third edition of Mr. E. Lee's *Animal Magnetism*, and a sixth of Mrs. R. Lee's *Taxidermy*. Prof. Orfila's useful *Table of Poisons and their Antidotes*, Dr. Willis's work on *Mental Derangement*, and Miss Lambert's *Decorative Needlework*, with additions, have also been reprinted. In History, Travels, Statistics, &c., we have an eighth volume of *Adolphus's History of England*, bringing the work down to 1798, *Reminiscences of an Old Traveller*, by T. Brown, Esq., Hamilton's *Men and Manners in America*, Dr. Oliver's *Antiquities of Freemasonry*, and Hutchinson's *Spirit of Masonry*; a second edition of Lee's *Baths of Germany*, J. T. Burn's *Letters on Emigration*, and the same author's edition of Granville Sharp's *View of Frankpledge*. In connexion with Travelling, we have *Black's Guides through Glasgow* and *Edinburgh*, both of which have reached, and deservedly, a third edition. We have also to notice a very neat edition of *White's Natural History of Selborne*, with notes, by the Rev. L. Jenyns, which are brief, but pertinent. In Foreign Literature, Baudry's Collection of Italian Authors has reached the fortieth volume, and a new edition of Manzoni's *Promessi Sposi* has been published by the same bookseller; as also the *Storia della Colonna Infame*, with a French translation and preface, by Antoine de Latour.

Almanacks.—The year brings round its customary visitors, and here are some of our old acquaintance. Mr. Bogue, as usual, offers almanacks of various sizes and uses:—Tilt's 'Miniature,' 'Pocket,' 'Hat,' 'Useful,' 'Paragon,' 'National,' 'Poor Richard's,' and 'Sunday' Almanacks. Mr. Cleaver has published a Companion for Churchmen, in the way of a 'Calendar of the Lessons.' Messrs. Smith & Elder issue a 'Meteorological Ephemeris,' by H. Doxat. Pawsey's 'Ladies' Repository' has its usual attractions—and the Stationers' Company have forwarded to us the 'British Farmers' Almanack,' and the 'Gardeners' Almanack,' edited by Mr. Johnson.

List of New Books.—The Correspondence between Burns and Clarinda, with a Memoir of Mrs. M'Lehose (Clarinda), by her Grandson, post 8vo. 8*s.* 6*d.* cl.—History of St. Andrew's, Episcopal, Monastic, Academic and Civil, by Rev. C. J. Lyon, M.A., 2 vols. 8vo. 1*l.* 8*s.* cl.—Greek Prosody, by Prof. Dunbar, 8vo. 4*s.* cl.—The Principles of Physiology applied to Health, by Andrew Combe, people's edition, royal 8vo. 2*s.* 6*d.* swd.—The Constitution of Man, considered in relation to external objects, by Geo. Combe, 5th edit. royal 8vo. 1*s.* 6*d.* swd.—A Practical Grammar of Scottish Gaelic, by J. CROTON AQUEDUCT.

In our recent notice of the Croton Aqueduct, a gigantic undertaking commenced and completed in a worthy spirit by the citizens of New York, we endeavoured to do justice to the liberal and enlightened views which had regulated their proceedings, and which entitled the work to rank with some of the aqueducts of the Italian cities and States. But we expressed our desire that some of the scientific results of so great an undertaking, and some data to enable us to judge of the efficacy with which the Corps of Engineers had carried out these great plans, should be afforded us. Some of these desiderata have reached us much sooner than we could have anticipated, and appear to prove that the scientific calculations of the engineers as to the ultimate effects of their arrangements for the flow of the water, have not corresponded with the expectations which the citizens of New York had a right to entertain.

We should have simply contented ourselves with the insertion of our intelligent correspondent's long letter had we not risen from its perusal with the impression, that in some points the case appears to be argued more strongly against the Engineers than facts advanced seem altogether to warrant. In some of these statements also, our correspondent is himself in error. Now, as his accusations are grave and in several instances weighty,—and further, as the parties he accuses are at a distance which deprives them of an opportunity of vindicating, at an early period, their arrangements and proceedings, we think it but fair that we should put in a demurrer, in order that decree against them may not issue in absence. For the purpose of making the subject clearer, we have divided our correspondent's letter into such portions as treat of different subjects, so as to place our observations in juxtaposition with the subject to which they refer. Our correspondent writes as follows:—

Croton Aqueduct.

"London, Nov.

"Observing in your publication of the 4th instant your critique upon Mr. Towers's account of the Croton Aqueduct at New York, and in your concluding remarks the expression 'that some particulars as to details, velocity, and delivery of the stream, the slope of its surface, and distribution through the city, the expenditure of the *jets d'eau* &c. would be desirable to the scientific world,' I take the liberty of addressing you.

"Having resided near the aqueduct during a considerable portion of the time required for its completion, having seen most of the Reports of the commissioners and chief engineer, and having been furnished by them, by order of the governor of the State, the Hon. W. H. Seward, with all the information I might require, and having witnessed its opening and its subsequent performances, I beg to furnish you with a few particulars relating to it. To give long and extended details, though I have all the materials and calculations at hand, would take more time and space than I can afford, or than you would accord. I will however pass cursorily over the whole.

"The dam which supplies the aqueduct covers, by report of the commissioners, three hundred acres,—not four hundred, as Mr. Towers states; but without precisely crediting his assertion about three millions of square miles of lake and swamp, we may implicitly believe that the supply is most abundant, and the dam more than sufficient; the only trifling difficulty with which the engineers have had to contend being, *how to get the water out of the dam*, not by what means of tributaries in future they shall get more in. In this item the aqueduct is a miserable failure; but facts must speak for themselves: it is not by flowery diction and an avoidance of actual results that in this age men will be satisfied. They expect in the execution of a work of such a magnitude, on which the people of New York have never limited the expense, though the estimate has been doubled, to find a knowledge as far as the most abstruse of all sciences will admit, viz. Hydrodynamics, of constructing dams, of making levels, and of obviating all possible obstructions to the course of the water. We shall see how these have been attended to.

"The dam across the Croton is raised about 40 feet high: the first dam was carried about half way across the river by mason work, well and sufficiently executed for its purpose, the other half was composed of earth or mud, and raised some feet higher than the masonry, over which last the water flowed in ordinary times. But the occurrence of a great flood had not been foreseen, yet such took place in the winter of 1840–41, passed over the mud bank, and swept it completely away. The great rush of water from the dam aiding the flood, carried away mills and houses below, to the loss of from 80 to 100,000 dollars, and the law has yet to decide, if it ever does, whether the engineers, the water commissioners, or the people at large, shall pay the damage. The batter or bevil was 1 foot to 1½ in height, the dam is rebuilt of stone, and is again filled. The aqueduct is completed to Sing Sing, about 8 miles, and a trial is made, so far, as to the capabilities of the aqueduct as to the supply of water, or in other words, how much water in a given space of time could be got out, and delivered thus far. This is in fact the main point; the citizens of New York do not want an artificial lake, but they want the water.

"The surface of the water in the dam is 10 feet above the sole of the aqueduct, or 6½ feet above its axis, the aqueduct being 7 feet high, and about 6 feet wide; this column is the true power of propulsion, not the size of the area of the dam, as most good people think. The water issues from the dam into two strong chambers, to mitigate its violence, as is averred, by twelve gates, each gate when open forming a sectional area of 4½ feet, or totally of 54 feet, whilst the section of the aqueduct is, allowing for curvatures, about 40 feet: previously to letting in the water, a stop-gate is placed in the aqueduct at Sing Sing, and a waste-water opened at the side, of 3 feet square. The commissioners being present, the gates are opened, and the water rushes in, and the following notes are taken and published.

"The water reached Sing Sing at the velocity of 1½ mile per hour. Examined through a ventilator at two and a half miles from the dam, the water was 2½ feet in depth. On its arrival at Sing Sing waste-water, it was 1 foot 9 inches in depth.

"Now we have the basis of correct calculation as to its performance. A sectional area of water in the aqueduct at its outset, no doubt it was then full, of 40 feet, in two miles reduced to 2½ feet depth, and 6 feet wide, giving an area of 15 feet, at Sing Sing: the area being 3 feet by 1 foot 9 inches gives a section of 5 feet 3 inches only. The velocity must have been proportionally reduced, it ending with 1½ mile per hour.

"Now let us suppose the waste-gate closed, and the stop in the aqueduct removed, it is clear that the water would not fill a greater space in the aqueduct, and that the depths would be reduced from 1 foot 9 inches, to 10½ inches in a 6-feet wide area of the aqueduct; but let us, for ready reckoning, allow 1 foot deep in the aqueduct, and velocity 1½ mile per hour. Mile feet cubic feet $1\frac{1}{2} = 6336 \times 6 = 38016 \times 6$, the number of gallons in a cubic foot, and we have 228,090 gallons per hour; $228{,}090 + 24 = 5{,}474{,}204$ gallons per day. Now this is all that issues from the dam; and by no flourish of the pen, by no necromancy, can the subsequent supply to the city be calculated by the capacity of the dam, and its 600 millions of gallons. The true question is, how to get it. From hence it now flows the remaining distance to Harlaem River of 25 miles. During the whole of the course from the dam, the declination of the sole of the aqueduct is 1 foot 1 inch per mile, and the lateral bends or deflections range from 500 to 1000 feet radius.

"At Harlaem river a temporary inverted syphon is laid, the pipes of which are iron; and 3 feet diameter; they are raised about 10 feet above the water. As the height from the surface of the water of Croton Dam to this place has been reduced by first 10 feet to the sole of the aqueduct, and about 36 feet by declination of grade, the total height of dam, said to be 166 feet above mean tide at New York, is here reduced to 120 feet from the debouchure of the aqueduct to the mean tide at Harlaem River."

[Up to this point our correspondent's statement is fair and sufficiently correct, as far as the facts adduced enable us to judge. In the next portion of it, his statements are not only less relevant, but incorrect. He states that a jet of water will only rise to three quarters of the height of the reservoir, from which it receives the pressure that forces it into the air.—"that the height of the jet is in the proportion of three quarters of the propelling power"—this is an

Digitized by Google

assumption wholly gratuitous and incorrect; on the contrary, the height to which the column will rise, depends on the area of the pipe which brings it to the orifice of the jet, on the perfection of the jet nozzle, and on the diameter of the jet. By these means, the height to which a jet may rise, may be made more and more nearly to approximate to equality with the height of the column or head of water which elevates the jet by its pressure; and the statement Mr. Towers makes, that a head of 120 feet raised a jet to 115, that is, to within 5 feet of the upper level, only implies that the required conditions were very satisfactorily complied with in this case; and even if we admit a little exaggeration in the statement of this fact, we are by no means warranted to conclude, with our correspondent, either that Mr. Towers stated a contradiction in terms, or asserted an impossibility in fact—or was ignorant of the first law in hydrodynamics. We have, therefore, rejected the whole of this statement as unjust and irrelevant. In what follows, our correspondent speaks more closely and pertinently to the merits of the case.]

"We will now proceed with the current, and passing over Manhattan valley, we will at once land at the great reservoir of 30 acres, which was destined, —alas! only destined—to contain 600 millions of gallons of water. I beg to call your attention to the following grades of declination as stated to me by the commissioners, and one of the principal engineers.

	Ft.	In.
The descent from the higher to the lower end of the Syphon at Harlaem River, is	2	4
From the nearer side of the river to Manhattan Valley Syphon two miles, grade 1 foot 1 inch....	2	2
Difference between the farther and nearer ends of this Syphon, which is also inverted, is	3	10
From the nearer end of the Syphon to the reservoir is 2 miles, grade 9 inches only.....	1	6
Total feet	10	8 *
Previous descent to Harlaem Bridge	46	0
From the Dam	56	8

"We now enter, with the aqueduct, into the basin or reservoir. Now most people would have supposed that we should have looked down, with the water, from the top of the bank: but no such thing, the idea was not to be thought of; and judge of my surprise when I first saw the aqueduct approaching; for it was not then finished so far. On a level far below the top of the banks, and when finished, the sole of the aqueduct was, and is now, 12 feet 2 inches by my measurement, and by confession of the above engineer. When I named this circumstance, for the first time, to the commissioners, they all totally denied the fact. I offered to accompany any one of them to the spot, but it was not accepted; though they allowed, if it could possibly be so, it must be fatal to a large portion of the undertaking. In naming it to the engineer above alluded to, he said they meant to hold up the water in the aqueduct and syphons till it was raised to their contemplated level. It must, however, be obvious, that this water-logging of the line must nearly destroy the velocity of the water, as it must go back on a dead level to two miles beyond Harlaem River. The thing has been since tried: the water was raised about two feet during the first months of its being introduced to the city, and now stands (May last) about the height of the sole of the aqueduct. Thus, the expense of raising the walls of the reservoir twelve feet on both sides with masonry, and the inside with puddle, has uselessly cost some hundred thousands of dollars; and remains, with the distributing reservoir in similar circumstances, a standing monument of the corps of engineers, sixteen or eighteen in number. By this exploit the intended water in the reservoir has been reduced one half, at least, for the excavation of the northern division was only two-thirds made."

[In the latter part of this statement, also, our opinion is at variance with that of our correspondent. According to the first part of his statement, a delivery of water out of the Croton Dam was provided for, sufficiently great to keep this reservoir full. When full, it was necessary that the walls of the reservoir should be raised as high as the level of that point in the aqueduct at which the excess of water should escape and run to waste, if sent down when the reservoir was full, and the lower part of the aqueduct stagnant. Now, this is precisely what our correspondent says was provided, when he states that "It must be obvious that this water-logging of the line must nearly destroy the velocity of the water, as it must go back on a dead level to two miles beyond the Harlaem River." Here, however, he rather stretches his fact to suit his argument; because, if he allow —which we hope he will—that it might not be expedient, in any case, to raise the water till it was just level with the edge of the reservoir, so that the agitation of the winds would send it over the masonry—if he allow that a couple of feet might and ought to be left of the parapet above the water, to keep in the water even in the agitation of the surface by the strongest gale —as we hope he will allow—then, by his own showing, the engineers have only raised the masonry to such a height as would, when the reservoir was full, raise the level as far back as Harlaem River, where provision was made for the escape and wastage of the water; and so the height to which he objects is no more than a wise provision to save the works from inundation and overflow. Giving, therefore, the accused the benefit of the facts adduced, as far as they are to be reconciled with a just precaution, we must acquit, or, at least, defer condemnation *in hoc statu*.]

"We will now, before we proceed further, describe the entrance of the water into this reservoir. The 4th of July, 1842, was the day fixed upon. All the authorities of New York, with the governor of the State, were present, as well as many distinguished strangers, among whom was Lord John Hay, his vessel, the *Warspite*, being then in the harbour; the firemen of the city, large detachments of troops, six or eight pieces of artillery, with their military bands. The President of the water commissioners made a very appropriate speech, and concluded by presenting 'The Croton Maid of Croton Lake' to the firemen of New York. This is a flat-bottomed boat so named, in which the commissioners and the chief engineer had floated with the stream, at about one mile and a fifth per hour, from the dam to Harlaem River; during which a most extraordinary hydraulic feat occurred—namely, that the velocity of the boat was, for the last ten miles, two miles per hour, with the same declination of grade and stream of water. All this was published at the time. For myself, I had taken a station opposite to the flood-gates, that I might observe the effect, velocity, and quantity of the water. Observing near me some of the workmen employed at the basin, I asked them how long the flood-gates had been closed, as I expected some display. They said the water had been let in at Harlaem River twenty-four hours before, and the gates had been closed on the entrance into the reservoir during that time, and that at twelve o'clock it was three feet and a half deep, and might then be a little more. All being now ready, the flag was hoisted; the pent-up water bounded out; the people, not knowing the trick that had been played, shouted; the artillery roared; the bands played 'Hail Columbia' and 'Yankee Doodle.' Anon the citizens departed, intoxicated with water and delight.

"As it was clear to me, that when this head of water had expended itself, a steady current must follow, so it happened; a very competent witness, who watched it, told me, the next morning, that in the chamber behind the flood-gates, where the water had stood at 3 feet 6 inches, it was reduced to 6 or 7 inches deep, running steadily.

"Next evening I examined and plumbed it myself, and found the stream was 7 inches deep. As the out-flow was within 10 or 12 feet, I judge that up the aqueduct it might have been 1 foot deep. The commissioners being present, we had a conversation as to its velocity. They pointed out to me some pieces of shingle and small wood, that by their orders had been put into the syphon at Harlaem, and which had just emerged. It appeared that they had been five hours in the passage; and as the distance was five miles, the velocity was one mile an hour. This reduced velocity of one-fifth of a mile per hour, will occasion a reduction of one-fifth of the quantity delivered at Sing Sing; making the total delivery into the reservoir daily, 4,379,364 gallons. We have proved that the sole of the aqueduct, on its entering the reservoir, is 56 feet 8 inches below the surface of the Croton Dam; deduct this from 166 feet, the dam above mean tide at New York, and we have 109 feet 4 inches for the height of the sole of the aqueduct above the tide. Then, if we add to 109 feet 4 inches 12 feet 2 inches, the height of the walls of the reservoir = 121 feet 6 inches above mean tide, and 1 foot 6 inches higher than the farther end of the syphon at Harlaem. It is quite incomprehensible how any engineer, with a descent of 10 feet 8 inches in the course of the water before him, levelled and projected by himself, should have made these banks so high. *We may remark, that the decrease of velocity in the water may be fairly attributed to the syphons, where the water, being pressed by a column of water* 100 *feet high, which is equal to the weight of three atmospheres, or forty-five pounds upon every inch of internal surface in the lower pipes, is naturally subjected to three times the ordinary friction.*"

[Here, again, we must stop the current of our correspondent's argument. He is himself again at fault—practically and theoretically wrong. He ought to have known that the theorem he propounds in this last sentence is unknown in science, and contradictory to truth. *We* have printed the theorem in italics. We may simply state, for his information, that the "decrease of velocity in the water" *cannot* "be fairly attributed to the syphons," as the water is *not*, in the circumstances, "naturally subjected to three times the ordinary friction." If he consult the highest authorities, he will find it so. The remarks which follow are vitiated by this error, in so far as they are concluded from this false theorem.]

"We now proceed from the receiving to the distributing reservoir. The distance is two miles, and there are two lines of 3 feet diameter pipes, and they pass over three eminences as syphons, first down and then up, and so on.

"The first descent from the *sole of the great reservoir* to the lowest point, previous to its beginning to ascend, is 27 feet 9⅞ inches; the ascent to the next apex is 33 feet 1 inch; consequently the apex is 5 feet 3⅛ inches higher than the sole of the reservoir; thereby rendering the efflux of that depth of water from the reservoir impossible. This operation cuts off 5 out of 14 feet of water below the sole of the aqueduct. The former reduction, from the top of the embankment to the sole of the aqueduct, cut off 12 feet, which, added to this 5, make 17 feet of altitude of water totally lost out of 26 feet; on which the calculation of a reserve of six hundred millions was made.

"It is of no use tracing these syphons further: the vibrations incident to all upright syphons, alternately advancing and receding, the extrication of air from the water in motion and under pressure, if not attended to, occasioning strangulation, are sufficient to have deterred any educated engineer from having recourse to them.

"On speaking to the commissioners and the engineer above mentioned on this subject, they stated that Frontinus, who had the charge of the aqueducts at Rome in the time of the Emperor Nerva, had used an inverted syphon of 14 feet, and that what was true of 14 feet, must be true of 100 feet. I believe increase of column, of pressure, oscillation of the fluid, or strangulation by evolved air, all conducing to increase of friction, and retardation of velocity, had never entered their heads. They did, however, afterwards leave openings for air at the apices. The above level was made by myself with the utmost care, and afterwards verified by reference to the specification of the contractor's agreement as to gradients in his cuttings. The declination between the two reservoirs is 4 feet, or 2 feet per mile. The walls of the distributing reservoir are 4 feet lower than those of the receiving one, and these were proved to be 121 feet 6 inches above mean tide, at New York; those of the distributing one therefore must be 117 feet 6 inches. Mr. Towers states, that a command of delivery of water at New York, may be taken at 115 feet. Now for the facts and the truth. The water was introduced into this reservoir when the other had about 14 feet in it, and which never since has risen to above 17 feet from the top of the walls, and this is consistent with the state of the other; the first being 12 feet 2 inches below the top, and this added to the 4 feet declination, would make 16 feet, an approximation sufficiently near. Thus then stands the case:—

	Ft.	In.
Top of the walls above tide	117	6
Deduct less than full	17 ft.	
Height of Park at New York above tide-way ..	38	
Total	55	
So much for command; read therefore	62	6

instead of 115.

* Some error here is obvious, but the MS. has been followed.

Digitized by Google

As to application and distribution in the city, we may as well take the fountain in the Park as an index. When the water was first sent from the distributing reservoir to the city, few great side mains, and very few of the service pipes to the houses, were laid. Of course the great principal main through Broadway to the Park was full of water, pressed by the 62 feet 6 inches at the distributing reservoir; when the fountain was opened, it rose to a considerable height. It was published in the papers that its altitude was 60 feet. The truth was, in ten days afterwards, by measurement, it was 36 feet; 60 feet is quite impossible, from the reasons given as to the jet at Harlaem. Now if this could have been maintained, the higher parts of New York might have been supplied with water to most of the upper apartments; but it could not, in accordance with practical experience, be so for any length of time; as mains were opened, especially to the lower parts of the city, and service pipes laid, the pressure on the great main necessarily fell off. So that in March last the fountain only rose 11 feet, and in May last it was reduced to 2 feet, and was not daily open. Yours, &c. J. A. Borron."

From all that has been said, it appears to us that there is but *one* error, and that is a capital error. It is an error, the source of which appears to lie at or near the junction of the Croton dam and the aqueduct, certainly within the first eight miles of the aqueduct. From that region, downwards, the aqueduct appears to do its duty, and to convey its charge with greater rapidity than we should have expected from the very small charge which actually enters it at the head. That error corrected, if corrigible, it seems to us that all the others will remedy themselves; the others seem no more than its consequences. The day is gone by, except in Turkey, perhaps also in China, when the bowstring settled the matter, as far as the demerits and misdeeds or ignorance of the engineers are concerned. We feel sure they are adequately punished by the loss of reputation which must follow errors so great as these are stated to be. But we entreat the citizens of New York *not* to be disheartened. We trust they will try the remedy, which is, to get the wisest man money can procure—to discard those who have made the blunders, if any there be, and without further delay get the matter remedied, ere the town be too much enlarged to be in danger of a scarcity of water. They have, we hope, "*one* poor *wise* man among them, who by his wisdom can save the city." Let them not despise him because he is poor, if he be wise. But! if there be none in New York there is yet gold in Ophir; and there are clever hydropathic practitioners here, whose advice they can easily procure, and who may yet get them out of the scrape—*i. e.* if they will acknowledge they are in one, which remains to be seen.

THE CHINESE EXHIBITION.

There is no word of abhorrence oftener in the mouth of Englishmen than the ugliest word in the language—humbug:—a clear proof that the thing itself is pretty frequent among them. Indeed, so much has it become matter of course, that even honest wares must be put off by its help, and purchasers be humbugged to their own benefit. We have now a collection both entertaining and instructive, advertised like a quacksalver's panacea: "The proprietor, anxious to increase the popularity of this Exhibition, by enabling all classes to become acquainted with its wonderful contents, has reduced the price of admission to 1*s.* each person," &c. Increase the popularity!—increase the *profitability*—this was the right word, but would have been a vast deal too candid. In plain terms, the proprietor had exhausted his half-crown visitors, and, with legitimate shrewdness, lowers his price to attract shilling ones. What forbids him who sold his first crop at a fancy-price because it was procurable, from selling his after-grass at a fair valuation because he can now get no higher? Wherefore affect philanthropical motives when the mere commercial are just as useful to the public? We suppose for the reason above-said: like false Lothario's honied speech, humbug, though very hateful, is still dear to those it has seduced—

> Like the bee-plundered blooms in gorgeous Spring and Summer,
> The victims of the pilferer's hum are pleased as is the hummer!

But a fee laid out on a good exhibition is "twice blessed; it blesses him that gives and him that takes;" so let us have no more pretences about prices reduced through sentimental patriotism instead of justifiable self-interest. We noticed this splendid outlandish raree-show when it was first set up, and have now little to add, seeing it has added little to itself. If we can hardly assert, with the Curator, that the Celestial Empire is at Hyde-Park Corner, as Napoleon said of a little fort outside Toulon—*Toulon est là;* yet the Exhibition, though not "China in miniature," brings it nearer our mind's eye than ever it was before. Neither books nor travellers' tales furnish half so good a means of studying this extraordinary people, who seem the link between an extinct human species and the present one, or at least to indicate a cycle of civilization which preceded the oldest phase of it recognized by western archæologists. Surely ichthyosauri and palæotheria, deinotheria and dodos could not have differed more from modern lizards, elephants, and ducks, than the primitive Chinese from all existing races of men, save their successors? They must have lived, we almost think, when the earth turned on her axis the opposite way, so directly opposed were their habits to such as predominate everywhere else now-a-days. Their descendants yet retain many of these inverse characteristics: thus, among their luxuries enter what any other civilized people would count abominations—sharks' fins, salted earth-worms, sea-slugs, wild-horses' flesh, grubs, larvæ of the sphinx moth, Japan leather, bamboo salads—not to mention dogs, cats, rats, mice, soup of birds' nests, and another delectable *potage*, concocted of mares' milk and blood, far beyond Spartan black broth or witches' gruel for potent *bouquet* and pungent savour; then their soldiers draw their swords *behind* them, and their carpenters pull their saws towards them (the teeth being set points-inward), their compasses have no legs, their mourning is white, and their biers are carried in the rear of funeral processions, respectfulness gives you the left-hand seat, and contempt takes off the hat to you, &c. &c. Those numerous inventions, however, which the world outside the Great Wall have borrowed from the world within it, and the latter from the world before or next after the flood, would connect the races, were this needful to prove their relationship. We will specify a few, as so many rowels of a spur, which may prick the sides of our readers' intent to visit the Chinese Exhibition: printing, mariner's compass (see *Athen.* No. 369), gunpowder, tea, porcelain, mercury, coal, winnowing-machine, paper-money, a species of lithography, ditto of phrenology, cast-iron buildings (see *ante*, p. 718)—all these discoveries were made by the luxuriators upon sharks' fins and Japan leather!

OUR WEEKLY GOSSIP.

When announcing, last week, the demise of Mr. Seguier, late Inspector of the National Gallery, we expressed rather wishes than hopes as to the person who might succeed him: C. L. Eastlake, Esq. R.A. has since been named his successor—we need not declare whether our wishes are disappointed, or our hopes surpassed. It can hardly be said, we think, that this choice reflects much credit upon the discernment of those who made it, for Mr. Eastlake's qualifications were palpable, unmistakeable, unimpeachable; but the promptitude with which it was made deserves public approval. We are glad to find that our air-drawn portrait of the required Inspector, has made itself substance: a gentleman, a scholar, and a connoisseur (as well as artist), "possessing enlightened taste and comprehensive esteem for *all* the Arts, all the Schools, and all the Masters," now superintends the National Collection. Under such auspices, we prognosticate the very best results to it, and through it to those various arts, and through these again to the whole circle of humanizing pursuits and professions. Being personally unacquainted with Mr. Eastlake, we can hazard no conjecture about his *practical* abilities in Connoissance; he may or may not be an oracle on the authentic and the spurious, on styles, manners, dates, pedigrees of pictures, &c. &c.; but these are secondary matters—inborn taste, refined by incessant culture, enlarged views, solid and extensive acquirements; more than all, elevated, poetical, and philosophical spirit—these are the indispensable requisites, and these evince themselves in his works both of pen and pencil. We have little fear that he will pander to the rampant lust for garish and florid colouring, to the green-sick appetite for false-sentiment, or the coarse relish for pseudo-sublime phantasmata,—from one of which into another popular taste plunges headlong, if at all encouraged in such corrupt propensities. Our expectations of the advantages that this appointment may produce, become more sanguine when we consider how far above pecuniary motives acceptance of it must have been; the patriotic hope, and sense of power to effect beneficial changes, can alone have influenced Mr. Eastlake. His stipend is but 200*l.* a year.—Court-patronage, it would appear, anticipated or at least soon followed, another of our suggestions,—the same person monopolizes no longer all the grand pictorial curatorships throughout the kingdom, and fritters away his attention among them: *Sir Augustus Callcot, R.A.* is constituted Keeper of the Queen's Pictures. Albeit we plume ourselves neither on possessing back nor front stairs interest, this second appointment, from its perfect accordance with our wishes, would almost make us think we returned the "Sixteen City Members;" any attempt of ours to characterize Sir A. Callcot's qualifications for his office were in a great measure to rehearse those of Mr. Eastlake.

Respecting the stained glass removed from Stoke Golding, and referred to in a late number (*ante*, p. 1015), we have received the following letter:—

"In a recent number of the *Athenæum* you commented upon the conduct of Dr. Staunton, formerly rector of Stoke-Golding, in the county of Leicester, relative to the abstraction of some painted glass from the chancel of that church. It is due to the character of that gentleman, if living, and to the vindication of his memory, if dead, that the facts be fairly stated to the public, and you will oblige me by giving insertion to the following statement. It is true that Dr. Staunton did remove the painted glass in question, but from what motives is best known to himself. There is no evidence, at least I have none to offer, that he imitated the conduct of Lord Exeter, in the case of Tattershall church, alluded to in the same article, by appropriating any portion to his own use. About ten or twelve years ago, I applied to him for its restitution, and he, without hesitation complied with the request. But when it came, the churchwardens refused to receive it, and without my knowledge of its arrival, it was sent back to Dr. Staunton. The churchwardens' refusal of it is to be ascribed to their being in dudgeon at the time, in consequence of a letter which had been written to the present Bishop of Lincoln, by a Lady Thompson, who having visited the church, complained, and not without reason, to the Bishop of its dilapidated state, and calling his lordship's attention, at the same time, to the abstraction of the painted glass from the chancel window. The churchwardens deemed it an improper interference upon the part of her ladyship, and therefore took vengeance upon her, by refusing to receive their own. It is due, therefore, to their obstinacy that the parish is deprived of a valuable relic, for it was too much to expect, even from Dr. Staunton's sense of justice, that he would of his own free motion, have returned it a second time after such treatment. I am, &c. J. Bray.
Heather, Ashby-de-la-Zouch. (formerly curate of Stoke-Golding).

The School of Design has recently established a class for the instruction of females in the art of wood-engraving; and the proceeding, we regret to hear, has called forth the remonstrance of the wood-engravers, as being one not legitimately within the object for which the school was established, and as unduly interfering with the ordinary principles and practice of the profession: in short, a violation of the principles of "free trade." Of the peculiar suitableness of the art of engraving on wood as an occupation for women, no one who knows anything of the practice of the art, or of the narrow limits to which fashion restricts the employment of women, without subjecting them to degradation, can entertain reasonable doubts. The practice of wood-engraving is clean; it may be best performed in the quiet of home; it requires no extravagant outlay for tools, &c; and a lady, in other respects duly qualified, may, for a few shillings, procure gravers and wood, and establish herself as a wood-engraver. Yet simple as the process of becoming an engraver seems to be thus far, we would guard our fair readers against imagining that any one who has tools and good will may become a wood-engraver. Qualifications far more important, and quite independent of the art of engraving, must be possessed. Lead-pencils and drawing-paper are not costly, and a steel pen and a sheet of paper may be bought for a halfpenny—but the mere possession of them does not make draughtsmen or literary men; nor will wood and tools make an engraver. Even the next step in wood-engraving—the handling of the tools—is not very difficult: a month's practice will enable any delicate and sensitive fingers to cut the wood without

Digitized by Google

slipping; even all the instruction which words can convey, might be learned in another month; but the person who shall have undergone thus much is still far from being a good engraver. If a pupil, accomplished in the art of drawing with precision and delicacy—not merely skilled in copying other drawings, but competent to draw from nature in honest and determined lines—having, too, a perception and feeling for art—should take up wood-engraving, we think it not unlikely that, having learned the first obvious rules of the art, she might, after a practice of six months, render her hand and the graver subservient to the direction of her knowledge. But without a feeling for art, and the capacity to handle dexterously a lead-pencil, let no one conceive that she may become a wood-engraver in this short time. The utmost that could be hoped for is, that after a hard practice of about two years, she might become sufficiently skilful to cut well enough for the cheap illustrated periodicals. In another two years, if kept in sufficient employment, she may be qualified to take rank among the average professional engravers of the day, which, indeed, is no great position to take as an artist; but sufficient, with connexions, to obtain employment. We have gone into these particulars for the purpose of correcting an erroneous impression that wood-engraving is a short road to employment for women. By far the most difficult part of wood-engraving, is the art of drawing—that most essential thing, in which our wood-engravers, with few exceptions, are lamentably deficient. Our advice, then, to young females is, not to enter upon the art unless they are skilled in drawing: but if able to draw well—the human figure especially—then we would certainly encourage them to become wood-engravers, with a fair prospect of success. Have the Directors of the School of Design made such a qualification a preliminary condition of admission? From what we hear of their proceedings, we fear that they have not. If so, their excellent intentions will be frustrated, and they will only have helped to overstock a profession already crowded with mediocrities. If they have, and if they rigidly enforce it, they may, and they ought to, set at defiance all selfish remonstrance.

The Committee for the Holkham Monument, to be erected to the memory of the late Thomas William Coke, Earl of Leicester, have advertised for designs, but in so doing have virtually designed it themselves, having decided beforehand that it shall be a column; and as the Ionic capital is out of the question for any such purpose, the competitors will be reduced to the alternative of either Doric or Corinthian. Another column! an adjective without a substantive, a sentence without a prædicate, a limb without a body, are all so many types of such an architectural *composition*.

The monuments in the Cathedral of Cologne, many of which are much defaced, are being gradually restored. That of the Archbishop Frederic of Saarwerden in the choir of the cathedral, has been restored, it is said with great judgment, by a sculptor of the name of Stephan, to whom it is likely the other restorations will be committed. A notice has also appeared of an extensive work about to be published at Munich, containing working drawings of the portions necessary to complete the building, according to the designs of the architect, together with a history and description of the cathedral. The work is by Mr. S. Boisserée, and is to consist of sixteen copper-plates in royal folio, with the text in quarto, the price of the whole work to be about four guineas.

The glimpses obtained by recent travellers of the literary wealth hived in the various convents of Mount Athos, having awakened the interest of the Western world, our readers know that M. Villemain, the French Minister of Public Instruction, some time since, despatched M. Minoï de Mynas, into Greece, to search for buried treasures in these Eastern libraries. After an exploration of four years, M. Mynas has returned to France, bringing with him, amongst other valuable manuscripts, a collection of fables in Choliambic verse, by Babrias, of which only some fragments previously were known; a fragment of the twentieth book of Polybius; several pieces of Dexippus and Eusebius; a fragment of the historian Pryseas; a new set of fables by Esop, with a life of the fabulist; a work on Greek Syntax, by Gregory of Corinth; an unpublished grammar of Theodosius of Alexandria; a treatise of Philostratus on gymnastics; some collections of civil and canon law; lexicons, grammars, and scholia on the Greek poets, and a number of other works. The safe arrival of these treasures in Paris, and the desirableness of similar researches to be conducted in the like direction, are enhanced by the statements made by M. Mynas. While engaged with the MSS. written on vellum, he was beset by fishermen, begging for bits of parchment, which they use as bait. The paper MSS. serve in winter to stuff the windows, and stop up chinks in the walls of the houses of Mount Athos! The mission of M. Mynas has had this good effect, that it has taught these unfaithful guardians the value of the hoards in their keeping, by the spectacle of the interest taken therein by Western Europe.

A society was not long since formed in Leipsic, somewhat resembling our "Lending Libraries," for the diffusion of good and cheap popular works. The second yearly Report has just been published, from which it appears that its success has been considerable notwithstanding the depression of trade in the neighbourhood. Such societies, if conducted on a liberal principle, would do much service to the cause of national education by taking up those who leave the national schools, and providing them with suitable mental food. We have had occasion to notice one or two attempts of the kind in our own country, and should be glad to see them more extensively adopted.

At the last meeting of the Academy of Sciences, November 20th, M. Mauvais was elected a Member, in the room of M. Bousend, the astronomer, deceased: and the vacancy in the Academy of Inscriptions and Belles Lettres, occasioned by the death of the Marquis de Fortia d'Urban has been filled by the election of M. Mérimée.

Accounts from Hanover mention the death, at the early age of thirty-two, of M. Salomon-Philippe Gans, author of a variety of works on jurisprudence, which have acquired celebrity throughout Germany. The death of this accomplished writer and pleader derives a melancholy and significant interest from the fact of its having taken place in the *Maison de Force* at Celle, where he was confined under sentence of perpetual imprisonment, the penalty awarded by the Supreme Court of Hanover, for having described the government as tyrannical, in the course of his pleading last year, before the tribunals of Göttingen and Osterode, in defence of certain parties charged with political offences.

DIORAMA, REGENT'S PARK.

NOW OPEN, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. RENOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. ROUTOV. Open from Ten till Four.—N.B. The Gloria, from Haydn's Service, No. 1, will be performed during the midnight effect of the Cathedral of Notre Dame.

ROYAL POLYTECHNIC INSTITUTION.—BRILLIANT EFFECTS are produced by ARMSTRONG'S HYDRO-ELECTRIC MACHINE at three o'clock, and at Eight in the Evenings (except Saturday Evening). By LONGBOTTOM'S OPAQUE MICROSCOPE the singular Optical Illusion of converting a Matrix into the appearance of being a Cast in bold relief, is exhibited, with a variety of other curious effects. Particulars of the CHEMICAL and PHILOSOPHICAL LECTURES, which are delivered Daily, are suspended in the Hall of Manufactures. DISSOLVING VIEWS. DIVER and DIVING BELL. Numerous STEAM ENGINE and other MODELS at work. The original CRAYON DRAWINGS of RAPHAEL'S CARTOONS, &c. &c.—Admission, One Shilling.—Schools, Half-price.

SCIENTIFIC AND LITERARY

GEOGRAPHICAL SOCIETY.—*Nov.* 13.—Dr. Beke's routes and observations in Abyssinia.—Dr. Beke, whose passage of the Abai and arrival at Dima, in Gojam, on the 29th of Nov. 1841, are reported in vol. XII. of the R.G. Society's Journal, was detained at Dima until the 20th of the following January, when the Ruler of Gojam and Damot having returned to the neighbourhood of that town, Dr. Beke proceeded in his company to Dembecha. The road, for three days, lay west along a grassy plain, on the north of which rose the mountain chain of Talbawaka, described as covered with perpetual snow, but which in reality, as Dr. Beke afterwards found on crossing the range, is nothing more than hoar-frost. In this plain were seen numerous herds, but no trees, population, or cultivation. On the first day, the conical peak of Debeit became visible, which it continues to be throughout a great portion of Gojam. Several small streams coming down from the mountains, and flowing towards the Abai, were successively crossed, and the party arrived at Lachitachita, where they remained the next day, Sunday. On the 24th they again set out, and taking a N.W. course, entered Damot. This province is described as very different from Gojam, being gently undulating, copiously studded with fine trees, and better peopled. Having crossed the river Gódiet, about thirty feet wide and two deep, the village of Arrat was reached, where the Dejazmach halted for two days, after which they proceeded northward to Dembecha. The road approaching the hills now became very irregular; lofty mountains were seen rising to the N.E., the rivers, Tamcha and Gudela, were crossed and Dembecha was reached. The Dejazmach encamped outside, but a residence was given to Dr. Beke in the town, where he was directed to remain till the Ruler should return from another military expedition. Dembecha is described as having a church and a sanctuary, and several thousand inhabitants; it has considerable commerce, a large weekly market, and is one of the stations of the Mohammedan merchants trading between Baso and Gondar and the coast. At Dembecha, Dr. Beke had to remain five weeks, when the Dejach Goshu returned, and the traveller obtained permission to make a journey north-westward into Agaumider, and to the sources of the Abai. Leaving Dembecha, on March 8th, in company with a daughter of the Dejazmach, who was going to join her husband, Dejach Baria, the governor of Agaumider, the party first traversed a very beautiful country, well peopled, and cultivated, and presenting more the appearance of an English than an African landscape. At the village of Yervorada, where the party halted the first night, Dr. Beke saw a plantation of the *Enset*, described by Bruce. In Shoa and in Gojam, a few plants are frequently met with, but in Damot the number is much larger. On the second day, they began a steep descent into the valley of the river Bir, which, at the ford, is divided into two streams, the first crossed being thirty feet wide and a foot or more deep, and the other about fifty feet wide and two feet deep. The valley of the Bir is not unfrequently exposed to the inroads of the Amuru Gallas inhabiting the opposite bank of the Abai. Having rested at Mankusa, the party continued through the same fertile country, watered by several tributaries to the Bir which streams running with a considerable fall, enable the farmers to turn off the waters for irrigation. The road was continually intersected by these water-courses, which hurried through innumerable fields of every species of production of the country and where the inhabitants were seen busily employed in agricultural labours. The party next stopped for a day at Wassua, which enabled Dr. Beke to visit the neighbouring town of Burie. It was formerly a place of importance, but has now fallen into decay. About eight miles S.W. of Burie is Debelin, the principal town of Wambarrema (Umbarma), and a day's journey beyond this the Abai is reached, in the country of Shinasha (the Chinchon of the Portuguese), which extends to both sides of the river. Having returned to Wassua, the party started for Azga. Dr. Beke observes, that although the inhabitants, in this portion of Damot, understand the Amharic, their native language is the Agáwi, of which he has collected a vocabulary. From Azga, the route lay westward, and having crossed the rivers Fatzam and Zingini, the party quitted Damot and entered the province of Agaumider. The mountains of this country are described by the traveller as consisting of a mass of volcanic cones, that named Fudi being visible far above the rest. On the second day after crossing the frontier, the party reached Banja, the residence of Dejach Baria. At this place Dr. Beke remained a week, during which he visited a village inhabited by some of the remarkable people known by the name of Falashas, from whom he obtained much information of their very peculiar customs, the details of which we cannot go into, and also a number of words of their language bearing a close resemblance to the Agau. Dr. Beke also availed himself of his stay at Banja to visit the western frontier of the province. On the road thither, several tributaries of the Durra were crossed, and a ride of five hours and a half brought the traveller to Chughai in the district of Matakkel towards the valley of the Abai, inhabited by Shankalas, or Pagan negroes. It was

Digitized by Google

market-day when the Doctor arrived, and he describes the commotion occasioned by the presence of the first white man seen amongst them, and the fear with which stout and well-armed men fled and hid themselves as he approached: they are described as all but naked. Beyond these, to the south, is a tribe of Gallas, named Wambera. To the north of the Shankalas is Ginjar, inhabited by Mohammedan negroes, speaking a corrupt Arabic. The people of Agaumider think it no *sin* to sell slaves, which the other Christians of Abyssinia refrain from doing from religious motives. On the 21st of March, Dr. Beke left Banja on his return towards Dembecha, but took a route to the north of that by which he went for the purpose of visiting the source of the Abai, which, if visited, has not been described by any traveller since Bruce. Our traveller thus describes this interesting locality, which he reached on the 26th. "It is a swampy piece of ground covered with grass and rushes, and surrounded by trees of no great size and brushwood, in about the middle of which a spot was pointed out as the source of the Abai, at first scarcely distinguishable from the rest of the marsh, but which, on closer inspection, exhibited a small collection of water about a foot in diameter, and which could just be reached with the hand, when kneeling on a narrow mound of sod that surrounded it." To the N.N.W., and separated from the former by a patch of dry ground about three yards wide, was another source, and on asking for the third, the traveller was told there was no other. As Dr. Beke visited the source of the Abai a second time on the 23rd December, he read to the meeting his notes taken on that occasion also, when, owing to the close of the rainy season, he found the appearance of the place somewhat different. The whole ground was so saturated with water that the spot could not be reached without continually sinking up to the ankles in water. Dr. Beke was accompanied by the priest of the neighbouring church of St. Michael, who brought the cross of the church, with which he blessed the source before giving him some of the water to drink. He related to the traveller several practices which are evidently remains of a higher degree of veneration paid to the spot, at a period when the inhabitants were not yet converted to Christianity. Some of these practices were described by Dr. Beke. From three observations, Dr. Beke makes the latitude of the spot to be about 10° 57′, which, coinciding so closely as it does with that of Bruce (10° 59′ 10″), is entirely corroborative of that traveller. The elevation of the priest's house at Wásha, Dr. Beke determines by the boiling point of water to be 8520 feet, and from a comparison with the climate and vegetation of Angolalla in Shoa, the elevation of which he had determined in the same manner at about 8400 feet, he is of opinion that the estimate cannot be far from the truth.

[In last week's notice of the Society's meeting, the name of Mr. Malby was misprinted *Malley*.]

GEOLOGICAL SOCIETY.—*Nov.* 18.—Dr. Buckland, V.P. in the chair.—The following papers were read:

1. 'On some fossil Remains of an Anoplotherium, and two species of Giraffe, from the tertiary strata of the Sewalik Hills in India,' by Dr. Falconer and Capt. Cautley. The Anoplotherium is an undescribed species, differing from those of the Paris basin, and much larger, its size being between that of the horse and of the Sumatran rhinoceros. It is founded on two upper jaws, with the near molars perfect. It is a true Anoplotherium, as distinguished from the subgenera of Xiphodon and Dichobune. The discoverers have named it *Anoplotherium Sivalense*. The remains were dug out of a bed of clay in the tertiary strata of the Sewalik hills, mixed up with bones of Sivatherium, Camelus Sivalensis, Antelope, Crocodile, &c. The authors describe two species of giraffe. The first, which they designate *Camelopardalis Sivalensis*, is founded on the third cervical vertebræ of an old animal, and they infer it to have been one-third smaller than the existing species. The bone is very perfect, and completely silicified. It measures 8 inches, while the same vertebra of the existing species is 11½ to 12 inches. The bone is more slender in its proportions than the existing one, and exhibits a series of specific differences in addition to the size. The second species they name *Camelopardalis affinis*, provisionally, from its close resemblance to the existing Cape Giraffe, in form and size of teeth, &c. The species is founded on two fragments of the upper jaw, with the back molars, and a fragment of lower jaw containing the last molar. The dimensions agree to within the tenth of an inch with those of a female head in the Museum of the College of Surgeons. The giraffe bones were found along with those of Anoplotherium Camel, *Crocodilus biporcatus*, &c., in a clay bed in the Sewalik hills.*

2. Prof. Sedgwick commenced the reading of a paper, in continuation of his former memoir, on the Geology of North Wales, and described a section across the Berwyns.

STATISTICAL SOCIETY.—*Nov.* 20.—T. Tooke, Esq. V.P. in the chair. A number of donations, received during the recess, were reported.—A paper was read by Prof. Guy, 'On the Influence of Employments upon Health.' The author's former paper on this subject went to examine the influence of employments upon health by means of two concurrent probabilities; the ratio of cases of pulmonary consumption to those of all other diseases, and the observed age at which pulmonary consumption occurs. The results of the two inquiries were found to confirm each other. The object of the present communication was to show the effects of actual employment upon health, and the diseases to which employments gave birth.

INSTITUTE OF BRITISH ARCHITECTS.—*Nov.* 20.—W. Tite, Esq. V.P. in the chair. A paper was read by Mr. Bailey the Honorary Secretary, 'On the several species of Foreign Fir Timber and Deals supplied to the English Market, and their respective qualities for the purposes of Building.' The professed object of the paper was to present to the members, in a condensed form, the more important portions of the information relative to the growth and manufacture of the timber of the North of Europe, and of our American colonies, derived from the evidence of practical men, given before the Parliamentary Committees on the timber duties, at different times and other sources, which might be useful in assisting the judgment of the young architect, in selecting, from the several kinds of timber to be found in the market, the sorts most suitable for the various purposes to which wood is applied in buildings, either for roofs, floors, framing, the external portions, and internal finishings and fittings. The relative properties, as to strength, durability, facility of working, and economy in conversion of the Memel, Dantzig, Riga, St. Petersburg, and the several descriptions of Norwegian and Swedish timber and deals, were described, and their defects noticed, as likewise those of the red and yellow pine of Canada, the use of which is daily increasing in this country. The alleged tendency of the American timber to imbibe and communicate the dry rot was noticed and accounted for from the treatment to which that timber is usually subjected. The larger portion of the timber and deals from Canada is floated down the river St. Lawrence to the port of shipment on rafts, becoming in consequence saturated with water, and in that condition most commonly placed in the confined hold of the ship which is to convey it to this country; the result is, that by far the larger portion, both of the timber in log, as well as the deals, on their arrival here, exhibit symptoms of the dry rot, and if means are not adopted to repress it, the timber becomes strongly infected, and, when placed in a building, not only rapidly decays, but communicates the rot to the timber in contact with it. If it were not for the circumstances above noticed, there is no reason to suppose that the fir timber of Canada is of a less durable nature, or inferior in quality to the European timber of the same description.

In the discussion, which followed the reading of the paper, it was stated that impure pyroligneous acid still retaining the creosote, had been employed with success on timbers affected with the dry rot.

MICROSCOPICAL SOCIETY.—*Nov.* 15.—J. S. Bowerbank, Esq. F.R.S., in the chair.

Mr. A. White read a paper describing the application of a lever movement to the stage of a microscope. It consists of a lever, to the shorter arm of which a ball is firmly screwed, moving in a socket formed by the upper plate of the stage, and a cap, which is a brass plate, secured by two screws to that plate. This lever passes through a perforated ball moving in a socket formed by an arm attached to an immovable part of the microscope, and a cup formed and secured upon the arm, as in the former instance. This lever is about five inches long, having the longer arm equal to three, and the shorter to one. This proportion, however, varies according to position; and hence the necessity of a perforation in the second ball to allow for it. This construction affords facility of motion in every way, and the range, in the instrument exhibited, was ¼ of an inch.

Mr. Jackson read a paper describing an improvement in the mode of applying a divided glass micrometer to the measurement of objects under examination, described by him in a former paper. The micrometer is mounted in a thin brass frame, which slides easily (under a spring) through slits in the opposite sides of the eyepiece, which slits, when not in use, are closed by a quarter revolution of an internal tube, having similar slits. Its divisions are $\frac{1}{10}$th of an inch apart, with one of the spaces divided into five by finer lines, which, as they may be readily brought by the sliding of the micrometer into contact with the magnified edge of the object to be examined, afford great facility of measurement. He concluded with some observations relative to the method of using this instrument, and of finding the value of its divisions, under the various circumstances in which it may be employed.

A paper by J. S. Bowerbank, Esq., entitled 'Additional Observations on the Structure of the Shells of Molluscous and Conchiferous Animals,' was read. The paper, of which this is a continuation, was read on the 18th of January last, and the present Observations relate to the mode in which wounds in the periostracum are repaired, which differs in many respects from the analogous operation in the shelly structures.

ASHMOLEAN SOCIETY.—*Oxford, Nov.* 6.—The President, Prof. Twiss, in the chair.—Prof. Daubeny read a paper on the institution for the cure of Cretinism established near Interlachen, on the Abendberg, a mountain overlooking the lakes of Thun and Brienz.* This institution originated in the benevolent views of its present conductor, Dr. Guggenbühl, a physician of the Canton of Zurich, who has devoted the last eight years to the cure, or rather prevention, of this malady, for which purpose he has selected a situation above the elevation at which the disorder is ever endemic, and admits as patients only those in whom from their tender age, the disease, though apparent, has not as yet fully developed itself. Great attention is paid not merely to the physical but also to the moral treatment of his patients; the physical means consisting of such diet and medicine as are calculated to strengthen the system and to stimulate the dormant energies, for which purpose use is likewise made of electricity, friction, baths, &c.; whilst the moral comprehend a course of discipline applied to all the senses, the organs of which require to be roused and trained to receive the impressions of external objects, as it frequently happens that the cretin is with difficulty made susceptible of any stimuli. The organs of speech also require to be trained, and here an extraordinary degree of patience and perseverance is needed on the part of the conductor and his assistants. In the hope of aiding this benevolent scheme a subscription has been set on foot, not merely in Switzerland but in other countries; and in England Dr. W. Twining, of Bedford Place, has consented to be the medium of transmitting any sums which may be contributed. With regard to the causes of the lamentable condition of mind and body which constitutes cretinism, Prof. Daubeny, made some remarks; and after stating that it could not be attributed to the drinking of water derived from snow, or of that which was destitute of air, or of that which held calcareous matter in solution, he proceeded to show that it was most probably produced by some form of malaria generated by the humidity of the low Alpine valleys, and modified in its character by the peculiar features of the climate, viz. the alternation of extreme heat with severe cold, the interception of the sun's rays, and the stagnation of the air—causes which may also produce a languor of constitution in the inhabitants, which deprives them of the power to resist the action of the *virus*. The difficulties which stand in the way

* The first announcement of the fossil remains of the Giraffe, was made by Capt. Cautley in the Journal of the Asiatic Society of Bengal, vol. 7, p. 658 (15th July, 1838).

* Alluded to before, *ante*, p. 588.

of this hypothesis, the Professor conceived might be removed, if it were admitted, that there are many forms of malaria, as there are of epidemics, and that one form will produce a disease, which like yellow fever, carries off the patient in a few hours, and another form will create a morbid habit of constitution, which may not become manifest till after the individual has been long exposed to its influence, and which, being transmitted to his posterity, shows itself first as goître, and afterwards as confirmed cretinism. The error of medical men he contended to have been, that they imagined all epidemic and all endemic diseases to follow the same laws; whereas the truly philosophical method of proceeding would be to ascertain their peculiar modes of propagation, and to examine in detail the phenomena of each severally. Had medical men observed this rule, they would not have denied that cholera, for example, had been transmitted from one country to another by human contagion, because in its propagation amongst the inhabitants of a town or district it did not follow the same laws as typhus or as small pox; nor would they be disposed to question the malarious origin of goître and cretinism, because the *virus* emanating from the soil of the Alpine valleys, in which these diseases are endemic, does not diffuse itself in the same manner as ague or dysentery. The statistics of cretinism are at present very imperfect, but it is hoped that the official returns ordered by most of the cantons will furnish more correct information, both as to the number of persons affected, who are estimated at not less than 5,000 in Switzerland, and to the physical influences to which the disorder may be referred.

MEETINGS FOR THE ENSUING WEEK.

SAT. Asiatic Society, 2. P.M.
MON. Geographical Society, half-past 8.
TUES. Zoological Society, 8.—Scientific Business.
WED. Botanical Society, 8.—Anniversary.
— Society of Arts, 8.—'On the Patent Metallic Sand,' by Mr. C. K. Dyer.—Mr. Chanter's Moveable Fire Bars and Smoke Burner will be explained.
— Geological Society, half-past 8.
THUR. Royal Society, 1.—Anniversary.
— Royal Academy.—Anatomical Lecture.
— Society of Antiquaries, 8.
FRI. Botanical Society, 8.

FINE ARTS.

The Monumental Effigies of the Temple Church, with an Account of their Restoration in the Year 1842. By E. Richardson. Longman & Co.

Mr. Richardson was the sculptor employed to restore the various effigies of the Crusaders and others in the recent repairs of the Temple Church, and he here presents us with lithographic sketches and a description of the objects which were intrusted to his charge. We heretofore noticed these old monuments, and shall therefore on the present occasion confine our remarks to the work of Mr. Richardson.

The drawings are made upon a scale of an inch and a half to a foot, and are sufficiently large to exhibit the characteristic details. Of all of them a full front view is given, as if the figure were placed in a perpendicular position before the spectator. One or two profiles accompany this view, according to the variety of subject. Mr. Richardson has evidently aimed at accuracy in his drawings, and has succeeded so well in this respect, that we are content with his success, though we might have desired rather more picturesque feeling, especially in the light and shade. On the whole the work, no less than the restoration of the monuments, is creditable to him.

The remembrance of the Crusaders is much quickened by the perpetuation of these old memorials, and as the public interest about them seems rather on the increase than otherwise, our readers may like to have some of the particulars which Mr. Richardson's labours have enabled him to give. Previous to the restoration of the effigies, he describes them as having suffered much from time and ill-usage —thickly covered with coatings of paint, dirt, and white-wash, "which not only concealed all the minute details of sculpture and costume, but made it impossible at first to ascertain the extent of their decay." The process of restoration was commenced, with the very proper determination "of preserving every part of the original surface that might exist, however isolated or small," by the removal of the coatings of dirt, paint, &c. The figures were found to have suffered much decay, both internal and external. This was remedied by stone cement. Remains of "rich original colours and gilding" were found, but "these it was impossible to preserve, because of their adhering to the paint, and owing to the moist and perishing state of the stone and marble. The oil-stains on the marble figures, which entirely hid its rich quality, were next removed. The extent of this operation may be conceived after being informed that in every effigy from ten to twenty thousand rings of mail, besides the surcoat, features, and appendages, had to be carefully gone over. Then followed the stopping in all the general decays and more minute fissures and holes with a cement which closely resembled the material of the effigy, and tended likewise to bind together and preserve the decayed and detached pieces, which otherwise would disappear. This cement, after it was hard, was worked down even with the adjacent surfaces. The effigy was then bedded on a York slab cut to the exact size of the plinth." The missing portions were carefully supplied, in a few cases rather from analogy than positive data.

Those who look for a symbol in every old ecclesiastical sculpture may like to see the interpretations which have been given to the attitudes of these figures. "How far," says Mr. Richardson, "the different positions in which monumental effigies were sculptured, denoted the life of the deceased, the author will not presume to say, but it has been supposed, that the attitudes in many instances were used to some extent in lieu of inscriptions. Thus, the crossing the legs, we are told, implied a vow taken by the Crusader; the hands in prayer, that he died a natural death, and an earnest Christian; the drawing the sword, that he died in action; sheathing it, that he died after vanquishing his enemies. The lion at the feet indicated valour —the dragon, sin." We may, perhaps, more safely admit that "the expressive features, full of individual character and detail, in these effigies, clearly mark them as being portraits."

We must say a word or two on the peculiarities to be found in the individual sculptures. The curious in ancient armour may learn that the inner figure of the upper pair of the four on the north, called Geoffrey de Magnaville, or Mandaville (A. D. 1144), is thought to present a unique example of a "cylindrical flat-topped helmet over the hood of mail." The shield of this figure is said, by Gough, to present the earliest example known of armorial bearings on a monumental effigy in England. Most remains of colour and decoration were found on the inner figure of the upper pair on the south side under the Round Tower, "which is given to William Mareschal, the younger Earl of Pembroke." (A. D. 1231.) The evidence on all sides seems to be conclusive, that the sculpture of the Middle Ages was coloured and gilt. "Traces of delicate flesh-colour remained on the face. The embattled tower had some red left on it; the mouldings some light green. In the two longitudinal recesses on the sides of the cushion fragments of blue or violet glass remained. Traces of gilding appeared on the vingmail throughout, excepting those rings which passed over the narrow bands at the coif and wrists, which, with the band at the coif, appeared to have been blue. The buckles, spurs, and squirrel had also been gilt. There were some traces of red on the field of the shield, but none remained on the lion. The outer surface of the surcoat had upon it considerable remains of crimson lake; the under side, of light blue. There remained on the edges of the belts some red, and some orange on the plinth near the feet."

MUSIC AND THE DRAMA

Madame Dulcken's Soirées.—This is the season for chamber-music, and Madame Dulcken has shown her judgment in opening her house for a series of private concerts of this description, at which, of course, her own pianoforte playing is intended to be a main attraction. She has not often been heard to greater advantage than on Wednesday, her first evening, when she performed Mendelssohn's new Duo with Mr. Lucas,—Hummel's Septuor, with half-a-dozen able confederates,—and Weber's magnificent Sonata for the Pianoforte in D minor. This ought not to have been the least familiar work of the three, —so full is it of beauty, contrast, and thoughts of a striking originality, which now seems to have vanished from the world of musical creation. No symphony for full orchestra was ever conceived on a grander scale than the first *allegro*, the interest of which is not lessened by a single bar of commonplace, or stave "to let." In the middle part of the slow movement, or varied *arietta*, which succeeds—with as artless and unforced a subject as if it had come out of the elder-fashioned Haydn or Pleyel mint for such melodies—occurs a fine example of the manner in which, by unceremoniously treating rhythm and accent, and by using modulations alike unusual and unstudied, Weber knew how to give a regular composition the apparent charm of an improvisation. In the final and most brilliant *rondo*, which was executed by Madame Dulcken, most honourably to her command of nerve, more than one of the newest effects of the pianists even is indicated; and with a freshness of idea, to contemplate which is enough to make the hoper melancholy. The instrumental music was agreeably diversified by two songs given by Mr. Manvers,—by Miss Rainforth's impassioned delivery of the great *scena* from 'Oberon,' which, however, cries aloud for the stage,—and by a couple of Mr. John Parry's drollest drolleries. Mr. Moscheles accompanied the vocal music.

DRURY LANE.—Carlotta Grisi has been succeeded by Pauline Leroux, and M. Petipa, by M. Carey: the male dancer has found an efficient substitute, but Carlotta Grisi is not so easily matched. 'The Devil in Love' is an attractive title for a ballet, though it suggests comic ideas; and this is quite a serious business —too much so, indeed, for three acts, as all who have seen 'Le Diable Amoureux' will remember. The impression made by Pauline Leroux's pantomime, as *Fenella*, some years ago, has been effaced from the recollection of London players by so many "twinkling feet," that she might pass for a novelty here; but time spares neither face nor form, and the admirers of the ballet, sated with a constant succession of young, beautiful, and graceful heroines, are not likely to welcome an almost forgotten favourite, in whom these charms fall short of perfection: nor does this *danseuse* supply by expressive pantomime what is wanting in more material fascination. M. Carey is a powerful male dancer, and his pirouettes are as extraordinary as Perrot's were; but his execution is merely mechanical—not a ray of intelligence lights up his countenance. The action of the ballet, consequently, dragged heavily on, relieved only by Mr. H. Payne's drolleries as the old *Dominie*. The scenery and accessories are handsome.

HAYMARKET.—The names of Madame Vestris and Mr. C. Mathews figure in the bills, but they themselves do not appear. Mrs. Nisbett is still the principal attraction in comedy, for though Mr. Farren is recovering, his appearance on the stage is not yet to be looked for. It is to be hoped he will be able to take a part in the prize comedy, for doubtless all the competitors have had him in view for a principal character. Since our last mention of this theatre, a farce called 'Laying a Ghost' has been added to the bill of fare: it is not a very stimulating dish, but something better is promised.

MISCELLANEA

Paris Academy of Sciences.—Nov. 6.—A report on Savings Banks, by Baron Charles Dupin, was read. The object was to show, from the official tables, that the progress of these Institutions has been constant and rapid, and that they have fully answered the intention of the founders.—The next paper read was from M. Payern on the tendency of the roots of plants to escape from the action of light. He mentions a series of experiments, all showing that, in the same proportion as the plant above ground seeks the light, the root avoids it.—A communication was made by M. Aimé on terrestrial magnetism. Magnetic declinations and inclinations are of two kinds: the one periodical, the other progressive. The first depend upon the position of the sun, and vary with the hours and seasons. Graham was the first to notice this fact in the year 1722, and Cassini confirmed his observations in 1783; and M. Arago, in 1818, ascertained that the magnetized needle, on the existence of an aurora borealis, was suddenly deranged, not only in the places where the aurora was visible, but also in countries where this was not the case. In order to throw light upon this

Digitized by Google

phenomenon, he induced Mr. Kupffer to undertake at Kasan a series of magnetic observations simultaneously with those of Paris, and from the comparison of these two series resulted the fact that the *maxima* and *minima* of the deviation observed at Kasan corresponded with the *maxima* and *minima* at Paris at the same moment. In order to follow up the discoveries, the Academy of Sciences, on the proposition of M. Arago, charged M. Aimé to make a series of observations at Algiers, and provided him with proper instruments for the purpose. His observations commenced in June, 1841, and were continued until the end of 1842. Amongst the results stated by him to the Academy are the following. He says there exists between the temperatures of the surface of the globe and the magnetic declinations so complete a correspondence that he is led to infer that the variations of declination may be generally considered as the consequence of those of the temperatures of day and night, and if this mode of viewing the subject be correct, there must be found in eclipses of the sun a deviation in the normal diurnal course of the needle of declination. As to the annual variation, on comparing the observations of M. Aimé with those of Captain Bérart, made in August, 1832, it is seen that it was in nine years, 24 min. 36 sec., which gives per annum 2 min. 4 sec. of diminution of declination, M. Aimé found that the curves of declination varied little in winter and summer, and that it is towards the equinoxes that the most striking anomalies are manifested. M. Humboldt and other scientific men having expressed an opinion that it would be important to watch carefully the magnetic variations during the periods of the falling stars, M. Aimé did not fail to attend carefully to this suggestion during the month of November, 1841, but the periodical fall of these meteors was not visible at Algiers, and if it did take place it had no action on the magnetic needle.

William Stanley Roscoe.—We hear from a correspondent that this gentleman, the eldest son of the late William Roscoe, Esq., died at Liverpool, on Tuesday, the 31st ult. "To his father," says our correspondent, "he in many points of his character bore a strong resemblance, and in none more than in his attachment to literary pursuits, which he displayed at a very early period of his life, and preserved to its close, with undiminished ardour. He received the rudiments of his education under Dr. Shepherd, of Gateacre, and afterwards passed some time at the University of Cambridge, as a student of Peterhouse. At that period of his life he studied with great assiduity the classic writers of Greece and Rome, of which he continued the perusal till within a short time of his death. With several of the modern languages Mr. Roscoe was also familiarly conversant, but more particularly with the Italian. Of his poetical genius, which was developed in him at an almost precocious age, the fruits have appeared in a volume of miscellaneous poems, published a few years since. In the cultivation of this talent he never ceased to find a favourite occupation for his hours of leisure, and, amongst other less voluminous productions, he has left behind him a translation, in blank verse, of Klopstock's *Messiah*, and of the *Api* of Rucellai. Soon after leaving Cambridge, Mr. Roscoe, though his views were originally directed to the profession of the law, was admitted as a partner into his father's bank, and continued to be connected with that concern, until its failure in 1816. This and similar disasters, if he was, unhappily, not qualified to avert, his conscious integrity, his placid temper, and well regulated mind, enabled him to meet with dignity, and to support with fortitude. During the latter years of his life, he held the office of Serjeant-at-mace to the Court of Passage at Liverpool. The health which he had uniformly enjoyed some months since began to give way. In July, he was advised to try the effects of change of air, and for this purpose he visited Germany, and thence extended his tour to Switzerland. The hopes which were reasonably entertained from this source, and from the anxious application of the most efficient medical treatment, were destined to be disappointed. On his return home, he became gradually weaker, and, in perfect resignation to the will of his Creator, he sank without a struggle into the arms of death. Under an exterior somewhat reserved, and great sedateness of manners, his affections in every relation of life were warm and enduring, and by the friends who knew him intimately his memory will be long cherished, and his virtues best appreciated."

Luton.—The destruction by fire of the mansion belonging to the Marquis of Bute, must be already known to our readers. The papers, as usual on these occasions, speak of it as a place of surpassing beauty and interest. This is hardly correct. The building was of great extent, but from one of the worst designs by Adams, although with some capital points in the plan. What Smirke did there, besides building the chapel, fitted up with stalls and screen-work, from Tittenhanger, we cannot, at the moment, ascertain. The principal part of the valuable collection of pictures has been saved.

Front of the British Museum.—Why do not the Society for Metropolitan Improvements take up this matter, and make a formal application to the Trustees to cause the model of the new front to be exhibited in the Museum? Such an exhibition would not cost one shilling, and be in accordance with that laudable public curiosity which the Trustees ought rather to encourage than suppress. Whether the model be good, bad, or indifferent, the public have a right to see what they are about to get for their money, and it is no infringement on the authority or dignity of a trustee to ask to see an object which he holds in trust for you. AMATEUR.

Metropolitan Improvements.—As a denizen of that semi-subterranean locality alluded to in last week's *Athenæum*, I beg to thank you for your advocacy of that, to us, interesting object, "The Dryad of St. Martin's in the Fields," which has only been spared to this time at the intercession of Dr. Golding, near whose house it stands. With reference also to this neighbourhood, I must observe that all the residents are not to be included among the "natural" objects. Shortly after the late calamitous fire, the inhabitants and neighbourhood thought that there was a good opportunity for improving this crowded thoroughfare, and memorialized the "Woods and Forests," the Board for "Metropolitan Improvements," and also had an interview with the agent of the Marquis of Salisbury, urging them to widen, &c. the narrow part of the court, the greater part then in ruins, but without success: all allowed that it would be a great public improvement, but we had to argue against "breeches pocket," and the latter interest prevailed. The trade of this place is suffering most severely from the tardy operations in the formation of the new street, and many speculations are made as to the reason of the "bit by bit" manner in which it is carried on. That *erudite* writer, the author of 'Random Recollections,' among other *useful* and *interesting* statistical inquiries, naïvely asks, "What becomes of all the pins?" I would also inquire what becomes of *old bricks*, and the answer would, perhaps, be a solution for the tardiness of the present proceedings. It seems there are but few dealers in such antiquities as old bricks, and to prevent the market from being overstocked, and to enable these worthies to get rid of their stock only a *few* houses are pulled down at long intervals, and thus, for the benefit of a few, "my public" suffer. I am, &c.,

An Inhabitant of St. Martin's Court.

Antiquities near Guisborough.—On the 9th inst. Mr. Walker Ord, who is engaged on 'The History and Antiquities of Cleveland,' and other gentlemen, opened two of the tumuli on Barnaby Moor. The first tumulus, which was 90 feet in circumference, consisted of immense masses of coarse unpolished stone; and a few feet from the summit was a huge block of sandstone, 7 feet 3 inches long, 4 feet broad, and weighing about two tons. This stone was placed like a vast slab over a large open hollow beneath. The second tumulus exhibited the same exterior form and appearance as the first, but the interior was essentially different, being composed of a fine, brown, loamy earth, which, from its consistence, had been exposed to the action of intense heat. Considerable quantities of charcoal (burnt oak) were also dug up; this was clustered in masses, or layers, densely heaped together; and the fibrous structure of the wood, the joints, &c. were quite perfect. In this tumulus was discovered a fine ancient urn, the construction most probably of a remote British era, although the superiority of the workmanship and carving would almost induce the antiquarian to attribute it to the later period of the Roman invasion. This urn was placed immediately beneath a large shield-like stone, carved with many quaint devices on the inside. On carefully opening the urn, it was found to contain a large number of human bones, which had been exposed to the action of fire, and these not belonging to one adult person, but evidently to several.

Engravings.—A copy of the works of Mark Antonio, and some of his scholars, containing 133 plates, (117 by Antonio himself), was recently sold at Lyons for 18,000 francs. This copy formed originally part of the collection of Sig. J. M. Zanetti, of Milan. It was offered at the sale of Denon's property, in 1826, for 15,000 francs, and withdrawn, there being no bidder. The collection will now, probably, be dispersed.

With the approval of the Lords Commissioners of Her Majesty's Treasury.

Completion of the Zoology of the 'Beagle.'

Just completed, in 5 vols. bound in cloth, or in half morocco or russia, at a small addition to the price,

THE ZOOLOGY

OF THE VOYAGE OF H.M.S. *BEAGLE*,

Under the Command of CAPTAIN FITZROY, R.N. during the Years 1832 to 1836.

Edited and superintended by CHARLES DARWIN, M.A. F.R.S. V.P.G.S., Naturalist to the Expedition.

Comprising highly-finished representations of the most novel and interesting objects in Natural History, collected during the Voyage of the *Beagle*, with descriptive Letter-press, and an account of the Habits and Ranges.

Contents of the Volumes:

FOSSIL MAMMALIA, by RICHARD OWEN, Esq. F.R.S. Plain Plates, 1*l.* 14*s.*

MAMMALIA, by R. WATERHOUSE, Esq. Coloured, 2*l.* 2*s.*

BIRDS, by JOHN GOULD, Esq. F.L.S. Coloured, 3*l.*

FISH, by the Rev. LEONARD JENYNS, M.A. F.R.S. Plain Plates, 1*l.* 18*s.*

REPTILES, by THOMAS BELL, Esq. F.R.S. F.L.S. Plain Plates, 1*l.* 2*s.*

Each volume is complete in itself, and may be had separately.

GEOLOGICAL OBSERVATIONS

MADE DURING THE VOYAGE OF THE *BEAGLE*,

IN THREE PARTS.

By CHARLES DARWIN, M.A. F.R.S. V.P.G.S.

Just published, in 1 vol. 8vo. price 15*s.* cloth,

Part I.—On the STRUCTURE and DISTRIBUTION of CORAL REEFS.

NEARLY READY,

Part II.—On the VOLCANIC ISLANDS of the ATLANTIC and PACIFIC OCEANS.

Together with a brief Notice of the Geology of the Cape of Good Hope and of Part of Australia.

Part III.—On the GEOLOGY of SOUTH AMERICA.

Elegant and Appropriate Presents for Christmas, &c.

Just published, New Edition, beautifully bound, price One Guinea,

STANFIELD'S COAST SCENERY:

A Series of Forty Picturesque Views in the British Channel, and on the Coast of France, from Original Drawings taken expressly for the Work, by CLARKSON STANFIELD, Esq., R.A.

"It would be a sin against patriotism and good taste not to possess oneself of a work so peculiarly national, and so exceedingly beautiful."—*Metropolitan.*

In imp. 8vo. price 21*s.* elegantly bound,

THE BYRON GALLERY:

A Series of Thirty-six Historical Embellishments, illustrating the Works of Lord Byron, beautifully engraved from Original Paintings, by Sir Thomas Lawrence, H. Howard, Chalon, Westall, Stothard, and other Eminent Artists.

"Adequately to describe the delicate beauty of the splendid plates is not in the power of language. There is no other instance in which excellence in poetry and the arts are so admirably combined."

"The Favorite Annual of the Season."

In large 8vo. price 12*s.* elegantly bound,

FRIENDSHIP'S OFFERING,

FOR 1844.

This long-established Annual now makes its appearance in a new form and a new dress, the size being greatly enlarged, and the list of Steel Engravings increased both in beauty and number, with the farther addition of appropriate Wood Engravings and other Embellishments. The volume, thus changed in everything *but the price* and the genius and distinction of the Contributors, is justly styled "*the best and cheapest Annual of the season.*"

"We are much pleased with this Annual—it is every way improved."—*Times*, Nov. 20.

London: SMITH, ELDER & Co., 65, CORNHILL.

NEW AND CHEAPER EDITION.
3rd edition, with Portrait, 2 vols. fcap. 8vo. 12s.
SIR SAMUEL ROMILLY'S LIFE, written by HIMSELF; with his Letters and Diary. Edited by his SONS. John Murray, Albemarle-street.

RICHARDS'S Universal DAILY REMEMBRANCER for 1844, contains a Diary for Memoranda, Appointments, Bills payable and receivable. With a large variety of Authentic and Useful Information. Printed and ruled in the handsomest manner on the best writing paper.
Richards, Printer, 100, St. Martin's-lane, Charing-cross.
For Forms and Prices see *Athenæum* for Nov. 4.

WILLIAMS'S ALEXANDER (FAMILY LIBRARY).
In a handsome pocket volume, price 5s. in cloth.
THE LIFE and ACTIONS of ALEXANDER the GREAT. By the Rev. JOHN WILLIAMS, Rector of the Edinburgh Academy. Forming part of the Family Library.
*** A Descriptive Catalogue of the Family Library gratis.
London: printed for Thomas Tegg, 73, Cheapside, and may be procured by order of all other Booksellers; where also may be had, price 5s., Hollings's Life of Cicero.

En vente chez Booth, Libraire, Duke-street, Portland-place,
LETTRE à M. DE LAMARTINE, suivie de la REPONSE de M. DE LAMARTINE et d'une Lettre remarquable de MM. DE GENOUDE et DELAPORET. Cette brochure, due à l'Auteur de 'Qu'est-ce que la Loi sur une Monarchie fondée sur le principe de la Souveraineté Nationale?' &c., sera lue avec intérêt par l'homme d'état, par le littérateur, et par l'homme du monde. Prix 2s.

ILLUSTRATIONS to the ROMANCE of 'UNDINE,' by Miss GORDON.
The Work contains 56 Plates, etched on Copper by Miss Gordon, from her own Designs.
"These Illustrations of the wild and fanciful romance of Undine are very beautiful: all of them are worthy of the most educated, poetical, and popular artist in design and engraving."—*Literary Gazette.*
Price, on plain paper, 2l. 2s.; India paper, 3l. 3s., neatly bound in cloth.
Published by Paul & Dominic Colnaghi & Co. 14, Pall Mall East, Publishers to the Queen.

NEW VOLUME OF PLAIN SERMONS.
In 8vo. price 6s. 6d., the Fifth Volume of
PLAIN SERMONS.
By CONTRIBUTORS to the 'TRACTS for the TIMES.'
Rivingtons, St. Paul's Churchyard, and Waterloo-place; and Parker, Oxford.
Lately published,
Vols. I. II. III. & IV., price 6s. 6d. each.

THE PSALMS, WITH NOTES, BY DR. CRESSWELL.
In 12mo. price 6s.
THE PSALMS of DAVID, according to the BOOK of COMMON PRAYER; with CRITICAL and EXPLANATORY NOTES.
By DANIEL CRESSWELL, D.D. F.R.S.
Formerly Fellow of Trinity College, Cambridge.
Rivingtons, St. Paul's Churchyard, and Waterloo-place.

EARLY LESSONS ON THE CHURCH.
In 18mo. price 3s. 6d. the 3rd edition, enlarged, of
THE ENGLISH MOTHER; or, EARLY LESSONS on the CHURCH of ENGLAND.
By Mrs. MORTIMER.
Rivingtons, St. Paul's Churchyard, and Waterloo-place.

In 8vo. price 10s. 6d.
SERMONS on the BOOKS of JOEL, JONAH, NAHUM, MICAH, and HABAKKUK, and on some Passages of ISAIAH and EZEKIEL.
By JAMES RANDALL, A.M.
Rector of Binfield, Berks, and formerly Fellow of Trinity College, Oxford.
Rivingtons, St. Paul's Churchyard, and Waterloo-place.

TROWER'S PLAIN SERMONS ON EXODUS.
In 8vo. price 9s. 6d.
ISRAEL delivered out of EGYPT: being Plain Remarks on the First Fifteen Chapters of the Book of EXODUS: in a Series of SERMONS.
By the Rev. W. J. TROWER, M.A.
Rector of Wiston, Sussex, and late Fellow of Oriel College, Oxford.
Rivingtons, St. Paul's Churchyard, and Waterloo-place.

In 2 vols. 8vo. price 1l. 4s.
THE CHURCHMAN'S YEAR; or, Liturgical Remarks on the Sundays and Saints' Days, and the Lives of the Apostles; with an Explanation of every Epistle, Gospel, and First Lesson.
By GEO. TYLER TOWNSEND, M.A.
Of Trinity College, Cambridge.
Rivingtons, St. Paul's Churchyard, and Waterloo-place.

MR. MORRIS'S PRIZE ESSAY.
In 8vo. price 12s.
AN ESSAY towards the CONVERSION of LEARNED and PHILOSOPHICAL HINDUS: to which the Prize offered through the Lord Bishop of Calcutta has been adjudged by the University of Oxford: with Notes and Illustrations from the Fathers and other Sources.
By the Rev. JOHN BRANDE MORRIS, M.A.
Fellow of Exeter College, Oxford.
Rivingtons, St. Paul's Churchyard, and Waterloo-place.
Of whom may be had, by the same Author,
Nature a Parable: a Poem, in Seven Books.
Small 8vo. 7s. 6d.

In 8vo. price 10s. 6d., the Second Volume of
THE CLOUD of WITNESSES: a Series of DISCOURSES on the Eleventh and Part of the Twelfth Chapters of the Epistle to the Hebrews.
Contents:—The Passover—Passage of the Red Sea—Joshua subduing Canaan—Rahab—Barak—Gideon—Jephthah—Samson—Samuel.
By the Rev. JAMES S. M. ANDERSON, M.A.
Chaplain in Ordinary to the Queen, Chaplain to the Queen Dowager, and Perpetual Curate of St. George's Chapel, Brighton.
Rivingtons, St. Paul's Churchyard, and Waterloo-place.
Of whom may be had, by the same Author,
VOL. I. *Contents:*—Definition of Faith—The Creation—Abel—Enoch—Noah—Abraham—Sarah—Isaac—Jacob—Joseph—The Parents of Moses—Moses.
2. Sermons on Various Subjects. 2nd edit. 9s. 6d.
3. Discourses on Elijah and John the Baptist. 2nd edition. 8vo. 10s. 6d.
4. Memoirs of the Chisholm, late M.P. for Inverness-shire. 2nd edition. 5s. 6d.

NEW EDITION, ADAPTED FOR SCHOOLS.
Now ready, with 80 Diagrams, 12mo. 3s. bound,
THE ELEMENTARY PROPERTIES of the ELLIPSE deduced from the PROPERTIES of the CIRCLE, and GEOMETRICALLY DEMONSTRATED.
By the DUKE of SOMERSET.
John Murray, Albemarle-street.

DR. QUAIN'S ANATOMY.
NEW EDITION, BY DR. SHARPEY AND MR. QUAIN.
Now ready, Part I. (500 pages and 150 Woodcuts,) price 13s. of
ELEMENTS of ANATOMY.
By JONES QUAIN, M.D.
5th edition. Edited by RICHARD QUAIN and WILLIAM SHARPEY, M.D., Professors of Anatomy and Physiology, University College, London.
1 vol. 8vo. with numerous Illustrations on Wood.
Printed for Taylor & Walton, 28, Upper Gower-street.

CHEMICAL WORKS PUBLISHED BY Taylor & Walton, Upper Gower-street.
Liebig's Animal Chemistry. 2nd edition. 1 vol. 8vo. 9s. 6d.
Liebig's Chemistry of Agriculture. 3rd edition, with large Additions, and partly rewritten. 8vo. 10s. 6d.
Liebig's Chemical Letters. Fcap. 8vo. 4s. 6d.
Fresenius and Will's New Methods of Alkalimetry, &c. 12mo. 4s.
Turner's Chemistry. 7th edition. By Professors Liebig and Gregory. 1 vol. 8vo. 1l. 8s.

In 1 vol. royal 8vo. with Portraits and other Illustrations, price 12s. boards,

HISTORY of the UNITED STATES, from the Discovery of the American Continent to the War of Independence.
By GEORGE BANCROFT.
Among other high encomiums which have been pronounced upon this work, is the following by the celebrated Professor HEEREN, of Gottingen:—
"We know few modern historic works in which the author has reached so high an elevation at once as an historical inquirer and an historical writer. The great conscientiousness with which he refers to his authorities, and his careful criticism, give the most decided proofs of his comprehensive studies. He has founded his narrative on contemporary documents, yet without neglecting works of later times, and of other countries. His narrative is everywhere worthy of the subject. The reader is always instructed, often more deeply interested than by novels or romances. The love of country is the muse which inspires the author; but this inspiration is that of the severe historian, which springs from the heart."
Glasgow: A. Fullarton & Co.; Edinburgh, A. & C. Black; London, W. S. Orr & Co.; and sold by all Booksellers.

ELEGANT PRESENTS
FOR CHRISTMAS AND THE NEW YEAR.
Just published,
Tastefully bound in cloth, price 9s.; elegantly bound in morocco, price 11s.

THE BOOK of SCOTTISH SONG: a Collection of the best and most approved Songs of Scotland, Ancient and Modern; with Critical and Historical Notices regarding them and their Authors. Illustrated with exquisitely-engraved Frontispiece and Vignette.
"This collection must prove a source of refined and innocent pleasure to hundreds of thousands."—*Tait's Mag.*
"This cheap and neat little work comprises a larger body of Scottish Song than has ever before been brought together in one publication."—*Spectator.*
"This is assuredly a remarkable publication—remarkable for its neat and elegant appearance, its beautifully small but readably clear type, and the sweetly diversified borders that stretch along the double columns."—*Monthly Review.*
"The collection has been made with taste and feeling; the typography is excellent; each of the miniature pages is encircled with a delicate border printed in colours: there is a sweet Vignette Title-page and Frontispiece, and some really interesting critical and historical notices appended."—*Metropolitan Mag.*
"It is decidedly the best and most extensive collection of songs that has ever issued from the press."—*Liverpool Albion.*
"It is faint praise to say, that this collection of Songs is the best that has fallen into our hands."—*Kendal Mercury.*

In 4 vols. elegantly bound in cloth, 28s., or richly bound in morocco, 40s.
THE CASQUET OF LITERARY GEMS.
Illustrated with 25 Illustrative Engravings from Original Drawings.
"We do not know any work which we could name, as containing greater attractions than the Casquet of Literary Gems."—*Athenæum.*

In 4 vols. elegantly bound in cloth, 28s, or richly bound in morocco, 40s.
THE REPUBLIC OF LETTERS.
A Selection in POETRY and PROSE, from the Works of the most Eminent Writers, with many Original Pieces.
Illustrated with 25 Illustrative Engravings after the most admired Artists.
"The Republic of Letters ought to be on every parlour table, and in every family library, for it is really a gem; and one too of surpassing lustre."—*Scottish Lit. Gaz.*
Blackie & Son, Queen-street, Glasgow; South College-street, Edinburgh; and Warwick-square, London.

DISEASED AND HEALTHY LIVES ASSURED.
MEDICAL, INVALID, and GENERAL LIFE OFFICE, 25, Pall Mall, London. Capital 500,000l. This Office is provided with very accurately constructed Tables, by which it can Assure Diseased Lives on Equitable Terms. Increased Annuities granted on unsound Lives, the amount varying with the particular disease. Members of Consumptive Families assured at Equitable Rates. Loans granted upon personal security.
F. G. P. NEISON, Actuary.

EUROPEAN LIFE INSURANCE COMPANY, No. 10, Chatham-place, Blackfriars, London. Established January, 1819.
President—Sir James Rivett Carnac, Bart. Rook Cliff, Lymington.
Vice-President—Geo. Forbes, Esq. 9, Park-square, Regent's-park.
With Twelve Directors.
FACILITIES are offered by this long-established Society to suit the views and the means of every class of insurers. Premiums are received yearly, half-yearly, or quarterly, or upon an increasing or decreasing scale. Or one-half only of the usual rate, with interest on the remainder, will be received for five or seven years, the other half to be paid at the convenience of the assured.
The insured for life participate septennially in the profits realized.
A liberal commission is allowed to Solicitors and Agents.
DAVID FOGGO, Secretary.
N.B. Agents are wanted in towns where none have been yet appointed.

YORK AND LONDON LIFE ASSURANCE COMPANY, King William-street, London. Empowered by Act of Parliament. *Directors.*
George Frederick Young, Esq. *Chairman.*
Matthew Forster, Esq. M.P. *Deputy Chairman.*
The superiority of the system of Assurance adopted by this Company will be found in the fact that the premium required by a bonus office to assure 1,000l. on the life of a person in the 20th year of his age, would in this office insure 1,291l. 7s. 6d.
Assurances at other ages are effected on equally favourable terms, and thus the assured has an immediate bonus instead of a chance dependent upon longevity and the profits of an office. In cases of assurance for a limited number of years, the advantage offered by this Company is still greater, no part of the profits of a bonus office being ever allotted to such assurances.
Prospectuses, containing tables framed to meet the circumstances of all who desire to provide for themselves, or those who may survive them, by assurance, either of fixed sums or annuities, may be had at the Office, as above, or of the agents.
J. REDDISH, Secretary.

NORTH BRITISH INSURANCE COMPANY, 4, New Bank-buildings, and 10, Pall Mall-East: instituted in 1809. Incorporated by Royal Charter.
His Grace the Duke of Sutherland, *President.*
Sir Peter Laurie, Alderman, *Chairman of the London Board.*
Francis Warden, Esq. (Director H.E.I.C.) *Vice-Chairman.*
John Webster, M.D. 24, Brook-street, *Physician.*
Capital 1,000,000l. fully subscribed.
Annual Revenue, from Life Premiums.....£34,000
Accumulated Assurance Fund, exceeding 350,000
DIVISION OF PROFITS.
The Directors beg to remind those desirous of effecting Assurance on their lives, that all Policies opened with this Office on the participating scheme, before the 31st of December next, will secure the full benefit of the current year's entry at the approaching septennial investigation in 1844, when, from the prosperous state of the Company's business, a considerable addition, or bonus, to the existing policies may be confidently expected.
Fire Insurances may be effected at the Company's Western Branch Office, 10, Pall Mall East, on Private Houses, Country Mansions, Furniture in the same, and Farm Steadings, at the lowest rates of premium corresponding to the risk.
Prospectuses, containing Tables of Rates, and a full List of the Directors, &c. who are all responsible *Partners*, may be obtained on application to Messrs. B. and M. Boyd, Resident Members of the Board, 4, New Bank-buildings; or to the Actuary, 10, Pall Mall East.
JOHN KING, Actuary.

PELICAN LIFE ASSURANCE OFFICES, 70, Lombard-street, and 57, Charing-cross.—Established 1797.

Directors.	
Matthias Attwood, Esq. M.P.	Sir W. Heygate, Bart.
W. Stanley Clarke, Esq. F.R.S.	Kirkman D. Hodgson, Esq.
John Coope, Esq.	F. Hurst Law Lawrence, Esq.
William Cotton, Esq. F.R.S.	J. Petty Muspratt, Esq.
Sir William Curtis, Bart.	George Shum Storey, Esq.
William Davis, Esq.	C. Hampden Turner, Esq.
J. A. Gordon, Esq. M.D. F.R.S.	Matthew Whiting, Esq.

The Plan of this Office will be found to comprise all the Solid Advantages of Life Assurance.
Persons have the option of insuring upon the Return or Non-Return Systems; and the Tables, which include Ascending and Descending Scales of Premium, have been framed to suit the convenience of all parties.
The Rates have recently been reduced agreeably to the most approved calculations; they are also verified by the experience of the Office during Forty Years, and are as low as consistent with safety; those adapted to the RETURN SYSTEM entitle its assured to an equitable participation in the surplus premiums, according to the plan detailed in the Company's prospectus.
The Assured under both Systems will possess the guarantee of a large PAID-UP Capital, and the further security of a responsible body of Proprietors, without being exposed to the liabilities of partnership.
Policies are purchased on liberal terms when the object of an assurance is effected;—or, loans will be granted thereon to the extent of five-sixths of such purchase-money.
Prospectuses and every information obtained on application at the Offices as above, or to the Agents of the Company established in every City and principal Town in the Kingdom.
R. TOOKER, Secretary.

Digitized by Google

ECONOMIC LIFE ASSURANCE SOCIETY,

No. 34, Bridge-street, Blackfriars, London; established 1823. Empowered by Act of Parliament, 3 William IV.

Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits.

The bonus declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1839 a second bonus was declared, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.

Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.

CAMPBELL JAMES DOWNER, Sec.

VICTORIA LIFE ASSURANCE COMPANY.

Trustees.

Sir Jas. Duke, Ald. M.P. *Chairman* | Benj. Hawes, Esq. *Dep. Chairman*
Benj. Barnard, Esq. | Charles Baldwin, Esq.

Peculiar advantages are offered by this Company. Thus:—

Parties assuring the lives of others may make their policies secure, notwithstanding the life assured may go out of the limits of Europe, without the necessary permission of the Directors having been previously obtained.

Credit of half the premiums for the first five years allowed on policies effected for the whole term of life.

Assurances may be effected *with* or *without* profits—on an ascending or descending scale, or for short periods.

Advances made to Assurers on real or undoubted personal security, for terms not exceeding three years, repayable by instalments.

Attention is particularly requested to the detailed prospectuses of the Company, which may be obtained at the Office, 18, King William-street, City, or by letter, addressed to the Secretary. WILLIAM RATRAY, Actuary and Secretary.

THE WESTMINSTER and GENERAL LIFE ASSURANCE ASSOCIATION,

At the WESTMINSTER FIRE OFFICE,
No. 27, King-street, Covent-garden.

A DIVIDEND OF THE PROFITS OF THIS SOCIETY WAS DECLARED ON THE 1ST JANUARY, 1842, by which an addition, amounting on the average to 45 PER CENT. on the Premiums received was made to all Policies entitled to share therein.

FOUR-FIFTHS, or 80 PER CENT. of the total profits, are divided among the Assured at intervals of five years; and all Policies on which two payments have been made, participate in the division.

The Profits respectively allotted may be received by the Assured in present money, by a reduction of the Annual Premium, or by adding to the Policy an equivalent reversionary sum.

All Persons Assured on their own lives for 1,000*l.* or upwards, have the right (after two Annual payments) to attend and vote at the General Meetings of the Society.

W. M. BROWNE, Actuary.

UNIVERSAL LIFE ASSURANCE SOCIETY,

1, KING WILLIAM-STREET, LONDON.

Directors—Sir Henry Willock, K.L.S. *Chairman.*
John Stewart, Esq. M.P. *Deputy Chairman.*

Major-Gen. Sir Rd. Armstrong, C.B. K.C.T. & S. | William Kilburn, Esq.
John Bagshaw, Esq. | Francis Macnaghten, Esq.
Augustus Bosanquet, Esq. | Charles Otway Mayne, Esq.
Charles Dashwood Bruce, Esq. | Robert Saunders, Esq.
Ellis Watkin Cunliffe, Esq. | James Duncan Thomson, Esq.
Raikes Currie, Esq. M.P. | Capt. Samuel Thornton, R.N.

Solicitor—William H. Cotterill, Esq.
Physician—George Burrows, M.D.

The principle adopted by the Universal Life Assurance Society of an annual valuation of assets and liabilities, and a division of *three-fourths of the profits* among the assured, is admitted to offer great advantages; especially to those parties who may wish to appropriate their proportion of profit to the reduction of future premiums.

The following table will show the result of the last division of profits, as declared on the 10th of May, 1843, to all persons who had on that day paid six annual premiums:—

Age when Policy was issued.	Date of Policy.	Sum Assured.	Original Premium.	Reduced Annual Premium (for the current year).
20	On or before 10th of May, 1838.	£1,000	£19 6 8	£9 13 4
30		1,000	24 8 4	12 4 2
40		1,000	31 10 0	15 15 0
50		1,000	42 15 0	21 7 6
60		1,000	66 11 8	33 5 10

DAVID JONES, Actuary.

ARGUS LIFE ASSURANCE COMPANY,

20, Throgmorton-street, Bank.

Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.

Thomas Farncomb, Esq. Alderman, *Chairman.*
William Leaf, Esq. *Deputy-Chairman.*

Richard E. Arden, Esq. | Rupert Ingleby, Esq.
William Banbury, Esq. | Thomas Kelly, Esq. Ald.
Edward Bates, Esq. | Jeremiah Pilcher, Esq. Sheriff of London and Middlesex
Thomas Camplin, Esq. | Lewis Pocock, Esq.
James Clift, Esq.
J. Humphery, Esq. Ald. M.P.

Physician—Dr. Jeaffreson, 2, Finsbury-square.
Surgeon—W. Coulson, Esq. 2, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, of King's College.

Advantages of the Argus Life Assurance Company.
Low Rates of Premiums.

In addition to the subscribed Capital of 200,000*l.* the assured have the security of the Company's Income of nearly 60,000*l.* per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.

The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.

Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.

In Assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.

A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.

EDWARD BATES, Resident Director.

A Liberal Commission to Solicitors and Agents.

SUN LIFE ASSURANCE SOCIETY, LONDON.

Managers.

Charles Pole, Esq. *Chairman.*
William Burnie, Esq. *Deputy Chairman.*

Charles Boulton, Esq. | H. Francis Shaw Lefevre, Esq.
Hon. P. Pleydell Bouverie. | Hon. Hugh Lindsay.
James Campbell, jun. Esq. | Charles Littledale, Esq.
Harry Chester, Esq. | Henry Littledale, Esq.
John Cockerell, Esq. | George Warde Norman, Esq.
John Drummond, Esq. | Brice Pearse, Esq.
Charles Bell Ford, Esq. | Charles Richard Pole, Esq.
William R. Hamilton, Esq. | Henry Rich, Esq.
Edward Harman, Esq. | Henry Stuart, Esq. M.P.
Joseph Hoare, Esq. | Claude George Thornton, Esq.
Felix Ladbroke, Esq. | George Smith Thornton, Esq.

JOSHUA MILNE, *Actuary.*

LOW RATES.—PARTICIPATION IN PROFITS.

THE MANAGERS OF THE SUN LIFE OFFICE beg leave to inform the public that their Rates, on Young Lives, are much lower than those of many other Offices, and that the Assured are entitled to a participation in the Profits of this Society.—Persons having Life Interests, such as Clergymen, Medical Men, and others deriving Incomes from their Professions or Trades, also those holding Estates on Lives, will see the advantage of effecting Insurances in the Sun Life Office.

Tables of Rates may be had at the Sun Life Office, in Cornhill, at the Sun Fire Office, in Craig's-court, and at No. 65, Welbeck-street, Cavendish-square, London; also of any of the Agents for the Sun Fire Office.

FAMILY ENDOWMENT SOCIETY, LIFE ASSURANCE and ANNUITY OFFICE,

12, Chatham-place, Blackfriars, London.

Directors.

William Butterworth Bayley, Esq. *Chairman.*
John Fuller, Esq. *Deputy Chairman.*

Henry Bowden, Esq. | Elliot Macnaghten, Esq.
Robert Bruce Chichester, Esq. | William Prinsep, Esq.
Alexander Colvin, Esq. | Joshua Walker, Esq.
Edward Lee, Esq.

Major Willock, K.L.S.

CAPITAL 500,000*l.*

The objects of Life Assurance may be accomplished at this Office on terms as low as is consistent with security.

Examples of Life Assurance for 100*l.*

Age.	30	40	50	60
Annual Premium..	£. s. d. 2 4 7	£. s. d. 3 0 3	£. s. d. 4 4 9	£. s. d. 6 2 5

Endowments for future and existing children, and Annuities of all kinds are granted by this Society.

The usual commission allowed to Solicitors and others, and 5*l.* per cent. extra on the first premium.

JOHN CAZENOVE, Secretary.

LAMPS.—PERRY'S IMPROVED RING-LAMP

(registered per Act 6 and 7 Vict.) possesses the following great and peculiar advantages. *Every part of the interior* can be thoroughly cleansed, so essential to the burning well of either sperm or (especially) common oil. A deficiency of oil can ce ascertained, while the lamp is burning, by merely pushing the ivory studs; and fresh oil supplied, without risk of spilling it over the table, &c. Sold (with or without the pedestals) by Perry & Co. Lamp and Lustre-makers to the Queen, 72, New Bond-street.

THE RESPIRATOR.—WILLIAM JACKSON,

City Agent (Successor to the late George Butler), solicits inspection of his complete assortment of these philosophical and eminently useful Instruments for protecting the Lungs, and affording an easy respiration to those invalids to whom the breathing of cold air is distressing and injurious. A Circular, descriptive of the various kinds and their uses, together with observations on the choice of the Respirator, may be had *gratis* at the City Dispensary Establishment, 93, Cheapside, corner of King-street. Established A.D. 1616.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty, established 139 years. W. & Son have removed to 74, CORNHILL,

where the advantages of the premises will enable them personally to superintend their workmen. An extensive Stock, finished with the utmost care, and at the lowest possible prices consistent with maintaining their reputation supported during so many years for the finest work; consisting of COMPENSATED DUPLEX and LEVER WATCHES, on the principle of their Chronometers, to which Government awarded the prizes three years in succession. The Detached Lever and Horizontal Watches for ladies, of the smallest and most elegant patterns. Marine and Pocket Chronometers with long and accurate rates, also a large selection of second-hand Chronometers and Watches by the most eminent makers. Superior workmen are employed on the premises in the repairing department, for English and foreign work.—Webster & Son, 74, Cornhill.

WOLFF & SON'S CRETA LÆVIS, or PERMANENT DRAWING CHALK, in various Colours.

E. WOLFF & SON beg to apprise Artists and Amateurs that they have, by the introduction of great improvements in their CRETA LÆVIS, enabled it to be used the same as the ordinary pencil; and effects can now be produced equal to water-colour drawings, without the use of water or any other fluid, the various colours blending together with perfect harmony, beauty, and richness. It can be cut to a fine point, and is thus capable of giving a very delicate outline. For sketching from nature, the great advantages resulting from the adoption of the CRETA LÆVIS must be obvious, as without the use of water, palette, brushes, &c. all the various tints can be obtained with a truthfulness that cannot be surpassed,—thus superseding every other method in general use. The drawings may be carried in a portfolio with safety, as, unlike other crayons, they will neither rub off, nor suffer injury by coming in contact with the usual contents of a portfolio. The CRETA LÆVIS will not be affected by heat or change of climate. Specimens may be seen at the Polytechnic Institution, Regent-street; Royal Adelaide Gallery, Strand; and all respectable Stationers, where the CRETA LÆVIS may be had in sets of twelve, eighteen, twenty-four, and thirty-six, with or without boxes.

Instructions for Use.—In order to produce the delicate shades, the chalk must be cut to a fine point, and worked very lightly on the paper, blending the colours until the required tint be obtained. The deep shades merely require a broader point and increased pressure.—Bristol Board, Crayon Paper, or, in fact, any papers with a fine even surface, but not glazed, are well adapted for the CRETA LÆVIS.

WOLFF & SON beg to recommend their newly-invented SKETCHING PENCILS, or Permanent Black Chalks:—B B, very black, for foreground; H B, middle tint; N, neutral tint for distance. These Pencils are peculiarly adapted for sketching heads and landscapes, and are capable of producing a beautiful effect with very little labour. Having an adhesive quality, the drawings may be transmitted without fear of injury.

The method of using the CRETA LÆVIS is taught by Mr. W. H. KEARNEY, Member of the New Water-Colour Society.

*** Wolff & Son are desirous of opening an Agency with respectable Country Booksellers and Stationers for the sale of the above.

Manufactory, 22, Church-street, Spitalfields.

PATENT ELECTRO-PLATING and GILDING.—OLD PLATED GOODS,

as well as every description of METAL ARTICLES, are by this process plated or gilt, and rendered equal to new, including every necessary repair, at a comparatively trifling expense, Iron articles coated with copper and zinc.—ELKINGTON & CO. 45, Moorgate-street, City; and 22, Regent-street, corner of Jermyn-street.

STONE-COLOURED CEMENT.

FELIX AUSTIN, of the New Road, Regent's Park,

begs to inform Architects, Builders, Plasterers, &c. that during the process of manufacturing a very superior composition which has greatly improved his well-known Artificial Stone Ornaments, he has succeeded in making an excellent STONE-COLOURED CEMENT, adapted to building, more especially for facing brick walls and repairing decayed stone work, which he can supply at 2*s.* 6*d.* per bushel, at his Manufactory, near the Thames Tunnel, Rotherhithe.

A. M. PERKINS'S PATENT HOT-WATER APPARATUS, FOR WARMING AND VENTILATING.

FOR the successful operation of the above Plan, references may be made to the British Museum, the Chapels Royal, Whitehall and St. James's, Marlborough House, and Whitley Court, the residences of Her Majesty the Queen Dowager, his Grace the Archbishop of Canterbury's Palaces at Lambeth and Addington; his Grace the Duke of Beaufort's at Badminton; his Grace the Duke of Wellington's at Strathfieldsaye; his Grace the Duke of Hamilton's Palace at Hamilton; the Lord Chancellor's and Vice-Chancellor's Courts at Westminster and Lincoln's Inn; the Insolvent Debtors Court; the Old Bailey Sessions House; School of Design and Tithe Commissioners' Offices, Somerset House; Register of Designs and Record-office; Lincoln's-inn and Gray's-inn Chapels; Inner Temple Hall; County Fire Office; Register Office and Justiciary Courts, Edinburgh; Charles Babbage's, Esq. Dorset-street, Manchester-square; and many other Private Residences, Public Buildings, Churches, Hospitals, Lunatic Asylums, Union Poor Houses, Prisons, Hothouses, Conservatories, &c. &c.

Manufactory, No. 6, Francis-street, Gray's-inn-road.

F. ARNOLD'S INDELIBLE MARKING INK, for Silk, Linen, and Cotton,

which requires no preparation, and is warranted not to injure the finest fabric.

In neat cases, with directions for use.....1*s.* each.
Superior India Rubber Court Plaister, in cases..... 6*d.* and 1*s.*
Purified Violet, Camphor, and Charcoal Tooth-powder, recommended by the faculty, in boxes .. 6*d.* and 1*s.*
Medicated Pomatum, strongly recommended for the nursery and toilet, in pots..... 6*d.*

To be had of every respectable Stationer and Chemist in Town and Country.—Wholesale and Export Warehouse, 12, Curzon-street, May Fair.—Be particular in asking for F. Arnold's, as none other is genuine.

SUPERB NOVELTIES in PAPIER MACHÉ,

at MECHI'S, No. 4, Leadenhall-street, London.—A visit to his establishment will prove that there is not in London another such stock of elegancies. They consist of ladies' tables, envelope-cases, netting-boxes, companions, cabinets, jewel-cases, work-boxes, dressing-cases, tea-caddies, hand and pole screens, card-racks, table inkstands, regency writing-desks, portfolios, playing-card and visiting-card cases, cigar and bottle cases, note and cake baskets; also an assortment of needle-cases, in pearl and tortoise-shell; silver and gold pencil-cases, penholders, and other articles, suitable for presents. Inventor of the patent castellated tooth-brushes.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—

These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 21½, Broad-street, City, and by Slodden & Stocking, 42, High-street, Marylebone; W. Gethem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hanley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 129, Blackfriars-road; C. H. Nicholas, 9, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

LEA & PERRIN'S 'WORCESTERSHIRE SAUCE.'

Prepared from the Recipe of a Nobleman in the County.—The above celebrated Sauce has, from the time of its introduction, been steadily progressing in public favour. Its peculiar piquancy, combined with exquisite flavour, establish it of a character unequalled in sauces. Noblemen and others, of acknowledged gout, pronounce it to be the only good sauce; and for enriching gravies, or as a zest for fish, carries, steaks, game, cold meat, &c., especially unrivalled. As a rapidly-increasing inquiry is now made for it in all parts of the kingdom, the Proprietors beg to state that druggists, grocers, and others may be supplied by their agents—Messrs. Barclay & Sons, Farringdon-street; Mr. J. Harding, 59, King-street, Stepney; Messrs. Metcalfe & Co. 16, Southampton-row; and by the Wholesale Oil and Italian Warehousemen in London, upon the same terms as at their Warehouse at Worcester.—Sold retail, in half-pint bottles, at 1*s.* 6*d.*; pints, 2*s.* 6*d.*; and quarts, 5*s.* each, with the Proprietors' stamp over the cork of every bottle.

THE APERITIVE VASE causes a little water

instantly to procure an evacuation of the bowels without an uneasy sensation; and having been purposely constructed by Dr. Scott to enable even the most nervous lady to use it without the aid or knowledge of any one. It is adopted by the highest personages in the realm, as a very desirable and agreeable substitute for physic. It possesses every requisite for privacy and convenience: you merely fill it from the toilet jug, convey it in your pocket to the closet, place it as directed, press a little ivory knob, and the desired effect instantly follows. Those who are in the habit of drugging their stomachs for the relief of costiveness, indigestion, bilious disorders, liver diseases, &c., would for ever abandon that pernicious practice if they once experienced the comfort of this elegant miniature fountain.—To be procured only at Dr. SCOTT'S Repository, 360, Strand (third door from Exeter Hall); where may be had also SONIFERS, that assist the hearing of deaf persons without the inconvenience of holding anything to the ear. Descriptions sent post free by W. PINK, Superintendent.

THE NURSERY.—The care of the HAIR in Infants and Young Children is, with inexperienced Mothers and Nurses, too little regarded.

No mistake can be more injurious than the supposition that neglect of this particular can continue with impunity. The seeds of strength or weakness are laid in the Nursery; and the majority of the fine flowing ringlets, or bald heads, of after years, are traceable to this early period.

OLDRIDGE'S BALM of COLUMBIA, long celebrated for its genial and invigorating qualities, in promoting and restoring the growth of the Hair, is peculiarly fitted (applied according to the printed directions) for application during the tender years of Infancy and Childhood; and no nursery, where personal advantages are held in any estimation, should be without it. Price 3*s.* 6*d.*, 6*s.*, and 11*s.* per bottle. No other prices are genuine. Ask for Oldridge's Balm, 1, Wellington-street, Strand.

PRESENT-BOOKS for the SEASON—FISHER, SON & CO. Newgate-street, London.

The Favourite Annual—With a Portrait of Mrs. Ellis, &c.
FISHER'S DRAWING ROOM SCRAP BOOK
For 1844. 21s.

"Of the embellishments we need say little more than that, in interest, variety, and beauty, the present selection fully sustains the character of this elegant Annual."—*Patriot.*
"Its career has been undiminished in popularity, owing to the careful elegance adopted for its completion. It is tasteful and discreet in song or tale, and its pictorial embellishments are of a superior order."—*Court Gazette.*

THE JUVENILE SCRAP BOOK for 1844.
By Mrs. ELLIS. 8s.

"We earnestly hope that parents will at this season gratify and delight their children by presenting them with the work. We greatly admire the skill with which Mrs. Ellis pleases while she instructs young readers. Few writers excel so much in rendering attractive the lessons of wisdom."—*Christian Examiner.*

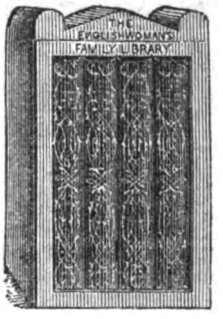
MONTGOMERY'S SACRED GIFT.
Twenty Plates, One Guinea.

CHINA—ITS SCENERY, ARCHITECTURE, SOCIAL HABITS, &c. Thirty-three Plates, elegantly bound, One Guinea.

"The book is a very amusing one; it conveys instruction without wearying, and pleases without misleading the reader; the combined efforts of the artists, and the writer of the accompanying notices, facilitate the acquirement of much that could not be conveyed by the lucubrations of either party unassisted, and bring to every capacity of acquisition a great deal of what every body is anxious to know, but what few will be at the trouble of learning in more elaborate and more diffuse narrations."—*The Times.*

FISHER'S HISTORICAL ILLUSTRATIONS of the BIBLE. 120 Plates, Two Quarto Volumes, morocco, elegant, 5s. 5s.

"The work is exceedingly well got up; the plates are clear, brilliant, and true. It is, in fact, a Commentary on the Holy Writings, comprehensible by all capacities, calculated to assist the biblical student, and to allure youthful readers to prosecute the most important of all studies with ardour and enthusiasm. The work is also an elegant addition to the library."—*The Times.*



BUNYAN'S PILGRIM'S PROGRESS ILLUSTRATED. 16s.; morocco, 21s.

"A splendid edition, with Life of Bunyan, by Conder, which places his character in a new and, as we apprehend, the true light."—*Tait's Magazine.*

BRITISH INSTITUTION, PALL MALL.
NOTICE TO EXHIBITORS.
All PICTURES, and other WORKS of ART, intended for EXHIBITION and SALE the ensuing Season, must be sent for the inspection of the Committee on MONDAY, the 15th, and TUESDAY, the 16th of JANUARY NEXT, between the hours of Ten in the morning and Five in the afternoon; after which time no Picture or other Work of Art will be received. Portraits, Drawings in Water Colours, and Architectural Drawings, are inadmissible. WILLIAM BARNARD, Keeper.
N.B. No Picture will be received for sale that is not *bona fide* the property of the Artist.

GOVERNESS INSTITUTION, 30, Soho-square.—Mrs. HINTON respectfully informs the Nobility, Gentry, and Principals of Schools, that she can introduce highly-respectable Ladies, properly qualified to fill every department in Education. Mrs. H. is much accustomed to tuition, and having resided many years on the Continent, is familiar with the French, Italian, and German Languages.—Schools transferred and recommended in England and on the Continent.—Letters must be free.

A YOUNG GERMAN GENTLEMAN, a Native of Saxony, who has studied at the Universities of Berlin and Paris, and is well experienced in Tuition, wishes to GIVE INSTRUCTION in GERMAN, FRENCH, and all branches of a good Education. References of the highest character will be given.—Direct to T. H. 6, New Union-street, Little Moorfields, City.

INSTRUCTION at PARIS in the FRENCH and GERMAN LANGUAGES.—YOUNG MEN, and PARENTS anxious to obtain for their Sons a knowledge of the FRENCH LANGUAGE, with the best pronunciation, and every care and attention to their moral and religious instruction, are informed that a FRENCH GENTLEMAN, lately a Professor at one of the Royal and other Colleges of France, is desirous of RECEIVING into his Family THREE or FOUR YOUNG MEN, or STUDENTS. Terms, 3000 fr., or 80*l.* a year, which includes every expense, except washing.
Several Courses of Lectures are open to the Students without additional cost; but any particular study or course can be followed on payment. Gymnastic and Manual Exercises of every description. Also Fencing and Riding Lessons can be had if required.
The Professor, Monsieur BLED DE BRAINE, will be happy to give every information to persons residing in Paris, at his residence, No. 21, Rue Gaillon; and he is permitted to refer parents and others resident in England for further information to a gentleman, whose son is now under his care, and who may be addressed as D., *Gardeners' Chronicle* Office, 3, Charles-street, Covent-garden.

EDUCATION.—A PHYSICIAN, who has paid much attention to the subject of Education, and resides in one of the most salubrious, though retired, villages on the Hampshire Coast, RECEIVES AS BOARDERS FROM THREE TO SIX YOUNG GENTLEMEN, whose health may render constant medical care, or a change of air and sea-bathing, desirable; and instructs them in the usual branches of a liberal Education, including the Latin, Greek, French, and German Languages. Terms, including sea-bathing, from 60 to 80 guineas per annum, according to age, &c. Vacations, 5 weeks at Christmas and at Midsummer. Good references given and required.—Direct E. S., M.D., Lymington, Hants.

MEDICAL EDUCATION.—HOUSE PUPIL.—Mr. DERMOTT, who has for upwards of twenty years been an authorized Lecturer on Anatomy and Surgery, has a VACANCY FOR A HOUSE PUPIL, whose professional education and regularity of conduct will be superintended with the most scrupulous care, and methodized by a domestic collegiate system. The advantage of such an arrangement must be self-evident, when it is considered that the inducements to dissipation and irregularity of habits which the metropolis or any other large town holds out, have entailed the ruin of many Medical Students, and even, in a pecuniary sense, that of their families.
CHARLOTTE-STREET SCHOOL OF MEDICINE.—Perpetual to all the Lectures necessary for College and Hall, together with Three Years' Hospital Practice, Surgical and Medical, Fifty-five Pounds, *whereby more than one-half the expense of Medical Education is saved.*
Apply to Mr. Dermott, Charlotte-street School of Medicine, 15, Charlotte-street, Bloomsbury.

ART-UNION of LONDON.—4, Trafalgar-square, Charing-cross. Established 1837.
President.
His Royal Highness the Duke of CAMBRIDGE.
Vice-President.
The Most Noble the Marquis of NORTHAMPTON, P.R.S.
The Subscribers of the current year will receive for each guinea paid, besides the chance of obtaining a valuable Work of Art, an impression of a Line Engraving, by Mr. E. Goodall, from the Picture by Clarkson Stanfield, R.A., 'CASTELLO D'ISCHIA;' and, *in addition to this*, a series of Twenty-two Designs in Outline, (size, 12 inches by 8,) made expressly for the Society by Mr. H. C. Selous, and engraved by Mr. Henry Moses, illustrative of the 'Pilgrim's Progress.' Several of the Outlines are already engraved, and may be seen at the Office: an EARLY Subscription is earnestly solicited, to enable the Committee to make arrangements for their immediate distribution.
A finished Proof of the Engraving due to the Subscribers of the year 1843, 'RAFFAELLE AND THE FORNARINA,' engraved by Mr. L. Stocks, after Sir A. Callcott, R.A., may be seen at the Office. GEORGE GODWIN, F.R.S. F.S.A. } Hon. Secs.
LEWIS POCOCK, F.S.A. }
November, 1843.

GRIFFIN'S CHEMICAL APPARATUS.—TAYLOR & WALTON, 28, Upper Gower-street, have on Sale a Collection of IMPROVED CHEMICAL APPARATUS, from the Stock of Messrs. Griffin & Co. Glasgow.
*** A Descriptive Catalogue of Messrs. Griffin & Co.'s entire Stock, price 1*s.* 6*d.*

GERMAN LESSONS by POST.—LUDWIG H. GELLERT, L.L.D., has the honour to acquaint his former correspondents, and those ladies and gentlemen who are desirous of improving their knowledge of German during their absence from town, that he has returned to London, and will continue to CORRECT GERMAN TRANSLATIONS, letters, and other compositions, as well as explain by letter those difficult passages which they may meet with in their readings. Dr. Gellert having by many years' experience in teaching, both at Dresden at Karlsbad, throughly mastered Professor Klauer-Klattowski's simplified system of teaching languages, is thereby enabled to refer each of his grammatical corrections to the number of the precise rule in Professor Klauer's German Syn. Grammar, which he will transmit to his correspondents free of postage at the cost price of five shillings. Dr. Gellert's terms are five shillings for every hour employed with his correspondents, whom he requests to use a pseudonym if desirous of their real names not being known.—38, Bruton-street, Berkeley-square.

TO AMATEURS OF CURIOSITIES.
FOR SALE.—The broad SILVER STAR that Louis XVI. King of France, wore as a decoration of the Royal Order of the *Saint-Esprit*.
Also three AUTOGRAPHS, viz., The first, of Henri IV. King of France, consisting of a Patent, signed with his own hand; the second, of Louis XIV. King of France, consisting of a Warrant, signed likewise with his own hand; and the third, of Fléchier, Bishop of Nimes, consisting of a Note entirely of his own handwriting, with his Signature. Unquestionable proofs of the authenticity of these precious relics will be given.—Address, by letter, to Mons. l'Abbé D., 14, Albany-street, Regent's-park.

HORNE & CO.'S PUBLIC SUBSCRIPTION LIBRARY, No. 105, CHEAPSIDE, London, consisting of a Collection of upwards of 50,000 Volumes of Works, by the best Authors, in the various departments of Literature.
Terms of Subscription.—Subscribers of 5*l.* 5*s.* per annum; 3*l.* 3*s.* the half year; or 1*l.* 14*s.* the quarter, are entitled to 18 vols. at a time, in Town, or 24 vols. in the Country.—4*l.* 4*s.* per annum; 2*l.* 10*s.* the half year; or 1*l.* 8*s.* the quarter, 12 vols. in Town, 16 in the Country.—3*l.* 3*s.* per annum; 1*l.* 16*s.* the half year; or 1*l.* 1*s.* the quarter, 8 vols. in Town, 12 in the Country.—2*l.* 2*s.* per annum; 1*l.* 6*s.* the half year; or 15*s.* the quarter, 4 vols. in Town, 6 in the Country.—The New Publications are added to the Library as they issue from the press; from which Subscribers may select one-half their complements.
BOOK SOCIETIES, or Families desirous of entering into a joint subscription, can be supplied with any number of books, entirely new, and of their own selection, whether in the Library Catalogue or not, upon the following terms:—If 30 volumes be required constantly in circulation among the members, 12*l.* 12*s.* per annum. And if a greater or less number be required, the same rate in proportion. The Books to be exchanged at the time and in the way best suited to the convenience of the members; the Society paying carriage to and from London.
*** Subscriptions to be paid in advance.

CORPORATION OF THE LONDON ASSURANCE,
Established by Royal Charter, A.D. 1720,
Offices, 19, Birchin-lane, Cornhill, and 10, Regent-street.
NOTICE is hereby given to all persons who have paid to this Corporation five years' premium on assurances effected on lives under the plan entitling the assured to a reduction of premium, commenced in 1831, and of which the details are already before the public, that on the 1st of January, 1844, when their next annual premium will become due, they will be entitled to an abatement of 31*l.* 1*s.* 11*d.* per cent. thereon.
Fire assurances may be effected with this Corporation at the most moderate rates.
Marine assurances may be made with this Corporation at the current premiums of the day.
Attendance daily, from 10 till 4, at both Offices, where prospectuses and every information may be obtained.
JOHN LAURENCE, Sec.

22, Ludgate-street, November 20, 1843.

THE PICTORIAL SUNDAY-BOOK. To be completed in Thirteen Monthly Parts, at Eighteenpence each, with Fifteen Hundred Woodcuts, and Twenty Coloured Maps, forming a splendid Folio Volume. Published also in Weekly Numbers at Threepence, with a Monthly Supplement at Sixpence.
There are intervals in the devotional duties of the Lord's Day when sacred subjects may be fitly offered to the mind, and especially to the mind of the young, in an attractive form. 'The Pictorial Bible' has thus been recommended by the most zealous ministers of religion as a proper Sunday-Book, calculated to "make the Word of God an interesting study for youth." The publication now submitted to Christian families is intended to present, at the very cheapest rate, a SERIES OF ENGRAVINGS illustrative of the Bible History, the Prophecies, the Psalms, the Life of our Saviour, and the Acts of his Apostles; exhibiting the scenes of the great events recorded in Scripture, the Customs of the Jews, the Natural History of the Holy Land, and the Antiquities which throw a light upon the Sacred Writings. With these are united some of the more striking and impressive compositions of the great Painters, and original designs; each illustrating the historical events of the Old and New Testament, and such portions of the New Testament as form the Gospels which the Church Ritual selects for the Sundays, Fasts, and Festivals of the year. These Pictorial Illustrations are connected with a COURSE OF SUNDAY READING, which, avoiding all matters of controversy, endeavours to present, in the most instructive and engaging form, a body of Scriptural Narrative and Explanation, continuing from number to number; each number forming, as it is judged, a fitting portion for a Sunday's leisure. The publishers have intrusted this important department of the undertaking to a gentleman whose labours in a similar field have attained the highest reputation, and whose responsibility will insure that the work shall be conducted in a spirit of sincere piety, and of anxious diligence, striving at extensive usefulness.
*** The FIRST NUMBER will appear on Saturday, the 9th of December, and the FIRST PART on the 30th of December.
London: Charles Knight & Co. 22, Ludgate-street.

CHOICE AND VALUABLE SECOND-HAND BOOKS.

TO SCIENTIFIC INSTITUTIONS, SCHOOLS, THEATRES, EXHIBITIONS, LECTURERS, &c. &c.

TO LET, by the Evening, with attendance, a complete and splendid APPARATUS for the EXHIBITION of DISSOLVING VIEWS, comprising a large and powerful OXY-HYDROGEN MICROSCOPE, with two Lanterns and three distinct series of Paintings. The whole provided at an hour's notice, if required.—Apply to Mr. F. J. Gould, 151, Strand; or 9, Russell-court, Catherine-street.

N.B. An OXY-HYDROGEN MICROSCOPE to be DISPOSED OF.

PENINSULAR and ORIENTAL STEAM-NAVIGATION COMPANY.—At the THIRD ANNUAL GENERAL MEETING of this Company, held 29th of November, at their offices in St. Mary-Axe,

Sir JOHN CAMPBELL, K.C.H., in the Chair,

The following resolutions were agreed to;—

It was moved, seconded, and unanimously carried—

1. That the Report now read be received, printed, and circulated amongst the proprietors.

2. That a Dividend of 3½ per cent., recommended in the report now read, be payable on or after the 20th December, 1843, between the hours of twelve and three o'clock on each day, to such proprietors as are duly qualified to receive the same.

3. That Sir John Campbell, K.C.H., and James Hartley, Esq., be re-elected Directors of this Company, in conformity with the provisions of the deed of settlement.

4. That the Honourable John T. Leslie Melville, and Jameson Hunter, Esq., be re-elected the Auditors for this Company for the ensuing two years.

5. That the Thanks of this Meeting be tendered to the three Managing Directors, for the zeal, ability, and persevering exertions, by which they have promoted the interests of this Company.

6. That the remuneration to the Directors be fixed at Two Guineas for each day's attendance for the future.

7. A Vote of Thanks and Confidence was then moved to the Chairman, which was carried unanimously, and the meeting adjourned.

DESTITUTION IN THE METROPOLIS.—ROYAL FREE HOSPITAL for the DESTITUTE SICK and DISEASED, Gray's-inn-road (late Greville-street); founded A.D. 1828. *Patron*—The QUEEN.

This Hospital, which is entirely devoted to destitution in its most appalling and pitiable form, viz., accompanied by sickness and disease, is now established on a scale of sufficient magnitude, that with proper support it may be rendered capable of admitting into its wards all the "casual sick" of this great metropolis. It requires but the funds in order to have 500 beds immediately available for the reception of these, the most wretched of our fellow-creatures. Moreover, it gratuitously affords medical advice and medicine to more, on the average, than 1,800 out-patients a-week.

It is wholly supported by voluntary subscription, has no funded property of its own, nor any other income than that which is contributed by the philanthropic portion of the community. To these it is most earnestly recommended by the Committee at this period of extreme destitution and consequent sickness and peril of life. Its doors are daily thronged with the most miserable objects, and so great has been the demand upon its resources in consequence during the whole summer, that it has been compelled to borrow to a large amount from the fund subscribed towards the new building to defray the current expenses.

Contributions will be kindly received by Messrs. Coutts & Co.; Messrs. Drummonds & Co.; Messrs. Herries & Co.; Messrs. Smith, Payne & Smiths; Messrs. Glyn & Co.; Messrs. Jones, Loyd & Co.; Messrs. Barclay, Bevan & Co.; Messrs. Denison & Co.; Messrs. Williams, Deacon & Co.; Messrs. Prescott & Co.; Messrs. Ransom & Co.; Messrs. Overend, Gurney & Co.; Messrs. Nisbet & Co. Berners-street; and at the Secretary's Office, by the Rev. R. C. PACKMAN, Sec.

Cast-off apparel, male or female, will be gratefully acknowledged.

IMPORTANT TO BOOK-BUYERS.

JOHN RUSSELL SMITH has this day published PART I. for 1844, (112 pages) of his CATALOGUE of Choice, Useful, and Curious Books on the Fine Arts, Topography, Heraldry, Numismatics, Philology, Natural History, Voyages and Travels, &c. &c. at very moderate prices. Sent *gratis* in London, and by post into the Country, on receipt of six postage labels to frank it.

No. 4, Old Compton-street, Soho, London.

CHEAP MODERN PUBLICATIONS, being the Duplicates (in every department of Literature) of ANDREWS' CIRCULATING LIBRARY, 167, New Bond-street. The Catalogue is now ready for delivery *gratis*. It is printed on a large sheet of paper, and sent postage free. These books are withdrawn from the Library to make room for the multiplicity of New Publications, which are supplied in unlimited numbers to the Subscribers of the Library. Terms of Subscription, &c. to be had on application, or forwarded to any part of the country.—N.B. Persons desirous of establishing Book-Clubs, or Circulating Libraries, will find the above worthy their attention.—ANDREWS' LIBRARY, 167, NEW BOND-STREET, adjoining the Clarendon Hotel.

Now ready, price 4*s.* 6*d.*

RURAL CHEMISTRY.

By EDWARD SOLLY, Esq. Jun., F.R.S.

Experimental Chemist to the Horticultural Society of London, Hon. Mem. of the Royal Agricultural Society, and Lecturer on Chemistry, at the Royal Institution, &c. &c.

Extracts from the Introduction:—

"A knowledge of the chemical composition of soils and the various substances employed as manures enables us to comprehend the mode in which the latter act; and a knowledge of the nature of those substances which plants require, points out the best and most economical methods of restoring to the soil, by manures, those substances which plants remove from it."

"If the farmer knows what it is that gives the fertilizing powers to manure, and is aware of the nature of those substances, he will soon learn the best method of preserving and using them; he will then understand how to make the most of the various sources of manure at his disposal, and he will be enabled readily to save much, that, for the want of such knowledge, would otherwise be lost."

London; 3, Charles-street, Covent-garden; and may be ordered of all Booksellers.

RUTHERFORD'S HUTTON'S MATHEMATICS.

THE WORKS of JOHN SKELTON, Poet Laureate in the Reigns of Henry VII. and Henry VIII. Now first accurately printed from existing Manuscripts, and the Ancient Editions, with Notes and a Glossary.

By the Rev. A. DYCE.

Shakespeare's Library; a Collection of the Romances, Novels, Poems, and Histories used by Shakespeare, as the foundation of his Dramas. Now first collected, and accurately edited from the Original Editions, with Introductory Notices. By J. P. Collier, Esq. F.S.A. 2 vols. 8vo. cloth boards, 1*l.* 1*s.*

T. Rodd, 9, Great Newport-street.

THE WATER CURE.

Just published, fcap. 8vo. price 4*s.* by S. Highley, 32, Fleet-street, London,

THE WATER CURE, as practised by V. PRIESSNITZ, with illustrative Cases drawn from the Author's Observations at Gräfenberg, and his own practice at Prestbury, near Cheltenham. To which are added, Drawings of Gräfenberg, a Phrenological Sketch of M. Priessnitz, and a Notice of Dypsopathy, or the Thirst Cure, as practised by M. Schrott, of Lindiviese.

By RICHARD BEAMISH, Esq. F.R.S. &c.

A report having been, with some industry, circulated, that Albert Priessnitz would not be permitted to leave Gräfenberg, Mr. Beamish begs to state, that the said Albert Priessnitz is now giving ample testimony of his practical hydropathic knowledge at Prestbury.

NEW GERMAN AND ENGLISH DICTIONARY.

Now ready, 12mo. 766 pages, price 9*s.* bound and lettered,

AN ABRIDGEMENT of FLUGEL'S complete DICTIONARY of the GERMAN and ENGLISH LANGUAGES. For the use of Schools and Travellers. English-German and German-English. Abridged especially for the English Student. By C. A. FEILING and JOHN OXENFORD.

The great success which has attended the publication of the English edition of Flugel's Dictionary has induced the proprietors to undertake the present abridgement of it, which they trust will be found adapted to the wants of the large number of persons who study German chiefly that they may be enabled to travel on the Continent without inconvenience, as well as of younger students, for whom the larger work may be found too expensive.

London: Whittaker & Co.; Dulau & Co.; and D. Nutt.

Baker-street, December, 1843.

Just published, in 1 vol. 12mo. price 6*s.* 6*d.* cloth boards,

Just published, price 6d.

THE PRINCES' ALMANACK for 1844, bound in an extra embossed novel cover, containing Four Illustrations—The Prince of Wales, the Count of Paris, the Duke of Brabant, the Thames Tunnel, with appropriate Original Poetry, and thirty-two pages of Useful and Interesting Information.

London: D. Cahn, 19, Garnault-place, Myddelton-square; and W. Griffin, 25, Change-alley, Cornhill.

Published by Robert Baldwin, 47, Paternoster-row.

THE YOUNG MOTHER.

In 12mo. price 6s. cloth, a New Edition of

1. A GRANDMOTHER'S ADVICE to YOUNG MOTHERS, on the Physical Education of Children. By M. J. late Countess of MOUNTCASHELL.

*** "This book is the production of many years' experience, and much reflection; and the Author trusts that it will be of use to those for whom it is designed—the anxious mother, the attentive governess, and the careful nurse."—*Preface.*

FLOWERS IN CONSTANT BLOOM.

In 12mo. price 5s. cloth lettered,

2. Guide to the Conservatory; being a concise Treatise on the Management of the Hot-house and Green-house; the Forcing of Bulbs, Shrubs, &c.: and the Best Mode of Keeping a Succession of Bloom through every month of the year; exemplified in a select list of the most admirable plants of the present day, under the arrangement both of Jussieu and Linnæus—including their native country, propagation, and the soil adapted to each. By Richard Bainbridge, Flower Gardener to the Right Hon. Lord Wenlock.

*** The peculiar characteristic of this work is the means of obtaining a constant and large supply of flowers. It includes a very extensive List of Orchidaceæ, with their cultivation as pursued by the most eminent practitioners.

FRENCH GRAMMAR FOR PRIVATE TUITION.

In 8vo. price 12s. in cloth, the Ninth Edition of

3. A Guide to the French Language, especially devised for Persons who wish to Study the Elements of that Language Without the Assistance of a Teacher. By J. J. P. Le Brethon.

4. A Key to the Exercises in the above Work, by means of which any person of a mature understanding may acquire the elements of the French language practically, as surely as if a professed teacher were sitting by his side; and, with a very superficial knowledge of it, may teach it to others. Directions are given in the Key to parents not accustomed to teach languages, who wish to instruct their children, with the assistance of this book, how they must proceed. Price 8s.

5. The World in a Pocket-Book; or, Universal Popular Statistics; embracing the Commerce, Agriculture, Revenue, Government, Manufactures, Population, Army, Navy, Religions, Press, Geography, History, Remarkable Features and Events, Navigation, Inventions, Discoveries, and Genius, of Every Nation on the Globe; including an ample General Synopsis of the United States, &c. &c. By W. Crump. Price 4s.

8, New Burlington-street, Dec. 2, 1843.

MR. BENTLEY WILL PUBLISH DURING THE PRESENT MONTH THE FOLLOWING NEW WORKS:—

REVIEWS

Memoirs of Admiral the Earl of St. Vincent. By Jedediah Stephens Tucker, Esq. 2 vols. Bentley.

PERHAPS to no officer, not even excepting Nelson, is the British Navy and the Country under such important obligations as to the Earl of St. Vincent. Though popularly known only as the commander-in-chief who gained a great victory off the cape whence he derived his title, over a very superior Spanish fleet, in February 1797, yet that brilliant event formed but a small part of the service he rendered to his profession, or of the benefits he conferred upon the nation. It is to Earl St. Vincent, pre-eminently, that the Navy owes that high state of efficiency and discipline which contributed to so many conquests, and rendered it superior to the Marine of the rest of the world. But it was as the uncompromising detector of abuses in dockyards and other naval establishments, and by the reforms he introduced when First Lord of the Admiralty, that he mostly benefited that service, and which induced Mr. Thomas Grenville, many years afterwards, to write to him, "You got a great name for a foreign naval victory, but, and as I always assert, you had no justice done you for your domestic naval victories." The life of such an officer, written with a full knowledge of facts, with access to public and private documents, and with impartiality and judgment, would be an invaluable present to the profession he adorned, and an acceptable addition to general literature. Our readers are aware that this is not the first account of Earl St. Vincent's career, and that his Life was written, in two volumes, by the late Capt. Edward Pelham Brenton.

The present biography appears under every circumstance which could give it value. Mr. Tucker is the son of Lord St. Vincent's private secretary and confidential friend, and he has also been assisted by the papers, and recollections, of his Lordship's family. But we fear the author himself has brought few other qualifications for his work—evidently a labour of love—than generous and grateful admiration of his hero. To literary composition he seems unaccustomed, for his style is so involved and verbose as to be sometimes almost unintelligible; and in minute details he is occasionally inaccurate. He speaks with becoming diffidence of the incompetency of a civilian to write the life of a naval commander; but there are other requisites for a biographer besides professional knowledge, and we apprehend that *the* life of St. Vincent, which will form a manual for aspirants for naval renown, remains to be written.

The volumes are, nevertheless, extremely valuable for the numerous letters they contain, and which, fortunately, render Earl St. Vincent his own biographer, while they exhibit the mind, feelings, and powers, of some of the most eminent of his contemporaries, with nearly the same clearness as his own. Some of the personal anecdotes, which the author's father has preserved of his patron, are amusing, and afford more insight into the real nature of a man whose official exterior inspired awe, and whom every idle, incapable, and negligent officer equally feared and disliked. It might have been wished that a more judicious selection had been made from the documents in Mr. Tucker's hands, for many of the letters are on mere matters of routine, and neither afford professional information, nor illustrate, in the least degree, their writer's character. This is a sin of redundancy; but there are numerous others of St. Vincent's letters, scattered in a variety of publications (especially his remarkable correspondence with Sir John Orde on a point of discipline), which ought to have been inserted in these volumes.

Lord St. Vincent was the second son of Swynfyn Jervis, Esq., a gentleman of ancient family in Staffordshire, and was born on the 23rd January, 1734-5:—

"His ancestral families (says Mr. Tucker) may be but briefly noticed, and merely to show that the sturdy vigour and manliness with which he was eminently gifted, characterised them also, and was almost a natural source of his extraction; for his must be a name which it would be least permissible to try to emblazon with lineal splendour, who, in reply to a request for such information, and that for the avowed purpose of Memoirs of himself, wrote: "They were all highly respectable, but *et genus et proavos*, &c.—nearly all the Latin I now recollect—always struck my ear as the sound maxim for officers and statesmen."

Young Jervis was intended for the law; but the appointment of his father to the auditorship of Greenwich Hospital in 1747, where he took up his residence, is supposed to have directed the boy's mind to the Navy. His desire to go to sea being resisted, he ran away from school; but the family finding his resolution not to be shaken, placed him as a midshipman in January 1748. The hardy independence of character and reliance on himself for which he was conspicuous throughout life, showed themselves very early. Having drawn upon his father for 20*l.*, while serving in the West Indies, and the bill being dishonoured, he underwent the most severe privations—"sold all his bedding, and slept on the bare deck, made, mended, and washed his own clothes"—to pay it, and never afterwards obtained a sixpence from his family. To this fact he alluded while First Lord of the Admiralty, in 1802, in answer to an application to him to provide for a young officer who had got into debt:—"Having fought my way up to where I now stand, without the smallest pecuniary aid from any one, even when I was a Mid, I cannot possibly entertain an opinion that officers, whose half-pay is considerably more than formerly, cannot practise the same necessary economy which marked the character of, my dear Sir, yours, &c. St. Vincent."

Jervis obtained a lieutenancy in 1755, and was flag lieutenant to Sir Charles Saunders in the expedition to Quebec in 1759, when Wolfe (erroneously called *Sir* James Wolfe, with whom Jervis had been to school,) fell. Being in the same ship, the general and lieutenant renewed their friendship, and—

"On the night previous to the battle, after all the orders for the assault were given, Sir James Wolfe requested a private interview with his friend; at which, saying that he had the strongest presentiment that he should be killed in the fight of the morrow, but he was sure he should die on the field of glory, Sir James unbuttoned his waistcoat, and taking from his bosom the miniature of a young lady, with whose heart his own 'blended,' he delivered it to Commander Jervis, intreating, that if the foreboding came to pass, he would himself return it to her on his arrival in England. Wolfe's presages were too completely fulfilled, and Commander Jervis had the most painful duty of delivering the pledge to Miss Lowther."

Soon after his promotion he took command of the *Albany* sloop in Plymouth, to proceed with dispatches to America; but the crew having refused to go on so distant a voyage, the young commander gave proofs of that firmness in subduing mutiny which never deserted him. He obtained post rank in October 1761, and remained for six years on half-pay. In February 1769 he was sent to the Mediterranean, in the *Alarm* frigate, and being in Genoa, two Tunisian slaves jumped into his boat, clasped the colours, and claimed their freedom. They were, however, taken out of the boat by the Genoese; but, in consequence of his spirited remonstrance, were restored to him, with an apology for the insult offered to the English flag. The act seems to have been disapproved of by the Admiralty, as he says, "I had an opportunity of carrying the British flag in relation to two Turkish slaves as high as Blake had ever done, for which I am *publicly* censured, though I hope we have too much virtue left, for me not to be justified in *private*."

This circumstance would have been scarcely worth noticing here, had not Mr. Tucker said, "it so unquestionably bears upon the line of conduct exhibited by St. Vincent in the House of Lords, in speaking against the abolition of the Slave Trade;" but he forgets that Captain Jervis did not insist upon the slaves being given up to him because he hated slavery, but because the English flag had been insulted by their recapture. In March, 1770, his ship was nearly wrecked at Marseilles, and in the measures he adopted for her restoration he showed great professional ability and energy of character. Of this event he said, in a letter to his father:—

"I have had a severe lesson of submission to the Divine Will; gained some experience, and, I have the vanity to think, lost no reputation, although other loss I have sustained enough; but that is not to be named. * * I have received the most satisfactory letters from the Admiralty, public and private: a glorious action in the midst of a war could not be more applauded than the gallantry of the officers and crew for theirs."

To his sister, Mrs. Ricketts, he thus touchingly expressed himself:—

"Thanks, my dear Sister, for your cordial of a letter. The only vacancy I felt in the most arduous task I ever yet saw, was the want of your remembrance. I have it now, and am happy—but worn down to the merest skeleton you ever saw."

He was soon after appointed to convey the Duke of Gloucester from port to port in the Mediterranean, and being paid off on his return to England, he proceeded to the Continent, and visited the principal arsenals of Europe, with the view of obtaining information which might be turned to account in future wars. In 1778 he commanded the *Foudroyant*, 84, under Admiral Keppel, and having been present in the drawn battle with the French off Ushant, in July of that year, became an important witness for his chief on the court martial instituted by Sir Hugh Palliser, his evidence on this occasion filling seventeen of Mr. Tucker's pages.

In April, 1782, Captain Jervis fought one of the most remarkable actions in the naval annals, and justly acquired the highest reputation for bravery and skill, by the capture of the French line-of-battle ship *Pégase*, after an engagement of three quarters of an hour, without losing a single life, and having only five men wounded. We shall give the author's short description of the affair, because it shows how early professional tact sometimes displays itself, and, what is more rare, sufficient greatness of mind in a superior officer, to admit and take advantage of the suggestion of a mere boy. The Mr. Richard Bowen there mentioned, had been directed by Jervis to keep sight of the chace during the night, which he executed so much to his Captain's satisfaction, as to induce him to exclaim, "That's right, Bowen, do you only keep sight of her, and rely upon it I will never lose sight of you;" a promise he fulfilled, until Bowen gallantly fell a post captain at Teneriffe, where Nelson lost his arm:—

"The two ships were running at the rate of eleven knots, with the wind on the starboard quarter, the enemy being rather on the weather bow of the Foudroyant. When they were nearly within hail of each other, and before a gun had been fired, the officer on the Foudroyant's forecastle called out, 'She has put her helm up to rake us, sir.' On that, Capt. Jervis's

Digitized by Google

first impulse was, to put the Foudroyant's helm a-starboard, and deliver her broadside from her starboard guns; but it had already occurred to young Bowen that the contrary manœuvre would enable the Foudroyant to give the first fire, and instead of being raked, to rake her opponent; and so forcibly did this strike the boy, that he could not help exclaiming, 'Then if we put our helm to port, we shall rake her.' Captain Jervis immediately caught the idea; and feeling the force of it, 'You are right, Bowen,' he said, conceding the credit to whom it was due; and giving his orders accordingly, thus commenced his action. As the enemy hauled up, Captain Jervis clewed up his main-sail, took in his studding-sails, and passing under his opponent's stern at the distance of about twenty fathoms, continued his raking fire. It seemed that carnage threw the chase into confusion; for she then ran right before the wind, her sails and everything being in the greatest disorder. Perceiving this, Capt. Jervis determined on boarding, and laid the Foudroyant on the enemy's larboard side, a little abaft the main-mast. Headed by young Bowen, his boarders were soon in possession of the enemy's deck, struck her colours with cheers, and thus, at one A. M., the action having lasted three quarters of an hour, ceased."

A nephew of Captain Jervis, the son of his favourite sister, Mrs. Ricketts, was on his first cruise with his uncle on that occasion, and there is so much simplicity in the boy's letter to his mother, that we are tempted to insert it:—

"I have the happiness to inform you we have taken a seventyfour-gun ship from the French, after 50 minutes' action. We had not one man killed, only five wounded. My uncle has got a splinter, which has made both his eyes black, but he is very well; it is upon the top of his nose; he says you must write to Meaford, at Spithead, to-morrow. The ship's name is Pégase, seven months old, the captain an old acquaintance of my uncle's. We have taken about sixteen or seventeen transports out of twenty. We engaged till one in the morning; and shall most likely be with you soon.—Yours, affectionately,

H. Ricketts.

"P.S.—I assure you, upon my word, he is not very bad. H. R."

Mr. Tucker says, that for this exploit, "the red ribbon and a baronetcy were immediately conferred," a singular inaccuracy, for Sir John Jervis, neither then nor at any other period was created a *baronet*. That the *Foudroyant* was a model of discipline, and her commander stern and inflexible on all points of duty, we can readily believe; but the following statement will, we think, surprise naval officers of the present day:—

"Not a few are the very old officers whom the writer of these memoirs has had the honour to meet, who recollected her, and who took delight in talking about how 'great a thing it was then thought to go on board the Foudroyant;' with what awe they used to approach Sir John Jervis! what a stern officer he was! what an object of curiosity the ship was to all in the port! but especially to the officer, who when any important piece of duty was going on (let the young midshipmen mark this) used then to make interest to be admitted on board, for the express purpose of learning from the best model of the day!"

That this rigid disciplinarian's heart was always influenced by kindness and humanity, will abundantly appear from many of our extracts. Among the letters of this class is one from Dr. Huntingford, afterwards Bishop of Gloucester, commencing thus:—

"The kind, generous, and humane behaviour which you have been pleased to show to my unhappy brother, demands my earliest acknowledgments, and most sincere thanks. You have relieved from bitter anxiety an afflicted family; you have rescued from an abode of distress and despair a young man, born to good prospects, liberally educated, and brought up to a genteel profession. For such instances of benevolence may you reap every blessing, which minds sensibly affected with your goodness can possibly conceive or wish for you."

To Mr. Jackson, the Under Secretary of the Admiralty, Sir John Jervis wrote on the 9th August, 1778:—

"You must allow me to interest your humanity in favour of poor Spicer, who overwhelmed with dropsy, asthma, and a large family, and with nothing but his pay to support him under these afflictions, is appointed to the —— under a mean man, and very likely to go to East India. The letter he writes to the Board, desiring to be excused from his appointment, is dictated by me. Admiral Keppel has already offered to take Boger into the Victory, if you promote as you ought to do, out of her; and when that takes place, I shall write for Spicer to be first-lieutenant of the Foudroyant, with intention to nurse him and keep him clear of all expense."

But poverty and distress, more especially when found in the son of an old officer, were ever irresistible claims to his patronage and assistance. The impartiality of his conduct towards his relations, and the treatment they were to expect if placed under his command, are strikingly exhibited in his answer to his sister's letter about one of her sons:—

"I forgot to answer the passage in your letter relative to Edward, which I now do briefly thus: His choice of our profession must be entirely his own: and he should be made to understand, that I do not encourage it, by any means. That he must lie in the berth with the other midshipmen; live as they do; and have no other distinction whatsoever; for the first year, he must rise at break of day; and apply closely to his studies, and to his seamanship; be very subordinate and respectful to all in authority over him, and never repine at the hardships and impositions he is bound to bear in common with others. The life is a very rigorous one, and what few boys, educated as he has been, can bear. If he chooses to embark on these terms, I shall be ready to receive him; but if he disgraces me and his family afterwards, by turning his back, I shall bury in total oblivion his alliance of blood, (which is no tie to me when unaccompanied by manly virtue,) and have no other feeling about him than I should have for any other indifferent person entrusted to my care, who acted in such a manner, as not to merit my esteem and regard. I forgot to mention, that after the first year, in which I expect he will become master of the theory of navigation, he must watch and do his duty with punctuality and alertness; and at least with as much precision as the best midshipman in the ship,—for I shall always exact *more* from a very near relative than from those I receive on recommendation. Henry is gone to his business again, but he has been rallied about his illness, and the plan to let the ship sail without him, as well as for carrying his new bought sword, unknown to me (I mean the purchase) to Longwood, as the officers tell him, to swagger before the shepherd-boys, and to cut the rabbits' heads off at their holes. He takes it all as I could wish him to do. I must beg you will never order him any clothes without my participation, for I shall make him wear his worst jacket through the winter; he must not, on any account be more expensive in dress or pocket money, than the others."

Sir John Jervis having become an admiral, was allowed to recommend a midshipman for promotion on striking his flag, and though surrounded by high-born candidates, he selected the friendless but well-conducted son of a poor lieutenant for advancement, and the admiral's reply to his letter of gratitude should be fixed in the memory of the chiefs of both services:—

"I named you for the lieutenant I was allowed to promote, because you had merited the good opinion of your superiors, and that you were the son of an old officer and worthy man, in no great affluence. A steady perseverance in that conduct which has now caused you to be thus distinguished, is the most likely means to carry you forward in your profession; for I trust that other officers of my rank will observe the maxim I do, to prefer the son of a brother officer, *when deserving*, before any other."

Though Jervis sought connubial happiness in 1783, he always considered marriage as the destruction of an officer. His sentiments on this subject were expressed on hoisting the flag of Vice-Admiral in 1793, when he chose his officers from his old followers:—

"The appointment of another previous follower, Mr. Bayntun, had been preceded by a trifle, which even now it is difficult to recollect without a smile. On the first report of Sir John Jervis being about to hoist his flag, Mr. Bayntun applied to rejoin him; and daily watching the post for his reply, one morning he was astounded that it should be this rather chuffish note:—Sir, You having thought fit to take to yourself a wife, are to look for no further attentions from Your humble servant, J. Jervis. Now, marriage most assuredly was, in Sir John Jervis's naval code, *the* nautical misdemeanour; officers intending it he would call 'moonstruck.' But while loftier annals than these are alone fit to record how truly worthy, as a hero, Mr. Bayntun was of his great patron; here it may be permitted to tell, how singularly similar, in their most sage principles of being wedded only to their profession, and how equal in unconquerable valour in maintaining them these mighty men were. Mr. Bayntun too was fated to be smitten, and transgress. As yet, however, being only an officer after his admiral's own heart, and not yet a lunatic, his reply, in 'all astonishment,' that any one could imagine him capable of the crime, was, as has been since ascertained from himself, 'a request to know who could have so traduced him, and injured him in Sir John's opinion; for that he abhorred the idea as much as Sir John did.' And this was couched in language showing that he was but in right earnest in his protestations, and alarmed at his peril. Explanations followed; letters had been misdirected by Lady Jervis; and the officer, who had received the favourable answer intended for Mr. Bayntun, was obliged to exchange it for the discouraging *coup*, to which he had rendered himself liable."

No man knew better how to appreciate bravery than Lord St. Vincent. Captain Faulknor, who afterwards fell nobly in action, having performed a dashing exploit in his presence, in command of the *Zebra*, was thus rewarded:—

"The signal being made to the Zebra, for her Captain; when he was seen approaching in his boat, Sir John ordered the Boyne's hands to be turned-up, assembled all her officers, and placing himself at their head, he greeted the hero, at his first step on the Boyne's quarter-deck, with a commission promoting him to Post rank, addressing him, 'Captain Faulknor, by your daring courage this day, a French frigate has fallen into our hands. I have ordered her to be taken into our service; and here is your commission to command her, in which I have named her after yourself, sir, The Undaunted*.'"

Lake Mœris—[*Mémoire sur le Lac Mœris*]. Par Linant de Bellefonds. Alexandrie, 1843.

A very obscure, though interesting point in the descriptions of Ancient Egypt, transmitted to us by the Greek and Latin writers, is cleared up by the author of this Memoir, in an unexpected, and, at the same time, perfectly satisfactory manner.

Herodotus, after remarking that the edifices and public works of Egypt far surpassed in costliness and magnitude those of Greece; that one of the Pyramids was, in this respect, equal to a number of the finest Greek temples taken together; and, again, that the Labyrinth was much superior to the Pyramids, goes on to say, that Lake Mœris, or (to use the historian's own expression) the Lake of Mœris, was a still more astonishing and admirable work than the Labyrinth. It was, he expressly tells us, not a natural sea or lake, but made with men's hands; it had a circuit of 3,600 stadia, or about 360 geographical miles;† it received the waters of the Nile during the season of inundation, and then flowed back again as the

* Never should the British navy be without an 'Undaunted,' whose figure-head should exhibit Capt. Faulknor's handsome bust.

† M. Linant assumes, to no purpose, that Herodotus here employs a *small* stadium. It may well be doubted whether the Greeks, inexact as they often were, ever blundered so systematically as to employ the same denomination of measure with different values; but here such an assumption is quite out of place, since it is in the very paragraph which contains the description of the Lake of Mœris, that Herodotus states his system of measures; from the palm upwards, and assigns 600 feet to the stadium.

Digitized by Google

river fell. Thus, it appears to have been constructed as a great reservoir, which moderated the floods, and likewise supplied water for irrigation in the dry season. Its general direction was from south to north, but it made an angle westwards, and was thought by the people to have a subterranean outlet to the Syrtis (Gulf of Sert). We know that Crocodilopolis, afterwards Arsinoë, the ruins of which lie at no great distance from Medinet, the capital of Fayúm, was on the shore of the Lake of Mœris; the Labyrinth, too, was not far from it. But what has become of that great sea? What traces remain of the works which supported such a body of water? Strange to say, no one traveller, or commissioned body of travellers, of all who have visited Egypt, has hitherto attempted to answer these inquiries, or has even engaged in a serious investigation of the difficulties here suggested. Some of the learned have supposed, that by the Lake of Mœris we are to understand the Bahr Yusef, or Joseph's Canal. Absurd supposition! why should Herodotus give the title of lake to a canal fifty yards wide? Why should he speak of its circumference? How could he say that it was 300 feet deep—that it had two pyramids in the midst of it, and was connected with the Nile by a canal? Others maintain that Lake or Birket Keïrún is the remnant of the Lake of Mœris. But this hypothesis, though generally received, is easily refuted. Lake Keïrún is not an artificial reservoir, but a natural receptacle of water; and, besides, it could never have communicated with the Nile.

This last point has been fully established by M. Linant. Filling a high post as engineer in the service of the Pasha, that gentleman has had ample opportunities of surveying carefully the valley of Fayúm, which lies within the Libyan hills, its opening towards the east being about six miles distant from the Nile. It is distinguishable into three terraces, the first and highest of which is the easternmost portion of the valley. At Awarat el Macta, near the entrance to the valley, the Bahr Yusef flows in a channel cut through the rock. This point, therefore, must be taken as an invariable level; the bed of the canal, where it receives its waters from the Nile, is 46 mètres (150 feet) higher. The second terrace is 7 mètres (23 feet) lower than the first, which it encompasses on the west and north. Beyond this, in the same direction, lies the third terrace, in the lowest part of which, towards the north-west, extends Birket Keïrún, 30 miles long and 6 or 8 in width. The surface of this great lake is 20 mètres, or 66 feet below the level of the second terrace, the soil and configuration of which show that it has never been under water. The supposition, therefore, that Birket Keïrún was the Lake of Mœris, and that it flowed one half of the year into the Nile, is quite inadmissible. M. Linant had arrived at the conviction that the site of the Lake of Mœris must be sought in the highest part of Fayúm, long before he detected any facts directly corroborative of his theory. At length, while resting one day in a ravine in Fayúm, he perceived something like the transverse section of a mound on the top of the banks on both sides, and recollecting that in the direction to which these pointed he had seen a similar appearance, he commenced an investigation which led him at once to the discovery of a great dam, obliterated in many places, but still so frequently traceable, that its general outline may be determined with certainty. It inclosed an area of about 150 square miles. The width of the dam at its base was, perhaps, about 200 feet. Its height above the level of the country outside (*i. e.* toward the north or west), is now about 30 feet, while it is hardly raised 7 feet above the plain within. This difference of level between the internal and external plains has evidently been caused by the deposition of sediment from the waters of the lake. In short, the highest terrace of Fayúm is the site of Lake Mœris, and it owes its present elevation above the second terrace to that circumstance. M. Linant shows clearly that the outline which he has traced of the Lake of Mœris, coincides perfectly with the sites, of Crocodilopolis, for example, and the Labyrinth, connected with it by the ancients. He has also pointed out the remains of the two pyramids in the lake, described by Herodotus.

But we cannot enter into details of this kind; it will be sufficient to say, that M. Linant's discovery is complete in itself, and that, considering the amount of industry employed for nearly half a century in investigating the antiquities of Egypt, it may well take the learned world by surprise. But perhaps some may be dissatisfied with this discovery, because it represents Lake Mœris with only a fifth part of the circumference ascribed to it by Herodotus. We can only say, that the historian's mistake appears to us quite obvious: he allowed his imagination to eke out the defects of his positive knowledge. He visited the Labyrinth and the City of the Crocodiles, but where he crossed the lake the low dam which supported it on the north was below the visible horizon. Seeing, therefore, that the lake washed the Libyan hills on the east, he supposed it to be co-extensive with that range, to be *behind the hills above Memphis*, and thence to stretch away westwards. We here venture to differ from M. Linant's interpretation of the supposed western bend. With one more remark we shall conclude. It is generally supposed that Fayúm owes its name to Birket Keïrún; but this lake, which was anciently filled by the drainage of the Lake of Mœris, is in the desert; whereas, the name Fayúm is properly applied to the elevated and fertile portion of the valley. Is it not more probable, that when, from neglect and dilapidation, the dams of the Lake of Mœris gave way, and the water was drained off, the rich land thus recovered received from the Egyptians the natural appellation of Ph-iom, or the sea? Thus the name Fayúm would properly belong to the bed of the Lake of Mœris.

George Selwyn and his Contemporaries, with Memoirs and Notes. By J. H. Jesse. Vols. III. & IV. Bentley.

THE character given of this work on the appearance of the former volumes (*ante*, pp. 501, 526) applies, of course, to the present, and to the manner in which they are edited. It is true that here are displayed workings of feeling deeper, perhaps, than any which were revealed in the former series. George Selwyn's attachment for Mademoiselle Fagniani, and his schemes to obtain the guardianship of her, are constant topics with many of his correspondents. His health is spoken of as endangered by the suspense, and "Mie Mie" (the pet name of the child) approached as a person who must be propitiated by all who wished to stand well with her protector. Strange speculations on the trenches which may be ploughed in the heart of even the most polished and indifferent man of the world, are awakened by the whole story; to say nothing of the numberless glimpses it affords into a region of morals and sentiments unknown, we are happy to believe, to the middle classes. But, with this exception, and the more selfish Jeremiades of Lord Carlisle over his play-impaired finances, the correspondence is mostly, as before, elegantly turned and flavourless:—*lemonade* compared with the *champayne* of the Strawberry Letters. Nor has Mr. Jesse come one step nearer an understanding of the duties of an editor since we last met him. He is learned in explaining, "for the benefit of country gentlemen," what *sortes Virgilianæ* mean, but still neglects names, and confuses dates, &c. on which our town memories want refreshing, with a carelessness hardly seen in print since the ill-fated Swinburne Correspondence was issued.

Our gleanings, then, from this collection cannot be of much value. The Honourable Henry St. John writes, with unction, of a "night-gown *à la* Dauphine," of a gauze bespoken for Madame Fagniani, and of the establishment of a "*White's* Club" at Mahon. The Honourable Charles James Fox finds Clarendon hard reading—his Lordship bad in style, and "a good deal of the old woman." Horace Walpole is prettily pleasant about lap-dogs, and bitterly scandalous in a new version of La Fontaine's "*fiancée du Roi de Garbe.*" The Earl of Carlisle calls "dear George's" attention to an advertisement in the papers "to desire Lady Harrington would not disturb the audience at the playhouse with her snuffling gabble": and here is a little of the Earl's morality about "dear Charles" (Fox), which is singularly illustrative of human instability when read as prologue to a series of confessions of play-debts and play-difficulties which follow:—

"It gives me great pain to hear that Charles begins to be unreasonably impatient at losing. I fear it is the prologue to much fretfulness of temper; for disappointment in raising money, and any serious reflections upon his situation, will (in spite of his affected spirits and dissipation, which sit very well upon Richard,) occasion him many disagreeable moments. They will be the more painful, when he reflects that he is not following the natural bent of his genius; for that would lead him to all serious inquiry and laudable pursuits, which he has in some measure neglected to hear Lord Bolingbroke's applause, and now is obliged to have recourse to it and play, to hinder him from thinking how he has perverted the ends for which he was born. I believe there never was a person yet created who had the faculty of reasoning like him. His judgments are never wrong; his decision is formed quicker than any man's I ever conversed with; and he never seems to mistake but in his own affairs. It is fair to think that he will not give his reason fair play in his own case. It seems to be very extraordinary that he can make his understanding useful to the whole world, but will not upon any account permit it to be of service to himself; and for his own private affairs he borrows one of some of the fools who tell him it is impossible but that, any morning he chooses, he may set his affairs right again. When he tells you that he will not talk to you upon his circumstances, he is certainly right; for if your head is not so much heated with chimerical schemes as his own, or if you are not prepared to hear of enchantment and miracles, you will never enter into his manner of reasoning, or derive any comfort from those resources which he brings into his picture. These he would willingly think are very near and on the fore-ground, but which to every other eye must appear flung far back in the distance."

Next, we will give a scrap of virtù, with the true Strawberry mark upon it:—

"York, Aug. 12th, 1772.

"Dear George,—I love to please you when it is in my power, and how can I please you more than by commanding Castle Howard? for though it is not the house that Jack built, yet you love even the cow with the crumpled horn that feeds in the meadow that belongs to the house that Jack's grandfather built. Indeed, I can say with exact truth, that I never was so agreeably astonished in my days as with the first vision of the whole place. I had heard of Vanbrugh, and how Sir Thomas Robinson and he stood spitting and swearing at one another; nay, I had heard of glorious views, and Lord Strafford alone had told me I should see one of the finest places in Yorkshire: but nobody, no, not *votre partialité*, a Louis Quatorze would have called you, had informed me that I should at one view see a palace, a town, a fortified city, temples on high places, woods worthy

Digitized by Google

of being each a metropolis of the Druids, vales connected to hills by other woods, the noblest lawn in the world fenced by half the horizon, and a mausoleum that would tempt one to be buried alive; in short, I have seen gigantic places before, but never a sublime one. For the house, Vanbrugh has even shown taste in its extent and cupolas, and has mercifully omitted ponderosity. Sir Thomas's front is beautiful without, and except in one or two spots, has not a bad effect, and I think, without much effort of genius, or much expense, might be tolerably harmonized with the rest. The spaces within are noble, and were wanted; even the hall being too small. Now I am got into the hall, I must beg, when you are in it next, to read Lord Carlisle's verses on Gray, and then write somewhere under the story of Phaeton these lines, which I ought to have made extempore, but did not till I was half way back hither:

> Carlisle, expunge the form of Phaeton;
> Assume the car, and grace it with thy own,
> For Phœbus owns in thee no falling son.

"Oh! George, were I such a poet as your friend, and possessed such a Parnassus, I would instantly scratch my name out of the buttery-book of Almack's; be admitted, *ad eundem*, among the muses; and save every doit to lay out in making a Helicon, and finishing my palace. I found *my* Lord Northampton: his name is on his picture, though they showed me his nephew Suffolk's portrait, who was much fatter, for his. There is a delicious whole-length of Queen Mary, with all her folly in her face and her hand and a thousand other things, which I long to talk over with you. When you write to Spa, pray thank Lord Carlisle for the great civilities I received here. The housekeeper showed me and told me everything, and even was so kind as to fetch Rosette a bason of water, which completed the conquest of my heart. Wine I was offered, and fruit was heaped on me, and even dinner was tendered; in short, I never passed a day more to my content. I only wanted you, and I should have been as happy as I was at Iceaux; you know my ecstasies when I am really pleased. By the end of next week I shall be in town, and hope to find you there, that we may satisfy both ourselves with larger details. When I mentioned the attentions paid to me, I am ungrateful to forget the sun, who was complaisance itself, shone all day, gilt an hundred haycocks that were spread over the great lawn, and illuminated the mausoleum during my dinner. And now, will you tell me that Lord Carlisle is not nearer related to him than some folks thought? Let me tell you, this is much better authenticated than his lordship's priority to Howard of Corbie, in which you are mistaken, and so good night. Yours most cordially, Hor. Walpole."

Bishop Warburton, and that seldom-seen-or-heard-of personage, the Bishop's Lady, shortly afterwards figure in the correspondence, Selwyn having lent the latter his house during a time of convalescence. The Earl of March, in five lines, fillips off "some bad news from Boston," which ended in the loss of the United States. Mr. Brodrick counts up the names of the Parisian wits, quotes the then prices of French silk-stockings—fifteen livres a pair!—and Walpole, also in Paris, detects an Englishwoman at the French opera by her heap of plumes and her want of rouge, adding a sketch of one of his "dear old blind woman's" new friends:—

"A Madame de Marchais. She is not perfectly young, has a face like a Jew pedlar, her person is about four feet, her head about six, and her *coiffure* about ten. Her forehead, chin, and neck, are whiter than a miller's; and she wears more festoons of natural flowers than all the *figurantes* at the Opera. Her eloquence is still more abundant, her *attentions* exuberant. She talks volumes, writes folios—I mean in *billets*; presides over the *Académie*, inspires passions, and has not time enough to heal a quarter of the wounds she gives. She has a house in a nutshell, that is fuller of invention than a fairy tale; her bed stands in the middle of the room, because there is no other space that would hold it; it is surrounded by such a perspective of looking-glasses, that you may see all that passes in it from the first antechamber."

Shortly after this, we find the Lord of Castle Howard provoked at Sir Joshua sending home some portraits before it was convenient to pay for them. Then he loses 10,000*l.*, it appears, at one sitting; on which occasion the following repentant comments suggested themselves:—

"There is no argument or reasoning in your letter that I can attempt to controvert; there is no idea in it that does not perfectly coincide with mine; I own, and submit to the truth of it. Brought up to no profession, I have only to regret that no road of that kind is open to me; that, at the same time I was retrieving my affairs, I was adding to my reputation. I do protest to you, that I am so tired of my present manner of passing my time—however I may be kept in countenance by the number of those of my own rank and superior fortune—that I never reflect on it without shame. If they will employ me in any part of the world, I will accept the employment, let it tear me, as it will, from everything dear to me in this country. My friends and my family have a right to call upon me for the sacrifice, and I will submit to it with the resolution of a man. I would have held this language to others, but the discovery of my intentions might (instead of procuring me what my rank and birth entitle me in some measure to expect) have obtained for me, perhaps, the consulship of Smyrna! If any of our expectations should be gratified in the winter, I cannot expect anything sufficient to balance the expenses of living in London. If I accept anything, I must attend Parliament—I must live in London. If I am not treated with consideration I can live here; if that can be called living, which is wasting the best years of my life in obscurity; without society to dispel the gloom of a northern climate; left to myself to brood over my follies and indiscretions; to see my children deprived of education by those follies and indiscretions; to be forgotten; to lose my temper; to be neglected; to become cross and morose to those whom I have most reason to love! Except that the welfare and interest of others depend upon my existence,—I should not wish that existence to be of long duration."

The next letter—and the last on which we shall pause, is one from kind Mr. Storer, containing confirmation strong of the popular belief that George Selwyn loved "a hanging," which, it will be remembered, Mr. Jesse, in his introductory preface, did his best to disprove. The opening strikes us as whimsically artless:—

"I should be very inclinable to obey your commands, which Lord March delivered me, respecting the fate of the unfortunate divine, but though an eyewitness of his execution, as I never was at one before, I hardly know what to say respecting his behaviour. Another was executed at the same time with him, who seemed hardly to engage one's attention sufficiently to make one draw any comparison between him and Dodd. Upon the whole, the piece was not very full of events. The Doctor, to all appearance, was rendered perfectly stupid from despair. His hat was flapped all round, and pulled over his eyes, which were never directed to any object around, nor even raised, except now and then lifted up in the course of his prayers. He came in a coach, and a very heavy shower of rain fell just upon his entering the cart, and another just at his putting on his night-cap. He was a considerable time in praying, which some people standing about seemed rather tired with: they rather wished for some more interesting part of the tragedy. The wind, which was high, blew off his hat, which rather embarrassed him, and discovered to us his countenance, which we could scarcely see before. His hat, however, was soon restored to him, and he went on with his prayers. There were two clergymen attending him, one of whom seemed very much affected. The other, I suppose was the ordinary of Newgate, as he was perfectly indifferent and unfeeling in every thing that he said and did. The executioner took both the hat and wig off at the same time. Why he put on his wig again I do not know, but he did, and the Doctor took off his wig a second time, and then tied on a night-cap which did not fit him; but whether he stretched that, or took another, I could not perceive. He then put on his night-cap himself, and upon his taking it he certainly had a smile on his countenance, and very soon afterwards there was an end of all his hopes and fears on this side the grave. He never moved from the place he first took in the cart; seemed absorbed in despair, and utterly dejected, without any other signs of animation but in praying. I know the same thing strikes different people different ways, but thus he seemed to me, and I was very near. A vast number of people were collected, as you may imagine. I stayed till he was cut down, and put into the hearse. I am afraid my account cannot be very satisfactory to you, but I really do not conceive an execution with so few incidents could possibly happen; at least, my imagination had made it a thing more full of events than I found this to be. Adieu, my dear George."

With this, we must close our extracts for the week. Enough remains for another notice.

Fulton and Steam Navigation—Memoirs of Edward Cartwright, &c.

In our recent notices of Dr. Cartwright's biography, we omitted a subject of interest and historical value, because it occurs somewhat accidentally in that biography, forming, indeed, an episode in which Dr. Cartwright is hardly more than a passive spectator. The subject of that episode is the American Fulton and the invention of steam navigation. The correspondence of Mr. Fulton is one of the most interesting parts of the volume, both as throwing light upon the character of that extraordinary man, and as furnishing us with facts and dates of value in the history of the invention of steam navigation. Indeed, the character of Fulton is not sufficiently estimated or understood in this country; chiefly, we believe, because his claims to the invention of steam navigation have been matter of national dispute between America and Britain; and, as usual, there has been awakened in the controversy so much party feeling, that the dispute has been conducted with a warmth, and even acrimony, by no means favourable to a clear and impartial view of historical truth. On the one hand, Fulton has been put forward as the exclusive inventor of steam navigation; the sole heir to the gratitude of posterity; the only man endowed with the talents, science, experience, and foresight equal to the achievement of so great a revolution. This exaggeration—not unnatural—of the merits of a countryman, has led, not less unfairly or less naturally, to the injustice, on the other hand, of denying him all share of merit; of reporting him merely as a copyist,—as a man of successful enterprise and commercial speculation, and in no way entitled to our respect or gratitude. This is the unhappy—would it were the unusual—effect of controversial writing. We desire to embrace the opportunity which the publication of these letters gives us of considering Fulton's character apart from these controversies, and of presenting his claims to the kindly feelings and estimation of our countrymen, as a man of high talent, refined taste, enlightened and generous views, who, originally descended from this country, spent many years of his life among us, mingled in the stirring scenes of an eventful period of our history, and was, finally, to his own country that great benefactor who *introduced there*, most unquestionably, a new element of transport admirably suited to the geographical constitution and historical position of his young and rapidly advancing country.

The life of Fulton contains few events of importance until the period when this memoir introduces him to our notice. Ambitious both of fortune and of knowledge, he was the founder of his own fortune, and his own schoolmaster—important elements in the formation of character. His father was a native of Kilkenny, and his mother of Irish extraction: he lost the former when three years old, and enjoyed the blessing of an affectionate mother's care till he attained the age of twenty-one. His natural disposition unchecked, led him to adopt the profession of a painter, which he practised in

Digitized by Google

Philadelphia, where he was noticed by Franklin; and so considerable were his talents in art that he was recommended to set out for England, and push his fortune in London. West, the painter, patronized his young countryman, took him into his house, and became his friend; but art does not appear to have occupied his mind or his time further than as the means of respectable subsistence—a purpose which, for some years, it answered sufficiently well. He had, however, imbibed the true spirit of an artist; for in the wealthier years of a prosperous life, he made strong efforts to imbue his countrymen with a love of art, and to establish among them high standards of art.

But it is as an engineer, rather than as a painter, that the world has to do with Mr. Fulton. He came to London at the age of twenty-one, in the year 1787; and he does not appear to have assumed any other functions than those of the artist until 1794, when he took out a patent for certain expedients in canal navigation! and soon after (1796) published a work on canals, exhibiting great originality, and no little invention, science, and sagacity. He proposed a system of small canals, instead of large ones, to be navigated with light small boats of a few tons' weight. These canals he proposed to accommodate to the inequalities of the country by means of vertical lifts and double inclined planes, to be worked by water. Had his views been carried into effect, and had experience of these canals pointed out what recent researches have discovered, that high velocities may be obtained on small canals at a much less expenditure of power than low velocities on large canals, then, in all probability, a system of communication might by this time have been created to rival railways in velocity, and to excel them in economy both of power and cost of transit.

From this time it seems that Fulton ceased his practice as an artist, and devoted himself wholly to the employments of engineer and mechanist; but we have not been able to meet with any records of his labours as an engineer, if we except the volume on canals, and some patents for rope-spinning and flax-spinning, a machine for sawing marble, and the mechanical dredging scoop, still used extensively both in England and Ireland for clearing canals and harbours, which his American eulogist attributes to him. The prosecution of his inventions soon afterwards (in 1797) led him to France.

It is here that the biography of Cartwright helps us out with the history of Fulton and of steam navigation. The following passage introduces us very agreeably to the company of two amiable and distinguished men. In 1796, Mr. Cartwright removed to London with his family, and the scene of the following description is in this city:—

"By his removal to the metropolis, Mr. Cartwright enlarged the sphere of his acquaintance amongst men of ingenuity and science, and his house again became the resort of projectors, of various merits and pretensions. His own manners were peculiarly calculated to make his society coveted where his talents were admired. No man who knew so much was so little pertinacious in conversation; he had a thorough contempt for arrogance, and was remarkable for his openness and freedom from jealousy towards rival and contemporary projectors. The coincidence of their respective views produced, instead of rivalship, intimacy and friendship between two such projectors; and Mr. Fulton's vivacity of character and original way of thinking, rendered him a welcome guest at Mr. Cartwright's house. The practicability of steam navigation, with the most feasible mode of effecting it, became a frequent subject of discourse. The writer of these memoirs has now to regret, amongst many other neglected opportunities of acquiring knowledge, that, from the carelessness of youth, such a degree of attention was not given at the time to these discussions as might have thrown considerable light upon a subject since become of such universal interest. Who could then contemplate.... that speculations apparently so chimerical should have been realized to their present wonderful extent? It is not assumed that Mr. Fulton, even with Mr. Cartwright's assistance, had at that time brought his plan of a steam-boat to any degree of maturity; but it is believed that neither of these gentlemen were then aware of any other person having advanced towards steam navigation as far as themselves.... It is, however, well known, that Mr. Cartwright did construct the model of a boat, which, being wound up like a clock, moved on the water, so as to prove the experiment in a manner satisfactory to the inventor."

These statements prove little more than that Fulton and Cartwright were on a footing of familiar intercourse, and conversed together frequently on mechanical matters. They serve, however, as an introduction to the correspondence which followed this personal intercourse, and give us a key to some of the allusions contained in it.

It was in France that Mr. Fulton's career first became attended with distinction and importance. We find him, in 1797, in Paris, where he continued to reside for the next seven years, in the bosom of a family to whom he was endeared by a lasting and changeless friendship, and where he met with the sympathy, appreciation, and co-operation, so conducive to the peace of a man of genius, yet so rarely enjoyed by them to the same extent as in this instance. In this asylum he engaged in studies of a kind well suited to discipline his mind, and furnish it with instruments of future achievement. The following picture of this happy period of mixed repose and activity, we have taken from the account of one who participated in the enjoyments of this peaceful scene:—

"Here commenced that strong affection, that devoted attachment, that real friendship, which subsisted in a most extraordinary degree between Mr. Barlow and Mr. Fulton during their lives. Soon after Mr. Fulton's arrival in Paris, Mr. Barlow removed to his own hotel, and invited Mr. Fulton to reside with him. Mr. Fulton lived seven years in Mr. Barlow's family, during which time he learnt the French, and something of the Italian and German languages. He also studied the higher mathematics, physics, chemistry, &c., and those sciences which aided his natural genius in attaining that superiority which he afterwards displayed over those who, with some talents and without any sort of science, have pretended to be his rivals."

There is no sufficient reason to doubt that Mr. Fulton discovered some means of submarine navigation, though, as the plan was never published, this extraordinary invention has been lost to society; that he actually constructed and used with success, a vessel capable both of sailing on the surface of the water and of descending below to any desired depth, remaining any given time, without inconvenience to passengers. He could regulate his ascent or descent, and controul the motion, in velocity and direction, so as to move with as great ease and certainty below as upon the surface. The following facts enable us to form some estimate of the degree of success which his system had attained:—

"On the 26th of July, 1801, he weighed his anchor and hoisted his sails; his boat had one mast, a mainsail, and a jib. There was only a light breeze, and she did not move on the surface more than two miles an hour; but it was found that she would tack and steer, and sail on a wind, or before it, as well as any common sailing boat. He then struck her masts and sails, to do which and perfectly to prepare the boat for plunging, required about two minutes. Having plunged to a certain depth, he placed two men at the engine intended to give her progressive motion, and one at the helm, while he, with a barometer, before him, governed the machine which kept her balanced between the upper and lower waters. He found, that with the exertion of one hand only he could keep her at any depth he pleased. The propelling engine was then put in motion, and he found upon coming to the surface that he had, in about seven minutes, made a progress of above four hundred yards. He then again plunged, turned her round when under water, and returned to near the place he began to move from. He repeated his experiments several days successively, until he became familiar with the operation of the machinery and the movements of the boat. He found that she was as obedient to the helm under water, as any boat could be on the surface. In the next experiment he descended, with three companions, and remained there for four hours and twenty minutes! at the expiration of this time he came to the surface without having experienced any inconvenience from having been so long under water."

This species of ship he appropriately named the *Nautilus*, and a careful examination of Professor Owen's description of the *Nautilus* might materially assist the inventor of any apparatus destined for a similar use.

Having discovered the means of descending at pleasure beneath the surface of the ocean, and of moving in that element whithersoever he would, Mr. Fulton next attempted to derive useful, practical results from this new faculty, of moving unseen, and his first application of it was to the uses of warfare. He invented missiles and projectiles of various kinds suited to this new element, and gave to them the name of torpedoes; these appear to have been shells charged with gunpowder in large quantity, capable of being propelled through water by the mechanism which they contained, and so designed as to explode whenever they had traversed a given distance. By this means he succeeded in blowing up vessels made the subject of experiment, one in France, another off Walmer Castle, and finally one in his own country. But he had those difficulties to contend with which are common to all inventors of new methods and systems—prejudice, interest, ignorance, and inexperience. The effect, however, produced by his experiments was such, that there is every reason to suppose that the invention, or at least his non-intervention, was purchased by Government. On this subject Dr. Cartwright's Memoir has the following passage:—

"The British Ministry did not think it unworthy of inquiry how far Mr. Fulton's pretension to success, in so formidable an art, was well-founded or not. Mr. Cartwright, who was probably in full possession of Mr. Fulton's secret, and no less impressed than Earl Stanhope with the notion of its dangerous extent, was consulted in this inquiry. On the renewal of the war, Mr. Fulton's neutrality, at least, was considered worth the purchase; and Mr. Cartwright was appointed one of the arbitrators to settle the terms upon which Mr. Fulton consented to the suppression of his secret. The terms of the award were probably satisfactory to Mr. Fulton."

These facts, if authentic, are important, and are omitted in the American biography of Fulton.

The claims of Mr. Fulton, or rather the claims made for him by his friends (for we have no evidence that he claimed to be considered the inventor of steam navigation), have been the subject of disputes between the partizans of Fulton and of rival claimants, in his own country and between America and England. Oliver Evans, Fitch, Rumsey, Livingstone, Stevens—all in America—had not only conceived the idea of navigating vessels by steam, but had actually embodied their ideas in working steam-boats with more or less success; while in other countries, as in England, the idea was not only entertained, but full descriptions and engravings of the principle and mode of operation were published as early as 1737, and sold in London for sixpence: and in Scotland two steam-vessels had been propelled with success, one in the year 1788 and the other in 1789, and a third, larger than the former, was afterwards constructed with still greater success, in 1802. In all these expe-

Digitized by Google

riments something like six miles an hour was the velocity attained, and full accounts of their success were published in the prints of the day; they were matters of notoriety. The whole design of a steam-vessel, propelled as now by paddle-wheels, was conceived by Hulls in England, in 1737, and executed on three different scales of magnitude in Scotland, in 1788, 1789, and 1802, by Miller, Taylor, and Symington. We shall be able, from the documents before us, to arrange these claims in their respective places with regard to Mr. Fulton.

It is plain, therefore, that after the dates 1788 and 1789, the construction of boats propelled by steam, at the rate of five and six miles an hour, having been accomplished, and ample accounts of their performances in the public prints having rendered their success matter of notoriety, the subject was one of frequent and interesting discussion among scientific men and inventors in Great Britain. We accordingly find Earl Stanhope, Mr. Cartwright, and others, devoting their attention to this subject, and already engaged in experiments. It was in 1787 that Mr. Fulton came to this country, —consequently he was here at the very time when these early steam-boats were constructed, and when every one interested in mechanical matters, and associating with mechanical men, must have been aware of the steps which had been taken in so interesting and fascinating a subject for mechanical ingenuity. It was not till 1797 that Mr. Fulton left this country to reside in France. The biographer of Dr. Cartwright accordingly shows us, that the subject occupied both the attention of Cartwright and that of his young friend Fulton. He says, "Mr. Cartwright did construct the model of a boat, which, being wound up like a clock, moved on the water, so as to prove the experiment in a manner satisfactory to the inventor;" and again, "At this time, also, navigating by steam was one of Mr. Cartwright's favourite projects, and he conceived that his newly-invented steam-engine might be made applicable to that purpose." Further, "Mr. Fulton's vivacity of character and original way of thinking, rendered him a welcome guest at Mr. Cartwright's house. The practicability of steam navigation, with the most feasible mode of effecting it, became a frequent subject of discourse." It is plain, then, that as far as the general scheme of navigation by steam was understood at that time, it was discussed by Fulton in common with others.

A letter from Lord Stanhope to Mr. Fulton has been added by his biographer, and proves, as we have already stated, that the subject was then one of frequent discussion. Lord Stanhope writes from Holdsworthy, Devon, 7th Oct. 1793: "Sir,—I have received yours of the thirtieth of September, in which you propose to communicate to me the principles of an invention, which you say you have discovered, respecting the moving of ships by steam. It is a subject on which I have made important discoveries. I shall be glad to receive the communication which you intend, as I have made the principles of mechanics my particular study," &c. It is plain, from the terms of this letter, that neither Mr. Fulton nor Lord Stanhope at this time spoke of steam navigation as a thing to be invented—neither alluded to the invention *of* steam navigation, but the invention and discovery of something *respecting* steam navigation: just as at the present time we have frequent announcements of new inventions, discoveries, and improvements in steam navigation, concerning generally either some change in the engine, or in the ship, or the paddle-wheels, or some other modification of parts. This distinction between the invention of the art itself and the invention of something concerning the art, is of some importance, and we shall find it of use to us in weighing the value and understanding the true tenor of the following correspondence.

Carrying with us this estimate of the amount of information possessed at that period by mechanical men in England regarding the invention of steam navigation, and of the extent to which the attention of inventors was directed towards the improvement of its details, so as to contribute to its perfection and introduction into general usefulness, we shall now follow Mr. Fulton to France, in 1797; whence we find him writing to his friend Cartwright, as follows:—

"Paris, Sept. 20, 1797.

"I have not had an opportunity of answering your letter of the 20th August until now. I am much pleased with your mode of making houses fire-proof, and should be happy to see it extended to America. * * My idea of many of those things which may be considered as only the overflowings of your mind, is to convert them into cash, and adhere firmly, even without partners, to some of your more important objects, such as the steam-engine, boat moving by steam, or cordelier. I have a great objection to partners. I never would have but one, if I could help it, and that should be a wife," &c.

"R. Fulton."

Hitherto, therefore, it appears that we are to regard the inventions already alluded to, concerning steam navigation, and indeed the whole subject, as far as it was matter of intercourse between Fulton and Cartwright, as belonging to the latter almost exclusively.

In the following year, however, we find Fulton engaged in experiments having an immediate relation to steam navigation—namely, a mode of propelling through the water by means of a fly or smoke-jack, not unlike the Archimedean screw in its mode of action.

"Paris, February 16, 1798.

"I have received yours of December 11th, at which time you could not have received my last letter, which was dated December 8th. You speak of expecting my return, but that, I fear, is very doubtful, in consequence of the delays at the patent office, the approaching period when I must necessarily return to America, and the difficulty of obtaining a passport from hence to England. * * Works of magnitude I find cannot be hurried. It would give me much pleasure to make the produce of your mind productible to you. You will, therefore, consider what part of your inventions I may be intrusted with. The steam-engine, I hope, may be made useful in cutting canals and moving boats, so that it will be directly in my line of business. By the bye, I have just proved an experiment on moving boats, with a fly of four parts, similar to that of a smoke-jack. * * I find this apply the power to great advantage, and it is extremely simple. The patent law is now altering, but I fear the price will not be reduced; yet the payments will, perhaps, be made easy, by being 20*l.* a-year for three years. My small canals are making many friends, which business I shall leave in the hands of a company. The celebrated Montgolfier has just made a great discovery in hydraulics; it is a means of raising water from the beds of rivers, by the simple movement of the stream, without either pump or wheel. I know him well, and have seen his model frequently at work. It is forty feet high, and consisting of only two tubes, extremely simple. I also have been contriving a curious machine for mending the system of politics, and applying manual labour to advantage. Of these two inventions I will send you sketches before my departure.—Believe me, &c. "Robt. Fulton."

The mode of propelling, here incidentally mentioned as the subject of experiment, does not appear to have had the application of steam to navigation as its principal object, if indeed as its object at all, for the writer was then actively occupied with the endeavour to obtain the means by which his submarine or diving boat might be urged through the water by the power of the men within it.

It is not, indeed, until 1802 that we find him applying his powers of invention directly to the application of the steam-engine for the purpose of propelling passage-boats through the water; then, indeed, he appears to have taken up the matter in earnest. The circumstances which now, for the first time, induced him to do so, are as follows. Mr. Livingstone had just come over from America, where the general question of steam navigation had been entertained by the legislature of New York, and where Mr. Livingstone had himself constructed a steam-vessel, which, however, failed to attain the required minimum speed of four miles an hour. When Mr. Livingstone arrived in France, as minister from the United States, "he communicated to Mr. Fulton the importance of steam-boats to their common country; informed him of what had been attempted in America, and of his resolution to resume the pursuit on his return, and advised him (Mr. Fulton) to turn his attention to the subject. It was agreed between them to embark in the enterprise, and immediately to make such experiments as would enable them to determine how far, in spite of former failures, the object was attainable: the principal direction of these experiments was left to Mr. Fulton, who united, in a very considerable degree, practical to a theoretical knowledge of mechanics." From this time Mr. Fulton appears to have zealously directed his attention to the subject, as we are warranted to infer from the following letter to Dr. Cartwright:—

Paris, 10th March, 1802.

"My good Friend,—Be so kind as to let me know how you have succeeded in your steam-engine. To what state of perfection you have brought it? What will one of a six-horse power, making a three or four foot stroke, cost? How much will it weigh? How much space will it require when rendered as compact as possible? What weight and value of coals will it consume per hour? And how soon can it be made? —I think you once mentioned to me your intention to use spirits of wine, and that you would obtain a power of at least thirty pounds to the square inch? Have you succeeded in these great objects? The object of these inquiries is to make part of an examination on the possibility of moving boats of about six or seven tons by steam-engine, and your engine I conceive best calculated for such a work, particularly as the condenser may always have the advantage of cold water without adding much to the weight of the boat; and having the advantage of cold water may enable you to work with ardent spirits, and produce the desired elasticity of steam with one-half the heat—hence, in calculating the weight of the whole apparatus, the weight of the condensing water will be trifling: it is therefore the weight of the engine and the fluid in the boiler which are to be calculated. For this object I believe the engine should be double, with the steam acting on the top and bottom of the piston, or in two cylinders, the one ascending while the other descends. For the particular case, where such a boat is wanted, I believe it is of more importance to have a light and compact engine, than to have too much regard to the economy of fuel, unless the additional weight of the fuel to go twenty miles would be more than the additional weight of the engine to economize the heat. To gain power in a smaller space, how would it answer to make the boiler sufficiently strong to heat the steam to two atmospheres, or thirty pounds to the square inch? thus a cylinder of six inches would give a purchase of 300 lb.; that is 900 lb. constant purchase, which is about the run of my demand. As for example, 3 lb. will draw a piece of timber twenty feet long which presents a butt end of one foot square at t he speed of—

		1 mile per hour.
12 pounds	2	ditto.
48 ,,	4	ditto.
96 ,,	6	ditto.
120 ,,	7	ditto.

Now supposing my boat to be forty feet long and five feet wide—boat, passengers and engine, weighing six tons—it will present a front of about six feet resistance, or 720 lb. purchase: to run such a boat 7 miles per hour—

Digitized by Google

Suppose the boat to weigh.....2 tons.
30 passengers, with their baggage....3
5

one ton is left for the engine and machinery. From this calculation you will be able to judge what can be done by your invention; and if by your means I can perfect my plan, I have got a good opportunity of rendering your engine productive to you, and it will give me pleasure to do so. You will be so good as write to me as soon as possible, answering in a particular manner the questions stated, with any observations you think proper and will be so good as to make on my proposed attempt.

"ROBERT FULTON."

These are the shrewd calculations of a sagacious inventor, and indeed the whole of his progress in this matter exhibits no ordinary degree of practical sagacity. It is not, however, to be wondered that Fulton did not at first select, from among the many methods that presented themselves to him, all the true elements of success. He seems to have tried many methods of propelling, rather than adopt the paddle-wheels which Miller used in 1788, and which all men use in 1843. But he set about it in a proper spirit, and prosecuted his inquiries in a sound philosophical method. Three separate subjects appear to have occupied his attention; 1, the construction of a suitable vessel; 2, the adoption of an appropriate steam-engine; 3, the most efficient mechanism for propelling. It is interesting to follow the developement of his ideas in these several departments; and first, of the paddle-wheel as a means of propulsion. Like many ingenious men in his time and ours, Mr. Fulton appears to have found great difficulty in reconciling his mind to the use of so simple and obvious an expedient as the ordinary water-wheel. Paddles, oars, ducks'-feet, chains, chaplets, smoke-jacks, flies, screws, and jets—anything less known or less simple—appear to have possessed, and to possess, greater charms for the inventive mind, than the simple wheel now, and then, so effectively used. Practical experiment and some science at last convinced Mr. Fulton of his errors on this head, and induced him to acquiesce in the adoption of the paddle-wheel of old Mr. Miller.

Many of these experiments were made on a small scale, and the examples we have seen of his methods of operation impress us with a high idea both of the fertility of his resources and the soundness of his judgment. In the spring of 1802 he accompanied an invalid friend to Plombières, through which village there ran a small rivulet, and on this rivulet he made an extensive course of experiments with his ingenious models. But this course of experiments was not concluded without an *experimentum crucis* on a scale large enough for practical purposes. A boat was constructed, sixty-six feet in length and eight feet wide, and was nearly ready for experiment early in the spring of 1803: and Fulton was on the point of making an experiment with her, when one morning as he was rising from a bed on which anxiety had given him little rest, a messenger presented himself, and exclaimed in accents of despair, "Sir, the boat is broken in pieces and gone to the bottom." Mr. Fulton who related the anecdote, declared that this news created a despondency which he had never felt on any other occasion. Upon examination he found that the boat had been too weakly framed to bear the weight of the machinery, and that, in consequence of the agitation of the river by the wind of the previous evening, what the messenger had represented, had literally happened—the boat had broken in two, and the weight of the machinery had carried her fragments to the bottom. His disappointment did not check his perseverance; on the very day that his misfortune happened, he commenced to repair it, and to labour with his own hands to raise the boat, working for four-and-twenty hours without interruption. They were obliged almost entirely to rebuild the boat, which was accomplished in the month of July, 1803.

It was in August, 1803, that a conclusive experiment was made with his boat. It took place in the presence of the French Institute, and of a multitude of Parisians. The French were so grateful for this exhibition, that they called their early steam-boats on the Seine, twenty years afterwards, Fulton-boats. The American biographer states that in this experiment the boat did not move with so much speed as Mr. Fulton expected; "but he imputed her moving so slowly to the extremely defective fabrication of the machinery, and to imperfections which were to be expected in the first experiment with so complicated a machine."

Here we find an inconsistency in the American biographer's statements.—"Mr. Livingstone," he says, "also wrote immediately after this experiment to his friends in this country, (America) and through their interference, an Act was passed by the Legislature of the state of New York on the 5th of April, 1803, by which the rights and exclusive privileges of navigating all the waters of this state, by vessels propelled by fire or steam, granted to Mr. Livingstone by the Act of 1798, which we have before mentioned, were extended to Mr. Livingstone and Mr. Fulton for the term of twenty years from the date of the new Act." Now this implies an impossibility: the experiment is stated to have been made in August, 1803; the application to have have been subsequently and in consequence of the experiment, and yet the Act so applied for passed in April—four months before the experiment! We therefore must conclude that the application for the Act had nothing to do with the experiment, or that the date of the Act was later; say 1804, instead of 1803.

It would have been interesting to know the exact velocity attained by this first steam-boat, and to have learnt something regarding the construction of the engine, but on these points the American biographer is silent. As the velocity of Fulton's next and improved vessel was four miles an hour, it may be inferred that this, which fell so far short of his expectation, was considerably less.

With this experiment, though unsuccessful, yet not unprolific in instruction to the inventor, ended Mr. Fulton's European experiments in steam navigation. He went to France in 1797. For six years he was chiefly occupied in attempts to introduce submarine navigation and submarine warfare, and the experiments on steam were but an episode. His plans of warfare alarmed the English, although they did not obtain confidence or substantial encouragement from the French; and in 1803 Fulton engaged in negotiations with the British government, and came over to this country, the result of which, as Mr. Cartwright's biographer informs us, was the purchase of his neutrality by England. After spending some years in this country, Mr. Fulton embarked at Falmouth in October, and arrived at New York on the 13th December, 1806.

We have thus the following dates:—

Mr. Fulton in England	1787 to 1797	Ten years.
——— in France	1797 to 1804	Seven years.
——— in England	1804 to 1806	Two years.

Mr. Fulton returned to America in the end of 1806.

In this latter visit to England he appears to have accomplished two important objects. He saw the steam-vessel built by Symington for Lord Dundas, and which moved along the Forth and Clyde Canal at the rate of nearly six miles an hour. This vessel was the third constructed by that ingenious man, and was propelled by the common paddle-wheel, driven by a cranked axle, as now in use. This must have fully established Mr. Fulton in his conviction of the practicability and success of such a method of propulsion by steam. We accordingly find that his next important step was to order from the manufactory of Messrs. Watt & Bolton, at Soho, a steam-engine suited to the purpose of propelling a boat by means of a cranked axle and paddle-wheel, and directing it to be sent out to him in America.

In 1807, we find Mr. Fulton established as a citizen of New York—and already embarked in the speculation of his first American steamer. His friend, Mr. Livingstone, appears pecuniarily to have embarked with him. Fulton, however, was sole contriver of all the arrangements. In 1807, the *Clermont* was launched on the Hudson, with the steam-engine of Messrs. Watt & Bolton; she was tried, and achieved five miles an hour. The *Clermont*'s next voyage was a trip of one hundred and fifty miles and back—three hundred miles, to Albany and back, without accident—at the mean rate of five miles an hour; a feat truly wonderful—exhibiting in the mind which superintended the combination no common degree of sagacity, judgment, and foresight.

Mr. Fulton's genius was at last triumphant—his fame and his fortune were established. His country received, at his hands, benefits incalculable—a vehicle of locomotion admirably suited to the young resources and natural advantages of that extensive and fertile continent. The inventions of Watt, Miller, Taylor, Symington, find their consummation as elements of the combination achieved by Mr. Fulton, and have become practical elements in the history of modern society. *America received the benefit with alacrity, honoured the benefactor while he lived, provided for his family when he died, and now justly glories in his memory.*

In this country, there still survive the widow of Taylor, one of the three British inventors of steam navigation—the widow of Bell, the first practical introducer of steam navigation in these islands—and the son of Watt. To these men, this country owes incalculable benefits, immeasurable gratitude—some of the most wealthy and powerful men in the empire, even the Prime Minister of England, owes his wealth and power to one of these inventors. What honour has the son of Watt received at the hands of his country? What tokens of gratitude have these poor widows, impoverished by that whereon we have become rich, received from a generous country? *Ingratitude, shame and wealth are ours*—these only. Here, indeed, America has shown us a worthy example, as yet—probably for ever to be—without imitation.

On the whole, the impression produced on us by the history of Mr. Fulton is, that he was worthy to convey to his country so great a blessing as the art of steam navigation. He appears to have been a man of unquestionable talent, and indefatigable industry: placing a high value on scientific knowledge, he took the trouble to acquire it—he applied it successfully to practical use, not rashly, but regarding with a due value the gradual acquisition of practical and experimental knowledge to aid him in the application—shrewd and far-seeing, he yet possessed sufficient enthusiasm to carry him through the difficulties of enterprises, so new and arduous as those which engaged his active mind. His views regarding his inventions were benevolent and patriotic, with little of mere selfishness or petty ambition. He appears to have prosecuted his aims with singleness of purpose and sincerity. He was amiable, honour-

able, and beloved—an honour to his country and to ours.

Remarks on English Churches, and on the Expediency of rendering Sepulchral Monuments subservient to Pious and Christian Uses. By J. H. Markland, F.R.S. 3rd edition, enlarged. Oxford.

The circumstance of this volume having reached a third edition, not only vouches for its own merit, but proves the popularity of the subject, but for which it might, with equal merit, have stuck to the publisher's shelves. Church-building is—not to speak profanely—one of the hobbies of the day, and the study of it has given rise to another *ology*, termed ecclesiology. Till of late, the Gothic style, even in structures of the ecclesiastical class, was studied merely as architecture, without any particular sympathy—sometimes with ill-concealed contempt, for what was more immediately connected with the religious practices and feelings of former ages; or if matters of that kind called forth any expression of admiration, it was more antiquarian than devotional; the "piety of our forefathers" being merely slipped in occasionally as a harmless unmeaning phrase. Now, however, a change has taken place, no less great than sudden. People have passed from one extreme to another, from negligence and indifference to a scrupulous preciseness in matters of external forms and church ceremonial. To what extent this feeling is now carried by some is evident enough from their endeavours to revive the mystical and enigmatical conceits of symbolism (see *ante*, p. 897), which even when interpreted to us, seem altogether fanciful and arbitrary, not to say puerile or drivelling.

We suspect that there are many "good sort of people" who think they promote religion while they are only indulging in a hobby-horsical taste and notably busying themselves—somewhat after the fashion of "Aunt Elinor"—in establishing orthodox patterns for churches, and for church furniture and upholstery. Church service ought, undoubtedly, to be performed with impressive decency, and with something more; yet there is one particular in which decorum is often sadly infringed, although no one, not even among those who are so tender-conscienced and so scrupulous on minor points, has protested against it, or affected to be in the slightest degree scandalized at it: we mean the practice of making a church a place for displaying showy apparel. Some few years since, when on a visit to a friend residing in a small country town, we observed that the church was unusually full, and our friend, by way of explanation, informed us, that two rival milliners had just arrived from town, with the newest fashions; and certainly, on recollection, the exhibition of bonnets, feathers, and flowers, had been far more tasteful than edifying. A church is not the place for parading finery, and those who can afford it, can also afford a change of plainer attire when they resort to the house of prayer. This sort of indecency is not considered as a profanation of the holiness of the place, gross as it must appear when reflected on, and dividing as it does a Christian congregation into two parties—those who can, and those who can not, afford Sunday gew-gaws. If we have strayed from our own proper subject, we have, at any rate, suggested one to some zealous "Aunt," who may now lecture her own sex upon the proprieties to be observed in regard to church-going apparel. There are other improprieties which call for amendment, which we shall pass in silence, though they are not likely to be detected by Symbolists and Camdenists.

Somewhat akin to each other are frivolity, or parade of dress, on the part of a congregation, and the ostentatious foppery with which tombs and monuments are decked out, as if a church were a sort of Vanity Fair for both the living and the dead. To the subject of monuments, Mr. Markland devotes no inconsiderable part of his volume, the additional chapters relative to them and to epitaphs, in the appendix, included; and hardly need we say that, with him, we strongly protest against the absurdity and bad taste so frequently displayed in them. While the majority of mural tablets and smaller monuments have no pretensions whatever to be considered works of art, they often tend to disfigure the building, being huddled together, and put up wherever a vacant space could be found, and sometimes to the serious injury of walls, mouldings, and pillars, cut away, or cut into, to allow of their being fixed. A mere jumble, a sort of broker's shop look, is the result; and after all, in behalf of very few memorials of the kind, can it be said that they are even instructive; they may flatter family pride, they may possess some interest for the antiquarian and topographer, but to all besides, they are no more than the obituary in an old newspaper.

Modern monuments of a more ambitious kind are, almost without exception, in false taste, if not when considered as mere works of sculpture, without reference either to the building and its architecture, or to the intended purpose, still they are more or less inconsistent, both as Christian and as English memorials, and at variance with our faith and our feelings. It is true, wholesale allegory, with its sprawling and bustling monster compositions, has been laid aside; nevertheless, Pagan ideas and Pagan emblems are almost perforce retained, if there is to be any expression of that sort, and the monument is not to consist of a mere portrait statue, which would equally well, perhaps still better, suit a private gallery, or hall, than a church. It would instantly be scouted as, perhaps, a scandalous profanation, were any one hardy enough to propose that portraits of eminent persons should be painted, or hung up, on the walls of churches in lieu of other monuments to them. Yet, although it must be admitted, that as a question of art, there is a difference between a portrait in painting and one in sculpture, the propriety or impropriety is pretty much the same in either case.

One strong objection brought forward by Mr. Markland in regard to public monuments and statues in churches, and which it is hardly possible to ward off, is that they are almost exclusively in honour of those, who, however well they may have deserved of their country and the state, have no particular claim to stand within the sanctuary of religion; at least not in the character which there secures them a place. The Christian moralist, the Christian philanthropist, may fitly stand beneath the dome of a Christian church—although in more appropriate guise, it could be wished, than do Johnson and Howard; but the military or naval hero,—the literary man, and the man of science, might be more becomingly honoured elsewhere. That the state should express its gratitude towards those who have defended it by their valour, adorned it by their genius in letters or in art, or advanced society by their discoveries in science,—is most commendable, but then it would be still more so were it to provide edifices set apart for such purpose, instead of peopling St. Paul's and the Abbey with them;* where a good deal becomes exceptionable, that would elsewhere not strike as improper, even though it might not be in the best taste.

Whether Gwynn was altogether serious in recommending it, may be doubted, but that writer suggests in his 'London and Westminster Improved,' that there should be a public mausoleum exclusively for those who had "no other pretence for perpetuating their memories, than that they existed a certain number of years, and died worth a certain sum of money": and in such a place old Rundell the silversmith, and Thwaites the grocer, and the millionaire shoemaker of Bishopsgate Street,—whose name we have already forgotten, would shine as worthies of the highest rank. More than once there have been schemes for public mausolea or receptacles for monuments. One of them, on a colossal scale, was projected some dozen years ago by the late Mr. Francis Goodwin, of unlucky memory; it was, however, more of the nature of a cemetery than a mausoleum; and would have extended over we know not how many acres, skirted by copies of all the buildings of Athens, repeated and *dittoed* for the sake of symmetry! The *symmetry* indeed showed itself in the plan, where it was perhaps meant as a pun. Notwithstanding all its symmetry and its double Athens, that cemetery scheme was soon buried in oblivion. More recently there was another scheme for a "Grand National Mausoleum," a gigantic Gothic pile with a spire that would have been loftier than any other either in existence or upon record; besides which there would have been four spacious cloisters and Campo-Santos in addition to avenues or galleries for monuments within the fabric. This project, however, never got so far as to come actually before the public, although a large lithographic view was—we cannot say published, but engraved. Within such a *Utopian* fabric there would have been ample space for the most perfect classification of monuments; yet in regard to these it may be questioned whether the style proposed for the building would have been the best for the purpose, or, in other words, if the monuments themselves could have been sufficiently in accordance with it. In our opinion there would have been in that respect just about the same incongruity as is now so disagreeably striking in Westminster Abbey, or as would be produced if Gothic tombs were erected within St. Paul's. Having again adverted to the two last-mentioned edifices, we would suggest that for some of the memorials which are there rather out of their "element," far more appropriate receptacles might be found already provided. Within the colonnades of Greenwich, and at Chelsea Hospital, the monuments and statues of Britain's naval and military heroes would be at home, protected by the *genius loci;* whereas memorials of warfare, though they be also those of victory and triumph, do not very well accord with the character of the House of Prayer: there are bounds to be observed even by national pride and the exultation of patriotism.

There are bounds, too, to be observed by ourselves, yet instead of attending to, we have broken through them. Instead of "coasting" along Mr. Markland's book, we have run out to sea, and have lost both rudder and compass, by which we might steer back again. We had intended to notice at some length the chapter on "Epitaphs" in the Appendix, which might very well form a chapter in the Curiosities of Literature, on account of the many curious specimens it gives of mortuary composition. Some of them amount to a species of Protestant canonization of the deceased, and fully justify the remark of Goldsmith, that "to go through a cemetery, one would be apt to wonder, how mankind could have so basely degenerated from

* Should there ever be any public structure erected in the metropolis for the reception of monumental statues to British worthies, hardly could there be any scruples raised against a gallery of that kind being opened on Sundays, since if to do so would be inconsistent with the respect due to the day, how infinitely more inconsistent must it be with the respect due to the church to introduce within its hallowed walls, memorials that incite to worldly ambition, and the lust of worldly fame.

Digitized by Google

such excellent ancestors." We must now content ourselves with thus referring to it, and with merely remarking, that if the writer is somewhat excursive in his observations, it would ill become us to reproach him on that score, after our own desultory rambling on the subject.

Narrative of the Travels and Adventures of Monsieur Violet. Written by Capt. Marryat, C.B. 3 vols. Longman & Co.

We deferred our notice of this work, from the difficulties we encountered in our attempts to separate obvious fiction from fact. A fiction, from the author of 'Peter Simple' is generally welcome—fact from any one is welcome—but when a book is so written that it is impossible to distinguish the one from the other, we are inclined to denounce such gallimaufry as neither "fish nor flesh, nor good salt herring." In this state of perplexity the following letter, addressed to the *Spectator*, has arrived, and it will save us all further trouble.

"Paris, 14th November, 1843.

"I have just read a work entitled 'A Narrative of the Travels and Adventures of Monsieur Violet in California, Sonora, and Western Texas; written by Captain Marryat.' Such is the title page. In the preface, Captain Marryat states that the opinions and occasional remarks are not his—'I have merely *written* the work.'

"The portions of the work relating to Texas are in chapters 13, 19, 20, 21, 22, 25, 26, 27, and 32. Of the 'authenticity and correctness' of what M. Violet asserts, Captain Marryat declares that he has 'no doubt.' All the reviews of the work that I have seen conclude that it is a mere fiction; and it may probably be added to the number of literary curiosities if I illustrate the curious example of bookmaking, which this work presents, and at the same time confirm the opinion of its fictitious character.

"The second paragraph of chapter 13, with the exception of the last 18 words, is taken *verbatim*, and without a mark of its being a citation, from a small pamphlet, written by me, and published at New Orleans in May 1842, with my name on the title-page. The last 17 paragraphs of the same chapter are taken from a communication signed 'G,' published in the *Arkansas Intelligencer*, printed at the town of Van Buren, in the same year. The paragraphs 15, 16, 17, 18, 19, and 20 of chapter 19, giving a description of the missions of San Antonio de Bexar, are manufactured, with some patchwork, from an account of Texas and of the Santa Fé expedition published in the *Picayune*, a newspaper of New Orleans, by Mr. G. W. Kendall. The original description was written by me; Mr. Kendall, being on one occasion much pressed by his business, asked me to write for him a brief account of the missions, which we had both visited. I agreed to do so, and copied for him my notes, from my own journal, which is still in my possession. The account I wrote thus forms part of his narrative. If he should see this statement, I have no doubt that he will pardon my publication of the fact. The two last paragraphs but two, with the exception of some interpolated words about robberies, are also taken from my pamphlet; and are contained also in a letter to a friend in England, written by me at Matanzas, in Cuba, in April, 1842. Some passages in the same chapter, descriptive of the town and river of San Antonio, are borrowed from Mr. Kendall's own narrative.

"The greater portion of the 20th chapter is taken from Mr. Kendall's publication. Chapter 21 is derived from the same source, with the exception of about eight paragraphs, which interpolate a fictitious story of Indian cannibalism, in the place of the particulars given in the original of the massacre of a young Englishman, the only son of the late Major-General Trevor Hull, and five others of our party, who were suddenly surrounded by some Caygua Indians, when separated a short distance from us. Chapter 22, with the exception of some imaginary Indian talk, also owes its authorship to Mr. Kendall.

"Chapter 25 contains what is called 'the Mexican version' of the Santa Fé expedition, prepared from what M. Violet 'saw,' from 'what he heard on the spot,' and 'from Mexican documents still in his possession.' All the Mexican documents on the subject are accessible. They were published in the *Diario del Gobierno*, and in *El Siglo XIX.*, in Mexico. They include the accounts given of the expedition by the Mexican General Armijo, who was actually an eye-witness of what occurred in New Mexico: and they do not sustain a single fact of the 'Mexican version' of the expedition. In the course of that expedition no Wakoe or other Indian village was destroyed—no Indian stores were set on fire—and no Indian children were shot. We only found one inhabited Indian village along the whole route, over a previously unknown country, extending upwards of 700 miles, from the city of Austin to the Rio Puerco, or Mexican settlements. It was left undestroyed, and no Indian was killed. There were no Mexican shepherds nor any other Mexicans killed in New Mexico, and there were no sheep stolen. The story respecting a man named Golphin is a most extravagant invention. He neither killed a Mexican woman nor robbed her: his right hand had been perfectly disabled for some months before we reached New Mexico, and he had long been sick and infirm. He was shot by the Mexicans between the Indian village of Socorro on the Rio Grande and Paso del Norte, merely on account of his inability to walk. The other allegations against him and an alleged identification of him, are equally unfounded.

"There is then left, to preserve a claim of originality to 'Adventures in *Western* Texas,' abuse of the merchants of San Antonio; an Indian story for the neighbourhood of Trinity River, in *Eastern* Texas; a story about the passing of some forged notes at Galveston, in Eastern Texas, mentioned in chapter 27; a story in chapter 32, intended to represent the manner in which justice is administered in *Eastern* Texas; and lastly, a complaint against Judge Webb, who is alleged to have charged M. Violet for water, though the great freshwater river of the Colorado flows near his house, open to the access of every one.

"It is a remarkable fact that until the town of San Antonio was surprised by the Mexicans in the course of last year, its chief trade was in the hands of Irishmen. The principal Irish stores were those of Messrs. Elliott, Robinson, and Riddle. Where every man knew everything respecting his neighbour, I never heard anything against these persons, nor indeed against many others whom I could name; and Mr. Elliott was much respected by the Mexican as well as the American population. The town itself, though upon the very frontier, was exceedingly well governed.

"Any story of corrupt mal-administration of the law in America or in Texas, among the white population, I should always be disposed to doubt. The evidence that it is not corruptly administered is the general contentment of a most active, intelligent, and clear-sighted people with it, the facilities they possess to correct its abuses, and the confidence with which they invoke its protection. Exceptional cases to the contrary may sometimes occur in the west; but that which must strike any observer, who has lived only a few months in recently-settled districts, is the rapidity with which the influence and the power of the law is established. It is this legal control which has chiefly contributed to the prosperity of America. It is to be traced to the operation of the English laws which we gave to that country, and to our mode of procedure in civil and criminal cases, equally as much as to their own political institutions, which take away the desire and prove the inutility of obtaining constitutional changes through violence. How different would be the condition of the Spanish colonies of America if similar influences prevailed among them!

"I am, however, well aware of the immediate source of Captain Marryat's information. I should have been perfectly silent respecting it, if the materials he has used had been accompanied with comments of a generous character; but the feelings of Captain Marryat towards America are known to be very bitter and very hostile. He may justify them by his own experience, and by what he has heard; but the preface of this work proves the great extent of his credulity, while the thousands of British emigrants who annually settle in America, and who leave Canada to settle in it, support a more important conclusion, adverse to his opinions.

"I am so far from London that I have not the opportunity of sending to you the papers to which I refer. I have no doubt, however, that many weeks before I return to England, American papers will be received confirming what I have stated, and perhaps setting forth the claims of others to passages of the work not having any reference to its facts in natural history; which are so very odd, that it would puzzle the Zoological Society to ascertain in what 'unknown countries such unknown creatures can be expected to be met with.—Yours, &c.

"Thomas Falconer."

OUR LIBRARY TABLE.

Memoirs of Joseph Shepherd Munden, Comedian, by his Son.—These Memoirs, republished from the pages of a periodical, and not peculiarly rich in adventure and anecdote, will not detain us long. They possess, however, the merit of being free from that pretence and affectation—those washy outpourings of *Surface* sentiment, and stale odds and ends of green-room anecdote, so distinctive of books of this class, that a natural and unpretending record bears a value in our estimation. What is wanting is arrangement. The author wanders from actor to actor, from Garrick's *Macbeth* in a red coat, to "Quick and others," and too often treats his subject incidentally. It is true that he has little story to tell, beyond the facts that Munden was the son of a poulterer in Brook's Market, Holborn, where he was born *anno Domini* 1758—that he passed from an apothecary's shop to a law stationer's office, and from the latter to a clerkship in a municipal office at Liverpool—that, unable to control "his demon," he presently abandoned pen and parchment for the dear and dirty delights of a strolling player's life—that in this capacity he underwent the severe and incessant practice of his art, which is indispensable,—that he became a shareholder in the Chester Theatre (now an investment about as hopeful as a Poyais swamp, but times have changed), and played there in company with Cooke, Mrs. Whitlock, Mrs. Siddons's sister, who emigrated to America, and Mrs. Hunn, the mother of George Canning,—and that, in 1790, shortly after Edwin's death, he dared an appearance at Covent Garden, and succeeded. For thirty-four years he was the delight of the town, appearing successively at Covent Garden, Drury Lane, and the Haymarket; and then retired, wisely for his fame, resisting all efforts made to tempt him into the actor's folly of "more last appearances." Having acquired a competence in his profession, he became miserably penurious in his old age; died on the 6th of February, 1832, and was embalmed in the *Athenæum* by Elia. There is little in the volume to fill up this outline.

An Account of the Roman Antiquities found at Rougham, by Rev. J. Henslow.—The antiquities here described were found in September last at Rougham, near Bury St. Edmunds. While some labourers were digging on Eastlow Hill a large barrow in the parish of Rougham (Low being the Saxon for barrow), they discovered an iron lamp and one or two other remains, which induced the proprietor to dig systematically on the site of one or two smaller barrows in the vicinity. In one of these, which, from its containing burnt human bones, was pronounced to be of that species of Roman tomb called *bustum*, were found the following articles: an urn, of pale bluish glass, with two reeded handles and an eared mouth—the *ossorium*, or bone urn: a lachrymatory, or perfume vessel, of dull green glass: a very corroded coin: two black jars or jugs: a large spherical pitcher, of coarse yellow pottery, and another of the same character, but much smaller: a patera, of red ware, with the potter's mark on it, but almost illegible: two simpula, of similar ware, on one of which the potter's mark, Albuci, for *Albuci officinâ*, is very legible: an iron lamp, two iron rods, and some gold dust. The date of these barrows has not yet been satisfactorily determined, but Prof. Henslow seems to think, from the nature of the tombs, that there is good reason to believe them of the same date with the barrows at Bartlow, noticed by Mr. Rokewood, believed to be of the period of Hadrian; consequently, between the first and second centuries of our era.

The Theogony, Philosophy and Cosmogony of the Hindus, [*Die Theogonie, &c.*] by Count M. Björnstjerna, translated from the Swedish by J. R.—Count Björnstjerna, when in England, published a work on the British power in the East Indies. He has since directed his studies to the Theogony and Philosophy

Digitized by Google

of the Hindus, and the result of his researches are now before us. The views advanced are not new, as the author himself confesses. He agrees with Herder, Heeren and others, that India is "the cradle of religions, and the first abode of civilization." Count Björnstjerna, however, maintains peculiar views with reference to the general character of the Brahminical religion, which he holds to be a natural religion far superior to the mythology of Greece or Rome. Buddhism he imagines to be a collection of reforms in the Brahminical worship promulgated at different times, but all of course of later origin than Brahminism. In the Hindu cosmogony, the Count thinks he has discovered a key to the migrations of nations which, coupled with geological science, may, at some future time, lead to important consequences.

The Mayflower, or Sketches of Scenes and Characters among the Descendants of the Pilgrims, by Mrs. H. B. Stowe.—This American miscellany is commendable: though not very original in manner, it is full of American character. Silence, in "Love *versus* Law," "the housekeeper," with her trials, in the article "*Help*," "Uncle Jim," and "Old Father Morris," could neither have flourished on this side of the Atlantic nor have been so well described by an English pen. Mrs. Stowe writes professedly with the purpose of adding to the stores of wholesome, we might say religious fiction; and the Puritan flavour of some among them will be relishing, rather than repelling, to the mere critic.

Edward Somers, a domestic Story, and a Legend of the Coast, by the author of 'Poems by Viator.'—If old anecdotes, great vanity, and spiteful attacks on individuals and bodies can make a good book, then assuredly this must take rank among the best. The author is evidently an Oxford man, and takes care to let his readers know that he was at Christ Church College. The plot is old, and the telling of the story no improvement on the former versions.

Gleanings respecting Battel and its Abbey, by a Native—are gleanings for the most part of dry husks and long straws—from antiquarian stores. But the work is said to be the only published account of the Abbey, and the "gleaner" apologizes for its "crudeness and imperfections;" so we leave it to its fate.

One Word before you go, by J. G. Hengiston.—A loud appeal against a residence in France, or even a temporary sojourn at the French watering-places. Some truth, with much absurd exaggeration.

France—her Governmental, Administrative, and Local Organization, Exposed and Considered.—The writer is well acquainted with France, its government and administration, and the work has been compiled with elaborate care; but he is so fiercely opposed to what may be considered the general policy of Louis Philippe, and to Louis Philippe himself, that all he says must be well weighed and tested. From internal evidence, we are of opinion that it is the work of a practised writer, one accustomed to indulge in the habitual exaggeration of a party politician; and that the writer's name is not given, because it would only detract from the value which the public might otherwise attach to the opinions here advanced.

The British Almanac—The American Almanac and Repository of Useful Knowledge for the Year 1844. In addition to all the requisites of an almanac, these contain, as usual, much valuable information.

The Parent's School and College Guide, or Liber Scholasticus.—A work that will be found useful to parents about to determine on a school or college to which to send their children, setting forth, as it does, the benefits to be derived at each scholastic establishment in the United Kingdom. Such a work, however, to be useful, must be accurate; and we have noted more than one error on those points which come within our own knowledge,—as where the author states that Merchant Taylors' School has forty-three fellowships at St. John's College, Oxford, thus confounding six law exhibitions, which are but temporary, with fellowships which are permanent.

Simmonite's Juvenile Grammar of the English Language.—An abridgment of a larger work on English grammar, which was considered by "gentlemen practically engaged in the education of youth" to be too large and expensive for children.

Wood Pavement; its Origin and Progress, by A. B. Blackie.—An advertisement—to the effect of "try Stead's patent."

THE LIVING POLITICAL POETS OF GERMANY.

Liberty! ha! that sounds most wondrous fine!
It is the day's great word.....Away! away!—
O ye are pregnant with whole worlds divine,
Yet 'neath the yoke your necks so fondly lay.
What! to be free?—thereon we scarce dare reason;
Speak of it not till Caution's self be stronger;
But, write of it!—ha! that is rankest treason!
In short, this watch of Freedom—goes no longer!

Ortlepp's Songs of a Day-Watchman.

AMONGST the many curious phases which the present social and political state of Germany presents, there is none more singular than that exhibited in its political poetry. The system of paternal government is there so completely organized, and so beautifully carried out, that scarcely a restless motion can be detected in that great stalled ox, the Public, and if a groan escape it, it is so modulated by custom, that it may be mistaken rather for a low of too much rest and fulness, than an expression of pain. The police are so admirably distributed and posted in every city, village, street, field, lane, wood, and public-house; the censorship is so alert at its station in every printing and newspaper office, that not a sigh can escape through the press. The great net woven by the German governments for the accommodation, as they call it, of that many-headed animal, the Public, has been so scientifically constructed that not one of those many heads but is caught in a mesh, and the whole living fry is dragged along with wondrous ease. Then, this great and heterogeneous fry is not only so cunningly netted, and scientifically dragged along, but, it must be confessed, is so well fed, that he would seem to be a very unreasonable sort of fellow who would wish them out of their net at all. The learned are well supplied with professorships, librarianships, and secretaryships; the nobles with commands in army, and offices in cabinet and bureau; the middle ranks are all equally engaged and employed by these paternal governments in the thousand and never-wanting posts in the magistracy, the post-office, the police, the customs, the stewardships of forests and domains; nay, the very members of the common herd are universally distributed through all the more ordinary employments of justice-rooms, post-offices, railroads, travelling posts; as watchers of roads, of streets, of highways; as gens-d'armes, parish schoolmasters, scavengers, aye, as chimneysweeps, which are all in the patronage, or under the surveillance of government, that well may people ask, What do they want more?

Yet there are, as there always have been, and always will be in this discontented world, those very unreasonable people, who insist that a great deal more is wanted for the true developement of the true happiness and glory of a nation. They think that the grand thing needed, is that governments should let three-fourths of its present concerns alone, and leave them to the enterprise and competition of the public; and that they should grant the four great ????—as they are significantly called—the four great demands of Free Constitutions, a Free Press, Free Speeches, and Open Trials by Jury. On this the governments fairly lift their hands and eyebrows in astonishment, and through their hired scribes of the press, cry—"Look at France! see what Free Presses and Free Speech and Free Constitutions, did there? What blood! what horrors! what confusions!" "Nay," reply the discontented, "that was the previous work of despotism." "Look at England!" exclaim the government scribes, "see, with all its free institutions, what a debt! what continual agitation! what horrid masses of poverty in its manufacturing districts, and in its very capital!" "Set all that down," retort the advocates of freedom, "to invasions of the British Constitution, and not to the free constitution itself; and then set on the other side—what national wealth! what national activity! what fleets of merchantmen, what merchant princes! what colonies! what a stupendous empire stretching round the whole globe! What a noble fabric of free mind is there raised! How every man, however oppressed by debts and exactions he may be, dare, like a man, look his governors in the face, and at least demand redress, justice, and the proper administration of a representative constitution!" They will insist that men who go about with bridles in their mouths, are not men, are not even horses, but something lower and less noble, that is, mules. They will insist, that if whole nations are to be held like children in go-carts and leading-strings, and never suffered to arrive at a majority like other children, they will cease, spite of all coercion, to be children, but will not become nations of men—for Nature will not be resisted with impunity—but of idiots and drivellers; that it is only by the exercise of all their faculties, and amongst them pre-eminently their faculty of freedom, that men and nations acquire their full strength, display their full powers, and attain the glory and happiness which God and Nature have placed within their reach. Nay, they add, that the very stalled ox will be visited in his pampered rest, with visions of open fields, green mountains, and river banks; the caged bird (and what objects on earth so wretched as caged eagles!) even in a golden cage, will dream of woods and wilds of wide liberty, and languish after them; and the very fish in the most fine and philosophical net, will think of the broad space of waters in which they have revelled, of the clear springs which gush into them, of the depths of sweet gloom beneath the shadows of woods where they have ranged, and will flash and flap in agony at the tantalizing idea.

So think the free spirits of Germany. So think, no doubt, thousands who, themselves provided by paternal governments with all the creature comforts of office, dare not, and do not, utter such ideas; and, indeed, what help? The system, as we have said, is so thorough and artistically perfected; the numbers who are engaged in it by all the hopes and comforts of life, are so numerous; the pressure is so equal and universal, that it can be no ordinary combination of powers or circumstances which can alter it. The paternal tile which is laid upon the acanthus of freedom, is so stout and broad, that it is impossible for this acanthus to heave it off, or to bore its way through it; it does, therefore, only what it can—it curls up all round its edges, and gives birth, not to a new order of architecture, but to a new order of poets!

These are the men of whom we are now about to speak. There never, indeed, have been wanting in Germany poets who in their songs, and even epics, have fanned the fire of freedom, and breathed through their fellow-men that hallowed soul of liberty, without which men and nations must die to all that is great and noble. From the days of Walther von der Vogelweide, these men have never been wanting. Walther himself, Hans Sachs, the tower-fast Luther, in his hymns as much as in his sermons or his Table-Talk, Weckerlin, Martin Opitz, Logau, Johan Riss, Gryphius, Assmann; and amongst those of the revival of

Digitized by Google

German poetry, Klopstock, Gleim, Bürger, Herder, and a host of others, to Schiller, whose noble soul, thoroughly permeated by all that was great and generous, acted on the minds of his cotemporaries like a summer heat, making it thrust forth its shoots on all sides, and ripening it to richness even when no political word was spoken. Even Goethe, who sunk into the worldling and the courtier, and while the thunders of the war of oppression and of the war of freedom bellowed round his study, sate calmly, lifting neither hand nor voice for the fatherland, but entered in his journal, as the visitants of one of his later birth-days, the two words, "Metternich" and "Hardenberg!"—even this great defaulter in his country's cause, in some of his earlier and better works, had contributed to the great mass of liberal opinion; and Uhland had, both as popular representative in the national chamber, and in his ballads, made his high and independent voice heard like a trumpet; and far and wide were those trumpet-tones heard, and felt, and responded to. Even on Austria he called boldly and sternly:—

Up, mighty Austria!
Forwards! do like the rest!
Forwards!

And while Uhland sits in his age, freed by his hereditary property from any dependence on princes, he is honoured throughout all Germany as something far above a prince—the genuine patriot poet—the most glorious and divine amongst the titles of men. We shall soon see that even from the very heart of Austria a zealous echo to his fiery appeal came back to him and the whole nation, and besides, on all hands, glowed in the poetry of Platen, Börne, Rau, Heine, Hagen, Deeg, Welter, Lenau, Immermann, Chamisso, Freiligrath, and a host of others, the Uhlandish and the national spirit. But these, for the most part, uttered their political oracles either amid the heap of their other poetic inspirations, presented the little glittering rose of patriotism wrapped in the bouquet of many poetic flowers, or clothed their patriotic calls in general terms. There were more fiery, or more impatient spirits, who resorted to poetry as to a special and exclusive vehicle of their political discontent—who looked round them, and saw scarcely any other mode of reaching the ears of their countrymen with the words of liberty. The pen of the censor had become omnipotent over the pen of every other writer. It hung, in the shape of a *Black Eagle*, over all the other feathered creatures, were they poets or politicians—did they speak exciting words in the midst of their own volumes, or in the columns of a journal. Most of those writers of whom we have spoken, especially those of late years, had many grievous secret wounds to complain of from the point of the censor's pen—from the great pen plucked from the wings of the Black Eagles. They could tell of much Burking in the dark; of many a plaster clapped on their mouths in the secret passages and dens of the censorship; of much suffocation and strangulation. The class of young and ardent spirits of whom we now speak determined, therefore, not to expose themselves to the talons of the Black Eagles—to the scalping and mutilating processes of the censorship; but to concentrate all their fire in small compass; to print their little books beyond the jurisdiction of the national literary anatomists. They considered that it is one thing for creatures to be strangled in the dark, and the stranglers then to cry, "These were abortions!"—one thing for honest men to be stabbed in the dark, and the murderers, clothed in police costume, then to cry, "Ay, these were thieves!" and another thing, when the truth was fairly issued to the daylight, for the hardiest and most hypocritical rogue of them all to dare to suppress it. They therefore printed their little volumes either in the free city of Hamburg or in Switzerland, and the result justified their calculations. From Hamburg, from the bold house of Hoffmann & Campe, or from Bern, Zürich, Schaffhausen, &c., accordingly came flying whole showers of these poetico-political volumes. They were everywhere eagerly caught up, and are now to be had in all shops. Not one of them would have ever seen the light if the claws of the black eagles could have been set upon them in manuscript: but once in the light, no man is so bold and honest as to say, "These are the prophets of liberty, and must, therefore, be stoned to death!" They are, and will remain. They are adopted by the people, and will do their work, be that more or less. These little tomes are almost as numerous as the snowflakes from the Swiss Alps themselves: like them, many, indeed, fall and melt on the spot. Others have excited the most lively feeling, and are become generally popular. What is most remarkable, is, that the first, and perhaps the most powerful, the earliest, and by the others regarded as the heart and leader of the school, is not only a nobleman, but a nobleman of Austria.

Count Auersperg, better known by his assumed poetical cognomen of Anastatius Grün, is well known in that character as a poet of great elegance and fancy, but in this little volume called 'Spaziergänge eines Wiener Poeten'—Walks of a Viennese Poet—he spoke in a strain of equal fire and boldness. True, he did not put on the title-page of that little volume of 106 pages even the *nom de guerre* of Anastatius Grün. It was issued to the world from the press of Hamburg anonymously; but it was issued at a time when a single spark was enough to kindle and spread a wide and devouring fire. It was about the time of the Parisian Revolution of July, 1830. This rapid and brilliant revolution went like an electric flash throughout all Europe. All people who had grievances to complain of from their governments—and which had them not?—raised their heads, and called loudly for redress and constitutional rights. Switzerland, Germany, Belgium, Poland, Spain and Portugal, England, Italy, and almost every state of Germany, rose in active commotion. For two years the ferment went on. The Belgians achieved their object; England reformed her parliament; the different states of Germany, even to Bavaria and Prussia, were shaken with political agitations for popular chambers, freedom of the press, and the like, which, in some of the smaller states, were, to a degree, successful. But the princes and their armies, both of soldiers and police, were too strong. Poland, Italy, and Switzerland felt the heavy hands of Russia and Austria, and the larger German states were coerced. The great Radical meeting at the Castle of Hambach, in Rhenish Bavaria, in 1832, gave a pretext to the princes of the German Confederation: the reign of arrests and police severity began. The patriots fled on all sides, and press and speech were put into their ancient bondage.

Exactly at this crisis appeared the second edition of Count Auersperg's 'Walks.' Its effect may be imagined. For a time it seems to have been secretly devoured with the keen relish which that sacred writer so well described when he said, "Stolen waters are sweet." At length, however, as the restrictions on political freedom were continued; as the promises of the princes of free constitutions were falsified: when Hanover, robbed of the constitution given it by our William the Fourth, cried to the "Bund" for help against despotism, and received only the startling reply, that the Bund could take no cognizance of any complaint which did not come through a *government* channel—in other words, that the Confederation was a confederation of princes, not for, but against the people; then broke forth a tribe of zealous followers in the Count's train. The most effective of these, however, are such as have appeared within the last two years.

We must give a specimen or two of the Count. He wanders forth into the country to breathe the fresh air, and seated on the Cobenzlberg above Vienna, writes "Spring Thoughts." Charmed by the landscape before him, he wishes that the Emperor were sitting even there, and would cry to the vale beneath—"Austria! thou Land of the East, let it be day in thee!" He recals the great deeds of its armies, and asks whether in its campaigns Right, and Light, and Freedom always stood as warrior allies in its ranks; to which he is obliged to respond that "the answer is not sweet." In the next poem, however, he so admirably touches off Metternich that we must translate wholly the—

Saloon Scene.

'Tis evening; flame the chandeliers in the ornamented hall;
From the crystal of tall mirrors thousand-fold their splendours fall.
In the sea of radiance moving, almost floating, round are seen
Lovely ladies young and joyous, ancient dames of solemn mien.
And amongst them staidly pacing, with their orders graced, elate,
Here the rougher sons of war, there peaceful servants of the state.
But observed by all observers, wandering mid them one I view
Whom none to approach dare venture, save th' elect, illustrious few.
It is he who holds the rudder of proud Austria's ship of state,
Who mid crowned heads in congress, acting for her, sits sedate.
But now see him! O how modest, how polite to one and all;
Gracious, courtly, smiling round him, on the great and on the small.
The stars upon his bosom glitter faintly in the circle's blaze,
But a smile so mild and friendly ever on his features plays:
Both when from a lovely bosom now he takes a budding rose,
And now realms, like flowers withered, plucks and scatters as he goes.
Equally bewitching sounds it, when fair locks his praise attends,
Or when he, from heads anointed, kingly crowns so calmly rends.
Ay, the happy mortal seemeth in celestial joys to swim
Whom his word to Elba doometh, or to Munkat's dungeons grim.
O could Europe now but see him! so obliging, so gallant,
As the man in martial raiment, as the church's priestly saint,
As the state's star-covered servant, by his smile to heaven advanced,
As the ladies, old and young, are all enraptured and entranced!
Man o' th' Empire! Man o' th' Council! as thou art in kindly mood,
Show'st thyself just now so gracious, unto all so wondrous good,
See! without, a humble client to thy princely gate hath pressed,
Who with token of thy favour burns to be supremely blessed.
Nay! thou hast no cause of terror! he is honest and discreet,
Carries no concealed dagger 'neath his garments smooth and neat.
It is Austria's People!—open,—full of truth and honour—see!
How he prays most mildly, "May I—*take the freedom to be free?*"

In "Priests and Parsons," and in "The Fat and Lean," the Count compares the good and mischievous clergy, expressing his love and reverence for the one class, and his indignant hatred of the other. It is a curious fact, that while popery has been growing more and more popular, and winning proselytes where it has ceased politically, and its old features have become forgotten, in those countries where it has continued most prominent, it has been suddenly attacked by the people, as in Spain, or so far as any interference of the papal power is concerned, has been, by the very governments, politically annihilated. In the two great catholic states of Germany, Austria and Bavaria, where the mass of the people, and where the monarchs themselves are strictest catholics, there, though the religion is upheld, the papal power has been put down by the governments. Popery and the Jesuits are especial objects of detestation with the German liberals, and they do not forget that Metternich, the most wily of all wily ministers, was the man who hit on the grandest discovery in political despotism ever yet made—that of converting *National Education* into the basis and great engine of slavery.

When despotic Princes began to tremble before the advance of popular knowledge, Metternich only smiled. He called to mind the words of Solomon—"Bring up a child in the way that he should go, and when he is old he will not depart from it." "That," thought he, "which is good for one way, is equally good for another. Bring up a people in *any* way, and when they are old they will not depart from it. Here, then, is a great political light! Seize the principle—apply it to the nation, instead of letting your enemies, the liberals, apply it. Bend the twig while it is young, and all the powers on earth shall never be able to raise it again!"

Austria was the first to adopt this grand discovery—the principle of a *Government Education* as a *National Education*, and that with a success which caused it to be immediately copied, and carried out with the most conclusive results in Prussia; where, while the unsuspicious liberals of England have been watching to see the growth of a universal knowledge amid the people blow up the Prussian despotism, it has been, by a subtly adopted system, by which the national schoolmasters became half schoolmasters and more than half policemen, perhaps rivetted for ever. We have alluded to this subject merely to show why the modern political poets so bitterly denounce popery and priestcraft, and, passing over Count Auersperg's poems on these subjects, shall content ourselves with two short ones—the 'Mauthcordon' (Cordon of Customs) and 'The Censor.'

The Customs Cordon.

Our country is a garden, which the timid gardener's doubt
With an iron palisado has enclosed round about;

Digitized by Google

But without live folk, whom entrance to this garden could make glad,
And a guest who loves sweet scenery, cannot be so *very* bad.

Black and yellow lists go stretching round our borders grim and tight;
Custom-house and beadle watchers guard our frontiers day and night—
Sit by day before the tax-house, lurk by night i' th' long damp grass,
Silent, crouching on their stomachs, louring round on all who pass,

That no single foreign dealer, foreign wine, tobacco bale,
Foreign silk, or foreign linen, slily steal within their pale;
That a guest, than all more hated, set not foot upon our earth,—
Thought, which in a foreign soil, in foreign light has had its birth!

Finally the watch grows weary, when the ghostly hour draws near,
For in our good land how many from all spectres shrink in fear!
Cold and cutting blows the north-wind, on each limb doth faintness fall;
To the pot-house steal the watchers, where both wine and comfort call.

See! there start forth from the bushes, from the night-wind's shrouding wings,
Men with heavy packs all laden, carts up heaped with richest things.
Silent as the night-fog creeping, through the noiseless tracks they wend;
See! there too goes *Thought* amongst them—towards his mission's sacred end!

With the smugglers must he travel,—he who nothing hides from sight!
With the murky mists go creeping—he the son of Day and Light!
Oh! come forth, ye thirsty drinkers! weary watchers, out! —this way!
Fling yourselves in rank and file—post yourselves in armed array!

Point your muskets! sink your colours, with the freeman's solemn pride!
Let the drums give joyful thunder—cast the jealous barriers wide!
That with green palms all victorious, proud and free in raiment bright,
Through the hospitable country THOUGHT may wander scattering light!

The Count extends his walks mid the charms of the spring, and asks when shall the spring of freedom bloom thus in his country? He sits in the garden bower of a country inn, enjoying the delicious scene before him; a stranger approaches with a friendly face, and seats himself beside him; but, suspecting that he may be a police spy, the Count hastens away and, plunging into a neighbouring wood, weeps burning tears over the spirit of distrust which the government infuses between man and man. He paces the field of Aspern, and thinks how the freedom of Austria was achieved there only to be lost again. A swallow flying southward awakes in him the question "Whither?" which is echoed by another question—"Whither are the princes of Austria conducting the country?" To which he gives them answer: To a reign of hypocrites when no man dare look another in the face; when the monks' censers are busy wafting the incense of flattery; when geese flourish, and are never plucked, for there is no press, and no need of pens,—except for the tax-gatherers; when the professor shrinks from his own students, who present before him but two classes,—savage cannibals, and youths who still have some ideas; when an imperial ediet is passed to extinguish all lamps, as people can very well find the way to their mouths without them; and when priests rejoice in the perpetual midnight, exclaiming "What a beautiful day!" but the very dead remove with coffin and shroud to a more genial resting-place. In 'The Victory of Freedom,' the 'Hymn to Austria,' 'Maria Theresa,' 'The Statue of Joseph II.,' 'The Right of Hospitality,' address 'To the Emperor,' &c., abound the same noble, free, and generous thoughts, the same keen irony; but we must hold to our purpose, and give only—

The Censor.

Many a hero-priest is shown us in the storied times of yore,
Who the word of truth undaunted through the world unceasing bore;
Who in halls of kings have shouted,—"Fie! I scent lost Freedom's grave!"
And to many a high dissembler bluntly cried, "Thou art a knave!"

Were I but such Freedom's champion, shrouded in the monkish frock,
Straight unto the Censor's dwelling I must hie, and loudly knock;
To the man must say,—"Arch scoundrel, down at once upon thy knees,
For thou art a vile offender—down! confess thy villanies."

And I hear the wretch already how he wipes his vileness clean—
"Oh your reverence is in error, I am not the man you mean!
I omit no mass, no duty, fill my post with service true;
I'm no lewd one, no blasphemer, murderer, thief, or godless Jew!"

But my zeal indignant flashes from my heart in flaming tones,
Like the thunder mid the mountains in his ear my answer groans.
Every glance falls like an arrow cutting through his guilty heart;
Every word is like a hammer which makes bone and marrow part.

Yes! thou art a stock-blind Hebrew! for thou hast not yet divined,
That for us, like Christ all glorious, rose too—Freedom of the Mind!
Yes! thou art a bloody murderer! doubly curst and doubly fell,—
Others merely murder bodies—thou dost murder souls as well!

Yes! thou art a thief, a base one, or by heaven! a fouler wight!
Others to steal fruits do merely leap our garden fence by night;
But thou, wretch! into the garden of the human mind hast broke,
And with fruit, and leaf, and blossom, fell'st the tree too at a stroke!

Yes! thou art a base adulterer! but in shame art doubly base—
Others burn and strive for beauties that their neighbours' gardens grace;
But a crime inspired by beauty for thy grovelling soul's too poor:
Night and fog and vilest natures can alone thy heart allure.

Yes! thou art a foul blasphemer! or by heaven! a devil born!—
Others wood and marble figures dash to pieces in their scorn;
But thy hand, relentless villain! strikes to dust the living frame,
Which man's soul, God's holy image, quickens with its thoughts of flame.

Yes! thou art an awful sinner! true, our laws yet leave thee free;
But within thy soul in terror rack and gallows must thou see.
Smite thy breast then in contrition, thy bowed head strew ashes o'er;
Bend thy knee—make full confession,—"Go thy way and sin no more!"

Can this zealous and able champion of freedom have abandoned the great cause of his country? So suspect, and so accuse him, the greater part of his followers. In the *Allgemeine Zeitung* of Feb. 13th, 1840, appeared this paragraph, from a Viennese paper—"Anastatius Grün has been some days here to solicit for himself the golden key of Gentleman of the Bedchamber, as his wife, hereditary Countess Attems, has been created Lady of the Order of the Starry Cross, and cannot go to court alone. It is said the Count has completely renounced the poet." On this, great has been the outcry and indignation throughout all "Young Germany;" and every radical poet has fired off at him his poetico-political blunderbuss. We do not, however, spite of all the court metamorphoses that our times have shown, lightly credit the apostacy of such a spirit. It is more likely that the Count sees clearly that he has done all that he can at present do, and without wishing to make a useless martyr of himself, leaves the seed he has sown to grow and produce its natural fruits.

The songs of Dingelstedt, Hoffmann, Dalei, Herrwegh, Ortlepp, Scherr, and Püttmann, we reserve for another paper.

OUR WEEKLY GOSSIP.

AT the Anniversary Meeting of the Royal Society, held on Thursday last, the following noblemen and gentlemen were elected the Council of the Society:—PRESIDENT—The Marquis of Northampton. TREASURER—Sir J. W. Lubbock, Bart., M.A. SECRETARIES—P. M. Roget, M.D.; S. H. Christie, Esq., M.A.—FOREIGN SECRETARY—J. F. Daniell, Esq. OTHER MEMBERS OF THE COUNCIL—M. Barry, M.D.; *W. Bowman, Esq.; Sir T. M. Brisbane, K.C.B.*; H. J. Brooke, Esq.; R. Brown, Esq. D.C.L.; *W. F. Chambers, M.D., K.C.H.; G. Dollond, Esq.; T. Graham, Esq., M.A.*; J. T. Graves, Esq., M.A.; R. Lee, M.D.; W. H. Miller, Esq., M.A.; *R. I. Murchison, Esq.; R. Owen, Esq.; J. Pereira, M.D.; Captain J. C. Ross, R.N.; J. Walker, Esq.* [The gentlemen whose names are printed in italics were not Members of the last Council.]

Mr. Monck Mason is exhibiting, at Willis's Rooms, a large model of a Balloon propelled by machinery. The balloon is supported in the air by the ordinary means of hydrogen gas; the propelling power is the Archimedean screw, worked, in the model, by a spring wheel; and the balloon can be made to ascend or descend, to a limited extent, by raising or lowering an attached rudder. The contrivance is ingenious, and the experiments were successful. As it is not offered as a model of an aerial locomotive by which road and railway travelling are to be superseded, we are not called on to point out those inherent defects which would prove insurmountable obstacles to any such practical application of it.

The French papers mention, that a telescopic comet was discovered at the Paris Observatory on the morning of the 22nd, at one o'clock. It was near the star γ Orionis. The nucleus is very distinct. It has since been seen in England.

In our remarks last week on the establishment, at the School of Design, of a class for the instruction of females in wood-engraving (*ante*, p. 1048), we adverted to the importance of skill in drawing the figure, as an essential qualification for success. We have been since informed, and think it well to make the fact known to those who desire to attain this skill, that the study of the figure now forms part of the routine of Mr. Butler Williams's classes for model drawing, established under the sanction of the Council of Education, and formerly held at Exeter Hall, but lately removed to the Gallery in Maddox Street, Hanover Square. These classes meet in the evening, and, the instruction being afforded at a very small charge, are available to persons engaged during the day. The practice of drawing from models is so superior to the old method of copying prints, that the progress of the scholar is much more rapid and certain, both as regards knowledge of form and dexterity in using the pencil.

The sale of Cardinal Fesch's magnificent gallery is fixed to take place at Rome in March next. No gallery in Italy is, it is said, so rich as this in the multitude and diversity of schools. There are many first-rate pictures of Holbein, Vanhuysen, Teniers, Backhuysen, Rembrandt, Vandervelde, Wouvermans, Sneyders, Jan Steen, Rubens, Vandyke, Ruysdael, &c.; capital works of Raphael, Leonardo da Vinci, Guido, Titian, Andrea del Sarto, Giulio Romano, Albano, the Carracci, Beato Angelico, &c.; many of Watteau, Lesueur, Claude Lorraine, Greuse, Poussin, &c.

The people of New York are, it seems, about to achieve an architectural prodigy, to be erected in commemoration of American Independence, and be designated the *Washington Memorial*. The structure is to be an immense pentagonal tower crowned with a spire, and therefore we hardly need say that the style selected for it is Gothic—the very last we should have thought likely to be adopted for such a commemoration, it being one eminently expressive of the Old World—of mediæval Europe and its institutions. Classical architecture is a sort of common property, and carries with it no mark of nationality; it has, moreover, already established itself in the New World,—but in regard to Gothic, the case is different: that style has hardly been attempted—certainly not with success; and, judging from the drawing exhibited in the *Builder*, we should say that this colossal work will prove quite a Babel Gothic affair—such a curious medley as must shock without electrifying the sticklers for precedent. There are, however, some original and novel ideas in it—one of which is a glass spire—or rather a glazed one, formed of metal ribs and bars, not, however, in imitation of such open-work spires with flowing tracery as that at Freiburg, but with a mere checked or diamond pattern.

The career of a second English *prima donna* has been prematurely cut short by a matrimonial alliance. Last year, about this time, Miss Adelaide Kemble's marriage took place; last week Miss Clara Novello was married to Count Gigliucci, of Fermo, in the Roman states; and she also retires into the privacy of domestic life. A sterner fate has deprived the stage of a popular and agreeable comedian, Mr. Benjamin Wrench, who for upwards of thirty years has been constantly amusing London audiences at one theatre or another: he died of asthma, on the 23rd ult. His last character was that of *Captain Dudley Smooth*, in Sir E. Bulwer's play of 'Money,' in which he made quite a hit by his gentlemanlike ease and address: indeed, whether he played a *Jeremy Diddler*

Digitized by Google

or a *Belcour*, he was alike free from vulgarity and affectation. Mr. Wrench was of good family, and educated for the church, but his passion for the stage was not to be restrained. We believe he was unmarried, his brother and sister, Captain and Miss Wrench being mentioned as his only surviving relatives.

It is reported, that Mr. Macready, on his return from America, will assume the management of the Lyceum. We should be glad to have this rumour confirmed, being of opinion that the only chance for the restoration of Tragedy in the present state of the stage, is the establishment of a well chosen corps at a moderately sized theatre, under the direction of a man of experience and energy. When no less than seven minor theatres adopt a French melo-drama of crime and wretchedness, such as 'The Bohemians, or the Rogues of Paris,' which was first introduced at the Adelphi a few weeks ago—a medley of horrors and vulgarities, with something of 'Jack Sheppard' and 'Tom and Jerry' in its composition—there is little chance for the Shakspearian drama in those quarters.

We perceive that Sir Henry R. Bishop has resigned his Professorship at Edinburgh; the reason alleged being bad health. The situation, if treated otherwise than as a sinecure, must require no common attainments. The musician for "the Northern Athens" should be a good speaker, and apt at his pen, too, if needful; nor without a thorough understanding of that debateable land on which Art, Literature, and Science meet. Qualifications like these are increasingly required everywhere from the professor (not practitioner), but they seem to us indispensables for the metropolis of Scotland, and may be reasonably looked for, the liberality of the endowment considered.

Rumours are abroad promising, for our French theatre next season, Madame Albert, Mdlles. Plessis, Déjazet, and Beauchène; MM. Levassor, Achard, Volnys, and Cartigny—every one, in short, but the actor of actors, Bouffé, who is said to be unwilling to present himself, without having made some additions to his repertory. This, owing to the warfare between his late manager (of the *Gymnase*), and the dramatic authors of Paris, has been impossible; and M. Bouffé has felt his position so intolerable, it seems, that he has left his old haunt for the *Variétés*,—the management of the latter paying to that of the former theatre the sum of 100,000 francs (4,000*l.*), forfeited by the actor on breach of his engagement. Bouffé has contracted with the *Variétés* for nine years.—Donizetti's 'Maria di Rohan' (Monsieur Tonson again!) has been very well received at the Italian Opera in Paris. A new work, by Sig. Persiani, 'Il Fantasma,' is said to be in preparation, while the manager of *L'Opéra Comique* has revived 'Une Folie,' by Méhul.

Notwithstanding all that has been said, and will possibly be sung, about royal progresses, the Artist is now the potentate who carries off the honours. At one and the same moment we receive news of a brilliant farewell given to Mademoiselle F. Elssler, at Hamburgh—we read how M. Liszt has founded a presentation to the Blind School at Munich, and been received at Stuttgardt, by an illumination from the people, and a cordiality little short of an embrace from the King; and how Mr. Macready is enticing those in the scrupulous city of Philadelphia, who never went to plays before, to enjoy his interpretations of Shakspeare. Madame Cinti Damoreau and M. Artot the violinist seem also to have been well received in the United States, though "with a difference." The journals are struck with the taste, delicacy, and consummate skill of the lady's—toilette.—At St. Petersburgh the new Italian theatre was, last month, inaugurated, by the representation of Bellini's 'Il Pirata,' with Tamburini in the leading part. The prices for the occasion had been raised to sums varying from 100 to 800 roubles (1*l.* to 8*l.*), yet the theatre was filled to the roof. The 'Barber of Seville' has since been produced, the parts filled by Rubini (the collector of the company), Tamburini, and Madame Viardot-Garcia, creating an enthusiasm in the house—the Emperor's share of which led him on to the stage, to express his thanks to the actors in person. 'Otello' and the 'Gazza Ladra' are to follow.—At Berlin, the reconstruction of the Opera House proceeds rapidly; and its opening is promised for the 15th of October (the King's birthday) in next year.—a new opera by M. Kucken is spoken of. We learn also that the Hellenic circle of that capital is preparing for representation, on its own private theatre, and by amateurs of the highest rank, 'The Frogs' of Aristophanes. A new German translation has been made for the occasion by Prof. Franz, and set to music by Herr Commer; and the costumes and decorations have been got up under the directions of the distinguished Hellenists, Herrn Boeckh and Hermann.—At Milan, a new ballet, in seven tableaux, by Bernard Vestris, has been produced at the *Scala*, under the title of 'Caterina Cornaro,' taken from Halévy's 'Reine de Chypre,'—and of which report speaks highly.

From Stockholm, it is stated that a banquet was given on the 11th ult., by the Royal Academy of Sciences in that capital, in honour of the sixty-fourth birthday of Berzelius; the same day being also the twenty-fifth anniversary of the nomination of that illustrious man to the office of Secretary of the learned body in question.—From Copenhagen, we hear that Thorwaldsen has completed the colossal statue of Hercules, destined, with those of Æsculapius, Minerva, and Nemesis (all colossal, and of bronze), to adorn the façade of the royal residence, the Castle of Christianburg.

The German periodicals speak highly of a new work by Dr. G. F. Waagen, on 'The Arts and Artists of Germany.' One volume only is published, which contains his remarks on the arts in Saxony and Franconia. Among the works announced as shortly to appear, the most interesting are—Alexander von Humboldt's 'Kosmosor, a Sketch of Physical Geography;' 'A Collection of old High and Lower-Saxon Popular Songs (Volkslieder), with Dissertations' by the poet Uhland; a new novel of Frederika Bremer, to be entitled, 'The Diary.'—In Berlin, the new work by Bettina has given rise to many speculations—some journalists cannot comprehend even the title, which is 'Dies Buch gehört dem König;' others are astonished at the price, and wonder that the "Frau Rath" (for the book principally contains recollections of Goethe's mother) could so clearly foresee the present state of society in Germany.—Eckermann has collected another volume of Conversations—or rather recollections of conversations—with Goethe.

DIORAMA, REGENT'S PARK.

NOW OPEN, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. REMOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Four.—N.B. The Gloria, from Haydn's Service, No. 1, will be performed during the midnight effect of the Cathedral of Notre Dame.

ROYAL POLYTECHNIC INSTITUTION.—BRILLIANT EFFECTS are produced by ARMSTRONG'S HYDRO-ELECTRIC MACHINE at three o'clock, and at Eight in the Evenings (except Saturday Evening). By LONGBOTTOM'S OPAQUE MICROSCOPE the singular Optical Illusion of converting a Matrix into the appearance of being a Cast in bold relief, is exhibited, with a variety of other curious effects. Particulars of the CHEMICAL and PHILOSOPHICAL LECTURES, which are delivered Daily, are suspended in the Hall of Manufactures. DISSOLVING VIEWS. DIVER and DIVING BELL. Numerous STEAM ENGINE and other MODELS at work. The original CRAYON DRAWINGS of RAPHAEL'S CARTOONS, &c. &c.—Admission, One Shilling.—Schools, Half-price.

SCIENTIFIC AND LITERARY

ASIATIC SOCIETY.—*Nov.* 25.—Prof. Wilson in the chair. Lieut. Cruttenden was elected a non-resident member.—The Secretary concluded the reading of the paper, 'On the History, Geographical Limits, and Chronology of the Chera Kingdom,' by Mr. Dowson.

BOTANICAL SOCIETY.—*Nov.* 17.—J. E. Gray, Esq. President, in the chair.—Dr. Bromfield presented a species of Calamintha, new to the British Flora, discovered by him in the Isle of Wight. Read 'Notes of a Botanical Excursion taken in Warwickshire, Worcestershire, Wales, and Ireland,' by Mr. S. P. Woodward. At the last meeting (*ante*, p. 1011), specimens of *Borkhausia setosa*, D.C. were exhibited, collected by Mr. Cumming, at Audley End, Essex, in 1841, and Mr. G. S. Gibson presented specimens of the same plant, collected by him at Sampford, in the same county, during the present year.

LINNEAN SOCIETY.—*Nov.* 22.—E. Forster, Esq., in the chair. D. W. Mitchell, Esq., was elected a Fellow.—A continuation of Mr. Griffith's paper on the Rhizantheæ was read. In conclusion the author criticized the position in which Blume and Endlicher had placed this portion of the vegetable kingdom. He came to the conclusion that there was not sufficient ground for the separation of these plants as a distinct class; that even as an artificial arrangement it was not warranted by utility, and that such a deviation from the ordinary principles of classification was unphilosophical. A description was given of a new genus of Rhizantheæ, called Sabria, which had been discovered by the author in Assam. The genus Sabria holds a position between the genera Brugmansia and Rafflesia. The paper was illustrated by drawings of dissections of the *Sabria Himalayana*. This plant was found parasitic on a species of Cissus, which is abundant in the Himalaya.

NUMISMATIC SOCIETY.—*Nov.* 23.—The President, Lord Albert Conyngham, in the chair.—Gen. Stacey and T. Lott, Esq., were elected members.—Mr. Smith exhibited another variety of a new type of British or Gaulish coins, brought before the notice of the society during the last session. It is in gold, and was found on Titchfield Hill, Hampshire. On the obverse, within a label, are the letters "TINC;" on the reverse, a horseman hurling a javelin; beneath, the letters C.F. The latter Mr. Smith considered to be copied from one of the Roman consular coins. A paper was read from Mr. Dickenson on the gold rings used as money in the interior of Africa. Mr. Akerman then read an account of some gold coins of the French kings of the first race, found, together with some jewels and gold ornaments, by C. E. Lefroy, Esq., at Crondale, in Hampshire, near an eminence called Cæsar's Camp. At the period when these coins were struck, namely, the fifth and sixth centuries, the coinage minted in England was confined to silver and brass, while in France it was exclusively in gold. Some of these coins, however, would appear to present an exception to this received rule, for they bear on the reverse the word "LYNDYNI," from which Mr. Akerman is of opinion they are of English origin, and were minted in London.

SOCIETY OF ARTS.—*Nov.* 22.—Thomas Hoblyn, Esq. V.P. in the chair. The following were elected members of the Society: J. Farey, W. P. Bodkin, S. Hall, W. Fairbairn, R. Warrington, G. Pownall, G. Boccius, W. Prosser, J. Farrell, J. T. Cooper, J. H. Mott, J. Alexander, S. Geary, A. A. Croll, R. Penny, W. Crosskill, J. Marriott, and J. Emslie, Esqs., Drs. Lees and Atkin, and Messrs. Westley, E. W. Trent, Gad, Colville, Dower, Jones, and G. A. Paine.

The Secretary read a paper, by Mr. Dircks, 'On the Smokeless Argand Furnace' of C. W. Williams, Esq., of Liverpool, long since noticed in this journal.

Nov. 29.—B. Rotch, Esq., V.P. in the chair.—R. Bethell, T. Grant, H. Banks, and R. Sheppard, Esqs. were elected members.—The Secretary read a paper by Mr. H. K. Dyer, 'On the Metallic Sand.'—This sand is produced by grinding copper slag by means of powerful machinery, and consists of iron, zinc, arsenic, and silica, the iron predominating; the slag is procured in abundance in Swansea. In chemical analysis it is very similar to the pozzolano, and in point of durability is found to be equal to the latter. With blue lias lime, which is used for hydraulic works, the metallic sand readily enters into combination, and these having been used together for external works, exposed to all the changes of the atmosphere, have proved the indurating qualities of the metallic sand, after an experience of eight years. Specimens were laid on the table: 1st, brickwork of a fresh-water tank, which had been erected six years, was removed by a pick-axe; the bricks yielding to the strokes of the axe, but the cement remaining solid; 2nd, imitations of marble executed by a painter on the face of stuccoed-work, formed of metallic cement, in conunction with common chalk, lime, and putty, and afterwards polished; 3rd, a specimen of fresco-painting, also executed on a face similar to the above; 4th, a vase, the figures on which retain their original sharpness, although it has been exposed to the atmosphere for many years.—Mr. Chanter explained his moveable fire bars, the object of which is, to prevent the accumulation of clinker, and to keep the air channels open. This has been noticed before in this journal.

MEETINGS FOR THE ENSUING WEEK.

Mon. British Architects, 8, P.M.
— Entomological Society, 8.
— Chemical Society, 8.
Tues. Linnean Society, 8.
— Horticultural Society, 2.
Wed. Society of Arts, 3.—General Meeting.—Mr. Rotch, V.P. will describe 'Ellis's Improved Turn Table and Weigh Bridge for Railways.'
Thur. Zoological Society, 3.—General Business.
— Royal Academy.—Anatomical Lecture.
— Royal Society, half-past 8.
— Society of Antiquaries, 8.
Fri. Astronomical Society, 8.

FINE ARTS.

DECORATION.

House-Painting.

The British School of Painting is already distinguished as a school of colour, and we islanders are said to delight in full toned and positive colouring: a proposition we are not disposed to controvert, though it is rather puzzling to find satisfactory evidence of it at the present time. We do not see our public buildings, our churches, our places of assemblage for lay purposes, our private dwellings, our dress, or our furniture, generally animated with the fascinations of colours. Truth surely would compel us to admit, in spite of growing exceptions which might be quoted to the contrary, that we have little else but frigid white-washings and sombre neutral tintings in our buildings, and show little knowledge and appreciation of colour in the more mechanical productions of art. Yet in none of Nature's domains is she more bountiful in specimens of colour and its endless varieties, than in our country. During the revolution of a year, we are treated with blue skies rivalling those of Italy —(not frequently, perhaps, yet we *do* have them) and red fiery sunsets, not inferior in depth and intensity to those of Libya, and between these extremes, arising from the modification of light, we may collect every variety of cold colouring on the one hand, and warm on the other. The colouring of our vegetation too, is, of infinite diversity; and where is the clime that shows such delicate varieties in the colouring of complexions and eyes? Yet somehow, if we view the use and employment of colours at the present time, we cannot be said to be following up in our own works, the bountiful gifts and suggestions of Nature. Time was when we seemed in our practice more sensible of the influences of colour. The old Papistical Chapter of the metropolitan cathedral painted the walls of Old St. Paul's; whilst the new Protestant Chapter actually refused to receive paintings as a gift. Such remnants of Middle Age furniture as are preserved to us, indicate a much more extensive employment of bright colouring, than the furniture of our own time. Perhaps no very early specimens of the use of colouring in the interior of our domestic dwellings, can now be produced, yet as we know well, that the *outsides* of houses were hung on high days with brilliant tinted tapestry, we are surely justified in inferring, that the insides of houses had other tints than neutral ones. Even so near our times as the Commonwealth, our dress was far more coloured than it is now. It might be proved, that before the Reformation, English people delighted in strong and bright colours, and perhaps the temporary suppression of the taste (a suppression but temporary, though its duration has been so long) might be shown to have been owing to that event: we will not, however, discuss the point here. From some cause, it is certain, that we have ceased, for a long period, to use colours as much as we formerly did, and we may welcome that general revival in the employment of them which is assuredly taking place, and which first began to show itself markedly in pictures. It is, therefore, little matter for surprise, if we find in so subordinate an application of colouring as the decoration of our dwellings, either very little positive colouring, or very little knowledge or taste displayed in the employment of so much as we do find. In a paper on the subject of painting, in the *Edinburgh Encyclopædia*, the following remarks occur on the present state of House-Painting, very apposite to what we have here advanced:—

"With us, the practice is chiefly confined to that of a mere handicraft, where little refinement is sought for, beyond the simple usage of the painter's shop, the mixing up of colours and their smooth application to the wall. Whereas, in Italy, the study and acquirements of a house-painter are little inferior to what is requisite for the higher branches of the art; and, in fact, the practice of both is not unfrequently combined. They are more conversant with the science, as well as the practice, of colouring, with the rules of harmony and with the composition of ornamental painting in all its branches; so that their works might be transferred to canvas, and admired for their excellence. In fact, the great frescoes of the first masters, which have been the admiration of ages, were but part of the general embellishment of the churches and palaces of Italy. And the most celebrated names in the list of artists, have left memorials of their fame in the humble decorations of the arabesque, in which all the exuberance and playfulness of fancy is displayed, as well as the most enchanting harmony of brilliant colours. It is in this essential point of harmony, that our practice is particularly defective; we rarely see, in the simple painting of our apartments, any combination of colours that is not in some part offensive against even the common rules of art; if there are any rules observed, save those of mere caprice or chance—although there are certain combinations pointed out by the laws of optics, which can as little be made to harmonize as two discordant notes in music. The unpleasant effects arising from such erroneous mixtures and juxta-positions, we are often sufficiently aware of, without having the skill requisite to assign the reason any more than the painter who chose them. This accounts for the prevalent use of neutral colours in our ornamental painting, which is less liable to offend by whatever bright colour it may be relieved, and likewise the safer and more agreeable combination of the different shades of the same indefinite colour. But no sooner do our painters attempt any combination of decided colours than they fail. The ornamental painting, in Italy, is almost entirely in decided colours of the most brilliant hue, and yet always inexpressibly pleasing in the combinations, because the rules of harmony are known and attended to. Neither is this proficiency confined to the decoration of palaces, or the more elaborate and expensive works; we have seen in dwellings of a much humbler cast, and indeed in general practice, the most graceful designs of ornament painted, not in the simple manner of Camayeu, but displaying every possible tint of bold and vivid colouring, and melting into each other with all the skill and harmony of a piece of brilliant music."

For our parts, we are disposed to believe harmonious colouring, consistently employed in the decoration of all buildings—inhabited buildings especially, where we spend a great part of our lives—not to be either slight or unimportant in its influence on the moral tone of the inhabitants. As we may read to some extent the character of individuals in their dress, so we believe we might do so, in the character of their dwellings. Hence, a very dull-minded, tasteless people we may be pronounced to have been during the eighteenth century. A room of bright and cheerful appearance surely tends to dispel gloomy and melancholy associations, whilst a dark and dismal cell provokes them. Glitter and tawdriness disturb thoughtfulness, whilst quietude in colouring tends to suggest it.

"Experience," says Goethe, "teaches us that particular colours excite particular states of feeling." It is related of a witty Frenchman, "Il pretendoit que son ton de conversation avec Madame étoit changé depuis qu'elle avoit changé en cramoisi le meuble de son cabinet qui étoit bleu."

The great majority of domestic apartments at the present time, even in houses of the first class, have scarcely any marked features of decoration about them which indicate taste or knowledge. They present a monotonous sameness and deficiency of any principles of taste,—the varieties of character which occur, from time to time, being regulated only by the caprices of fashion. Sometimes every room you enter is of one colour. In one of the most splendid of modern houses in the metropolis—we mean in Sutherland House—we have been especially struck with the monotony of white and profuse gilding, in the forms of the Louis Quinze period. Sometimes the rage is for warm shades of colouring, at others for cold, though the preponderating taste seems to take refuge in dull, characterless, neutral colouring. "People of refinement" (to quote Goethe again) "have a disinclination to colours. This may be owing partly to weakness of sight, partly to the uncertainty of taste, which readily takes refuge in absolute negation." During one season salmon colour, as it is called, reigns supreme; then sage colour succeeds salmon; drab follows sage or slate; and then all varieties of crimson put out the drabs. Each is employed in its turn, without the slightest reference to any of the questions which should determine its appropriateness or otherwise. It is the same with ornamental patterns. One year you find every drawing-room papered with patterns of flowers, another year scrolls will be all the rage. One year small patterns are correct—in the following large only can be tolerated; and whilst each fashion reigned, each was exclusively used. Crimson walls in south aspects, leaden coloured ones in north aspects. Small patterns applied to rooms large and small, and large patterns to rooms small and large. A like absence of any recognized principles is seen in the carpets and hangings. When crimson walls were oftenest seen, then was the call for drab and light-coloured carpets. More by luck, than anything else, it is now the fashion to have the carpets darker in colour than the walls. We may often enter a room which, preserving something of each shifting fashion of the few past years, exhibits a violation of every principle of harmonious decoration. Walls of a hot and positive colour in a room with a southern aspect—blue ceilings fuller of colour than the drab carpets, with curtains and hangings of scarlet—and perchance a huge sofa covered with black horse-hair. Not a single thing appropriate or consistent, but the whole a medley of unsuitableness.

Having watched this subject, with interest, for years, we have arrived at some conclusions which, we think, it may possibly be useful to submit to our readers, and we shall endeavour to do so, in such a shape, that they may be turned, perhaps, to some practical account. It appears to us, that certain principles of decoration may be laid down, which, if recognized and applied, would make our dwellings much more cheerful and comfortable; which might make them comparatively beautiful, not only without any additional cost, but would make the keep of them more economical, by rendering them, to a great degree, independent of the caprices of fashion. It is the absence of correct principles which causes decoration and furniture to be out of fashion—tiresome—palling to the eye, and subject to constant change,—whereas, what is really beautiful, being based on everlasting principles, is subject to no change. We think the greater part of the painting of a house might be a work to last for a life, with benefit even to journeymen painters, and infinite satisfaction to the house inhabitant. A truly melancholy suspension of comfort is the work of painting a house. Your whole little world so turned upside down, that it hardly rights itself before the work has to be done again. What a comfort it would be to undergo the penance only once in a life, instead of every seven years.

It seems to us quite a mistake—though a very common and popular one—to imagine that Beauty is necessarily costly in its production. Nothing could be cheaper in material or manufacture, than the earthenware pots of the ancient Etruscans, yet they have perfect and everlasting beauty in their forms. The preference of one colour to another, within a very wide range of colours, is not at all a thing of greater or lesser cost. So far from beauty being costly, it would more often happen that in a given number of existing specimens of decoration, the greater beauty and harmony would be obtained at a smaller cost of labour and material, than what are expended to produce ugliness and confusion. Take, at random, a dozen patterns of paper hangings of various colours and devices, and in the majority of them, we believe it could be shown, that their cost of production might be materially lessened, whilst their beauty should be greatly enhanced.

Before we proceed further in the discussion of any practical rules for colouring interiors of houses, we must find room to quote, from Mr. Hay's work on Decorative Painting, some of his statements of the principal defects which he has observed in internal decorations. A conviction that our practice is not what it ought to be, and a humble recognition that there may exist rules for our guidance, though we may not be cognizant of them, are the first steps in

Digitized by Google

amendment. The popularity of Mr. Hay's excellent work renders any further commendation on our part superfluous, and its arrival at a fourth edition affords a good sign of increasing attention to the subject. We wish it had been somewhat more specific and practical in its details for general use. It is essentially a work of principles. Mr. Hay considers the first and most obvious defect to be when there is no particular tone or key fixed on for the colouring of an apartment; "that is, when one part of the furniture is chosen without any reference to the rest, and the painting done without any reference to the furniture. This generally produces an incongruous mixture." The reader will understand what is meant by "tone or key" by what follows:—

The "tone or key is generally fixed by the choice of the furniture; for as the furniture of a room may be considered in regard to colouring in the same light as the principal figures in a picture, the general tone must depend upon the *colours* of which it is composed: for instance, if the prevailing colour be blue, grey, cool green, or lilac, the general *tone* must be *cool*; but if, on the other hand, it is red, orange, brown, yellow, or a warm tint of green, the tone must be warm." We may give an example of the principles here insisted on. The important masses of colour, independent of those on walls in most rooms, are furnished by the carpet, the covering of the sofa, chairs, &c., the draperies of the curtains, and the covering of the tables. The colours of all these are too frequently chosen without any reference one to the other. If the colour of the furniture be light *blue*, then it would be bad taste to colour the walls *crimson*, or select a carpet with any amber colour or much warm brown colour in it. There is a very apt illustration of this in a small drawing-room in the Reform Club, which we have noticed for another purpose below. So with the objects *vice versâ*. The blue furniture might fitly be surrounded with any colour in which its own colour predominated, or even with a lemon colour—full toned or light in degree according to the tone of the *key* (*i. e.* the *blue*) colour. Mr. Hay's advice is perfectly sound in this case; and, as a case often occurs, where the decoration has to be adapted to furniture already existing, it is wise to lay down the proper principle for its mode of treatment. But it must not hence be inferred that furniture of any colour may be chosen at random, and then the decorative colouring of the apartment suited to it. In cases where both the furniture and decoration are to be newly provided, where the whole department of decoration is to begin *ab initio*, then the choice of colours for all objects should be determined upon principles mutually applicable to all. In such cases (of which we shall have to speak hereafter), the tone of the general colouring should be fixed with reference to much broader principles than any one dependent merely on the accidental colouring of the furniture.

"A second and more common fault," proceeds Mr. Hay, "is the predominance of some bright and intense colour either upon the walls or floor. It is evident that the predominance of a bright and overpowering colour upon so large a space as the floor or wall of a room, must injure the effect of the finest furniture." Very often indeed do we meet with illustrations of this fault. Look over half the paperhangings in London, and it is most palpable in them. Nothing more common than to find a paper with a cool leaden-coloured ground or surface covered over with staring bright yellow scrolls. It is a defect no less prevalent in carpets, which are everywhere to be seen strewn with flower-patterns, Louis Quatorze scrolls, and affected imitations of forms manifested in intense brightness. "A third error is introducing deep and pale colours, which may have been well enough chosen in regard to their hues, but whose particular degrees of strength or tint have not been attended to. Thus the intensity of one or more may so affect those which they were intended to balance and relieve, as to give them a faded and unfinished appearance. This may proceed from applying the fundamental laws without any regard to the minutiæ; for although it is always necessary to subdue and neutralize such colours as are introduced in large quantities, yet when they are reduced by dilution alone the effect cannot be good. This error is also very common in the colouring of carpets and paperhangings. In such productions the degree of intensity of the individual colours is seldom taken into account. A pale tint of blue is often introduced as an equivalent to the richest orange colour, and sometimes a small portion of lilac—one of the lightest tints of purple—as a balancing colour to a quantity of the most intense yellow. This is inverting the natural order of colours altogether. Every one may understand by this, that if it is desired to contrast effectively one colour with another,—say a crimson with green—if one is deep toned or dark, so should be the other."

Having thus briefly stated what appear to be the most obvious defects of the present modes of coloured decoration in our domestic residences, we shall submit some hints for the consideration of any of our readers who may contemplate employing the House Painter and Decorator. We must however premise, that in treating a subject like the present, the absence of positive and practical illustration places us under much disadvantage. To illustrate fully the force of our observations, this paper should be read hand in hand with specimens of colours. The house-painter, states Mr. Hay, "must take into consideration not only the style of architecture, the situation, whether in town or country, but the very rays by which each apartment is lighted, whether they proceed directly from the sun or are merely reflected from the northern sky." Without undervaluing the importance of attending to the architecture and situation, it appears to us that Mr. Hay places that consideration which has the greatest weight last in order—namely that which depends on the aspect of the room to be coloured. To us it appears, after bearing in mind the nature and characteristics of the climate, that the first question to be asked before commencing any work of internal decoration is, What is the

Aspect

of the room to be decorated? In considering *Climate*, Nature herself seems to offer us abundant analogies for our guidance. In countries where light is least abundant, there the objects of nature have the least dark colouring. Near the North Pole, where the darkness of night is almost perpetual, Nature clothes the ground and animals in snowy whiteness. In the regions of the Tropics, where the light is strongest, the deepest colours, approaching to black, are most frequent. In countries advanced in art, where the light is abundant and powerful, we find the greatest employment made of deep-toned colouring. The ancients, in brightly lighted countries, as at Pompeii, were accustomed to paint large surfaces of their interior habitations positive blacks. In those cases where we find such examples, the rooms were entirely open above to the heavens, and the supply of light was altogether uninterrupted. In a climate like that of any part of Great Britain, we should never dream of covering large surfaces with black or even with very dark blue, or purple, and scarcely with very deep crimson, unless under peculiar circumstances. During three-fifths of the year, the light in our country is subject to constant obscuration. We therefore say, as a general rule, let the colouring be light. We do not mean to exclude the judicious use of any positive strong colours, or even of black itself, which may be employed most successfully in details, but we contend that the first general impression of rooms in England should be light rather than dark. As our climate also inclines rather to cold than warmth throughout the year, the general rule should be to have *warm* colouring in preference to *cold*, though our present practice tends more in a contrary direction.

It may not, perhaps, be unnecessary to put in an untechnical form, a meaning of the terms *warm* and *cold* colouring, which may be at once understood. Some colours are called primary, some secondary, some tertiary. Every reader, we assume, knows a blue from a red, red from green, yellow from purple, and the most obvious and common distinctions of colouring. Without entering into any theory on the subject, we say that blue, red, and yellow are *primitive* colours—that is, that they are self-created colours, because the compounding together of no other colours will produce them. Green, orange, and purple are secondary colours, and result from the admixture of the three primitive colours. The tertiary mixtures, such as olive, brown, slate, are formed by the union of the secondary colours themselves, or the colours which make them, in the same proportions. The two colours which represent the extremes of heat and cold are *red* and *blue*. Yellow stands midway between them, and by itself is neither positively warm nor cold, though it rather more inclines to warmth than coldness, as we see illustrated in the green colours. As greens contain blue, they are cold looking, as yellow warm. Mixed colours, in proportion as they contain red, incline to warmth—as they contain blue, to coldness. It is true, we may have the effects of both warmth and coldness, and strong effects too, without using any positive colour at all; but this requires a peculiar treatment. We purposely avoid entering upon the effects which an artistic knowledge of contrasts may realize. We are writing rather for those who are ignorant of refinements, and our object is to deal with the most general principles rather than any exception of them. Our first canon, therefore, for all general purposes in internal decoration in this country is, that the general colouring be both light and warm; leaden and cold neutral tints should be altogether eschewed, if our aim be to banish gloom and chilliness from our houses, and to have cheerfulness and warmth instead. We are far less liable to error by leaning to warm rather than to cold colouring.

We have now to show what are the circumstances modifying the application of this general rule. The first and most important considerations, as we have already said, are those arising out of ASPECT. Bearing in mind the general necessity for the employment rather of warm and light colours than of cold and dark ones, the circumstances of the aspect of the room to be decorated should regulate the inclination to the use of one or the other. You are going to decorate your drawing-room or dining-room both with furniture and colouring. Before you speak to your upholsterer or house painter, have a perfect understanding and recognition of what is the *aspect* of the room. Let no circumstances make you regardless of this fundamental consideration. No cost will remedy the forgetfulness. Spend what you will, you will always repent having a cold colour in a room lighted from the north, or a very hot colour in a room lighted from the south. If the aspect be north, north-east, north-west, or due east, the general tone of colouring should be positively warm. Blues, greens, and all shaded colours which involve any predominant use of blue, must be avoided. There is a drawing-room in the Reform Club, looking north, which may convince any one of the mistake of forgetting aspect. The walls and curtains are blue; with all its elegance—and its ceiling and cornice are beautiful—the effect of this room by daylight is always chilly. It would be just the reverse if it looked upon Carlton Gardens. There is also a room in Windsor Castle, looking on the North Terrace, called Queen Adelaide's room, which is decorated with blue and silver—a most frigid looking room even in the midst of summer. In such aspects the choice should tend towards reds, and all their various combinations with yellow. As the aspect approaches east and west, so the colours should verge towards yellow rather than red tints. In an eastern aspect, tints of light yellows, lemon colours, &c. are always effective and cheerful. If the aspect of the room be south, south-west, and west, and open to the direct rays of the sun, then we may venture on the use of cooler colours—even on positive blue, should our taste lead us in that direction.

We have scarcely passed the threshold of our subject, but are warned that our limits are exhausted. We must therefore postpone other observations, on many details of the subject, to another occasion.

MUSIC AND THE DRAMA

DRURY LANE.—We are spared the necessity of detailing the plot of Mr. Bunn's 'Bohemian Girl,'—set by Mr. Balfe, and now running its career of nightly success—since the opera is based on the ballet of 'The Gipsy,' the second act of which will never be forgotten by those who have seen Fanny Elssler's brilliant pantomime, accompanied by Weber's *Preciosa* music. We are inclined to think that a too great desire for English popularity has somewhat impaired the value of the opera, since it hardly reaches the solidity of one of the modern musical dramas given at the Parisian

Digitized by Google

Opéra Comique; and thence, we fear, it may not prove sufficiently weighty to keep possession of a large stage, and to bear, without being borne down, spectacle so gorgeous as has been lavished on it. Briefly, we do not find the work so good of its kind as 'Geraldine,' or 'Keolanthe.' It contains taking ballads for Miss Rainforth, Mr. Harrison, and Mr. Borrani, by which each singer gets an *encore*, and has deservedly advanced with the public. There is a very pretty gipsy chorus, the leading phrase of which, according to the modern plan, forms the thread, as it were, on which most of the scenes are strung; but the musical pieces of greater pretension are too fragmentary; and more than one situation (witness *Arline's* examination before the *Count*) is *said*, which ought to have been *sung*. Further to illustrate our meaning—the best thing in the opera is the introductory chorus and dialogue to the second act; while the splendours of the Presburg fair become unmeaning, owing to the tenuity of musical interest. But—not to quarrel with pippins because they are not pine-apples—Mr. Balfe has opened his better vein of melody, treated us to some piquant instrumentation, and finished his task more carefully than he used to do: and the opera will and ought to attract for a time. In addition to the artists we have praised, we must commend Mr. Stretton, who always acts, and this time enters thoroughly into his part. The orchestra is mellow; and the chorus (our Billingtons would not believe such doings, could they revisit their old haunts!) positively accomplishes *pianissimo*, and *sforzando*, and *crescendo* effects. The dresses are superb, and the scenery picturesque and appropriate.

Haymarket.—Another French vaudeville has been served up *à l'Anglaise*, without the "couplets," as a first course in the evening's entertainment at this theatre. The *originality* of the plot is beyond question; the French *vaudeville* having been suggested by one of M. A. de Musset's dramatized magazine-tales, the invention of which was derived from Massinger's 'Picture,' which play was probably founded on a Spanish story. 'Caught in a Trap' is ushered in by a lively chorus of peasants, that gives promise of a subsequent musical treat, which is not fulfilled; but this is accounted for by the circumstance of Mrs. Nisbett and Mr. Webster filling the parts originally intended for Madame Vestris and Mr. C. Mathews, whose protracted absence from the theatre—occasioned by pecuniary embarrassments—obliged the manager to find substitutes for those clever performers. A more attractive bait than Mrs. Nisbett could not be desired; her laugh is music of a mirthful kind; and though Mr. Webster, who is "caught in the trap," does not solace his captivity with a song, Buckstone, his fellow-prisoner, is a sort of "musical mouse," and has a ravenous appetite for cheese. Mrs. Nisbett first appears in the guise of a peasant boy, her merry face almost hidden in a bush of red hair, and then as a countess, in satin and feathers; showing, in both costumes, the arch joyousness which is the charm of her acting—to which, let us add by way of hint, she too often sacrifices traits of character. How she dupes the gallant soldier who has taken her husband prisoner, and turns the tables on him when he seeks to entrap her, let the piece itself tell; for in this consists its amusement. The doleful dumps of two hungry captives, compelled to spin flax and work at a tambour frame for their suppers, by two such pretty taskmistresses as Mrs. Nisbett and Miss Julia Bennett, is enough to put any audience in good humour, especially when Buckstone is in the case.

Mr. and Mrs. Keeley are playing at the Princess's, but they have not yet appeared in any piece worthy of their talents.

MISCELLANEA

Paris Academy of Sciences.—Nov. 13.—A paper was read from M. de Ruolz, in which he proposes to substitute, for general purposes, the oxide of antimony for white lead, and thus prevent the painful diseases to which those who use and who prepare white lead are subject. Among its other advantages, he says that it is as pure in colour as the most beautiful silver white; it forms with oil an unctuous and cohesive mixture, and as a coating to wood or any other article is superior to white lead; when dry it preserves its brilliancy, and, mixed with other colours, produces a much better effect than white lead; it is also two-thirds cheaper. M. de Ruolz states, that in the preparation of the flower of antimony, there is no danger to the operator, and that in using it as a paint none of those emanations take place which make white lead so dangerous.—A paper entitled 'Remarks on the so-called Pigmy Race of the Valley of the Mississippi' was received from S. G. Morton, M.D., Dr. Frost, of Nashville, having obtained a skeleton of one of these people, exhumed from a cemetery near the Cumberland Mountains, in White Country, Tenessee. These coffins (observes McCall) are from 18 to 24 inches in length, by 18 inches deep and 15 wide. These are made of six pieces of undressed sandstone or limestone, in which the bodies are placed, with their shoulders and head elevated against the eastern end, and their knees raised towards the face, so as to put the corpse in a reclined or sitting position. The right arm resting on an earthen pot of about two pints in capacity, without legs, but with lateral projections for lifting them. With these pots, in some graves, are found basins and trays, also of pipeclay and comminuted shells mixed; and no one of these repositories is without cooking utensils. In one of the graves was found a complete skull, and an os femoris, but most of the other bones were broken in hastily removing them. This is said to be the largest skeleton ever found at any of these burying-grounds. It has the cranium very flat and broad, and very projecting front teeth, and appears to have pertained to an individual not over 12 or 14 years of age. These remains are to me, says Mr. Morton, an additional and convincing proof that the so-called pigmies of the Western countries were merely children, who, for reasons not readily explained, but which actuate some religious communities of our own time, were buried apart from the adult people of their own tribe.—*Nov.* 20.—A communication, in connexion with that made by M. de Ruolz, relative to the substitution of flower of antimony for white lead as paint, was made by M. Rousseau. For some time past this gentleman has been endeavouring to extract the sulphur from pyrites, and, having succeeded in his experiments, he stated the result. His mode of operating is simple, being an imitation of the natural reaction by which oxygen is fixed on oxidable substances, by the influence of steam. It suffices to pass over sulphurets of iron, lead, copper, and antimony, a double stream of air and steam, for the pyritous mass to be reduced entirely to a sulphurous acid and a metallic oxide, in the form of an impalpable powder. Thus, the unproductive mines of antimony in France may be turned to immediate account, as this oxide is, without further preparation, in a fit state for mixing with oil, to be used as paint. All that remains to be ascertained is, that this substitute for white lead may be used with safety.—Several chemical papers were read, but none of a nature to interest the public.—M. Arago presented a model of the new flood-gates invented by M. Fourneyron, and which it is proposed, as already stated, to place under the arches of the Pont Neuf.

Metropolitan Improvements.—Destruction is doing its work energetically. The clump of buildings about the middle of Broad Street, St. Giles's will soon be completely removed. At this point the new street from Waterloo Bridge will form the angle, and enter the new line from Oxford Street to Holborn. One half the houses are gone which obstructed the proposed street from Piccadilly to Long Acre. An act of parliament is to be applied for to widen the carriage road on the south side of Piccadilly, between Bolton Street and Park Lane, taking in so much of the Green Park as will make that portion of Piccadilly of a uniform width of seventy feet, or thereabouts. At the same time the government intend to apply for powers to commence the proposed Thames Embankment. On this subject Lord Lincoln has written the following letter to the Lord Mayor:—

1, Whitehall Place, Nov. 8, 1843.

My Lord,—As chairman of the commissioners appointed by Her Majesty for "inquiring into and considering the most effectual means of improving the metropolis, and providing increased facilities of communication within the same," I have the honour to transmit herewith, for your Lordship's information, a plan of the proposed embankment between Westminster and Blackfriars Bridges, for the construction of which it is the intention of Her Majesty's Government to submit a bill to Parliament in the course of the ensuing session. It will afford me—as it will, I am sure, afford the commissioners—great pleasure to find that the result of these inquiries into the expediency of the course proposed will be acceptable to the corporation, directed as those inquiries have been to the interests both of the navigation of the river and of the trade carried on upon its shores, and ultimately to the accomplishment, without prejudice to those interests, of a great metropolitan improvement.

I have the honour, &c., Lincoln.

Rev. Sydney Smith.—(Abridged from *The Times*). In this journal there appeared about two months ago an announcement of the death of the Rev. James Tate, Canon Residentiary of St. Paul's, and vicar of Edmonton, with some account of that eminent scholar, consistent politician, and, above all, most excellent Christian. By Mr. Tate's death his family was almost suddenly deprived of the whole of that competence they had enjoyed but a short time, and which, after almost half a century of straitened circumstances, seemed necessary for their support in that station of society to which they belonged. By the death of Mr. Canon Tate the living of Edmonton fell to the disposal of Mr. S. Smith. We observe by the Clergy List that this gentleman possesses no other benefice but a small Chancery living in Somersetshire, under 300*l.* a year. Edmonton is upwards of 1,500*l.* He might have appropriated it to himself. Frankly, and without solicitation, he, within a very few days of the death of his friend the father, bestowed the living on the excellent son, Mr. Thomas Tate. It was an unexpected solace to the afflicted—a home to the family—a fortune to those who had sustained a severe deprivation; and the sacred duties of the living will, we have no doubt, be exemplarily performed by the present happy and grateful incumbent.

Hurricane.—The following extract is from a letter received by Mr. E. Turner, M.P. for Truro, from his son, H. M. Consul at Carthagena, dated October 23rd:—"On the morning of the 21st, a most awful catastrophe occurred here, in sight of my house. About 4 o'clock in the morning vivid lightning came on, with tremendous thunder—such lightning as was never seen at Carthagena within the memory of man. I left my bed, and proceeded to the window, where I had not been five minutes before I heard a great rushing of wind proceeding from the east, and I observed also a water-spout, which immediately burst, carrying with it into the air five large felucca boats, of forty to fifty tons each, which fell into the water again, upside down, and of course sank, with the poor sailors on board, fifteen of whom were drowned. It then proceeded in a north-west direction, unroofing houses, carrying off timber trees, and even rocks of great weight. This morning, two poor fellows, sailors, who belonged to one of the vessels, were found dead about a league from Carthagena, having been carried off and dropped by the whirlwind. On the mole were thrown huge stones, houses were demolished, and the roof of the Prisichi, where the convicts are confined, was completely carried away. Strange, however, as it may seem, an English brig was at anchor within 50 yards of the spot where the water-spout burst, and sustained no damage whatever."

To Correspondents.—J. W. G.—A letter and newspaper from Belfast—J. G.—received.

We are obliged to "A Reader," but the name was so spelt in the Paris papers, and we cannot alter it on the report of an anonymous correspondent.—We have received another able letter from Mr. Borron, but the discussions which it involves are suited rather to a purely scientific journal, and we cannot further enter on the subject. His letter is left for him at our office in Wellington Street.

BOOKS FOR PRESENTS, DRAWING-ROOM TABLE, &c.

Just published, price 31*s.* morocco,

SHAKSPEARE GALLERY: containing Forty-five Plates of the principal Heroines in Shakspeare's Plays, engraved by Mr. CHARLES HEATH, from Drawings by the first Artists. Beautifully bound in morocco.—An Edition may also be had, with Plates highly coloured, 3*l.* 3*s.*

Also, price 31*s.* 6*d.* plain; 3*l.* coloured,

HEATH'S WAVERLEY GALLERY: Thirty-six Plates, beautifully engraved, with Descriptive Extracts.

Also, same size and price,

GALLERY of BYRON BEAUTIES: Thirty-nine Plates, engraved by the FINDENS, from Drawings by eminent Artists.

D. Bogue (late Tilt & Bogue), Fleet-street.

LE KEUX'S CAMBRIDGE.

Just completed, in 2 vols. with 132 Engravings by J. Le Keux,

HISTORICAL and DESCRIPTIVE ACCOUNTS of all the COLLEGES, PUBLIC BUILDINGS, and TOWN of CAMBRIDGE. By THOMAS WRIGHT, M.A. F.S.A., of Trinity College, Cambridge. Price 2*l.* 2*s.* 8vo.; and 4*l.* 4*s.* 4to.

"On the first appearance of this handsome work we expressed our opinion of its embellishments. The plates fully sustain the reputation of Mr. Le Keux, and Mr. Wright has evidently made considerable researches in sources which have not hitherto been explored."—*Literary Gazette.*

3. The Travellers of Europe, on the same plan; with Views of all the Capitals of Europe. 7s. 6d.

Mr. Spooner has a great variety of Games and Dissected Puzzles of recent publication.

Just published,

PROPORTION, or the GEOMETRIC PRINCIPLE of BEAUTY ANALYSED. By D. R. HAY, Decorative Painter to the Queen, Edinburgh. In royal 4to. with 17 Plates and 38 Woodcuts, price 25s.

Lately published, by the same Author,

I.

The Natural Principles and Analogy of the Harmony of Form. In royal 4to. with 18 Engravings and Woodcuts. Price 15s.

II.

The Laws of Harmonious Colouring adapted to Interior Decorations. The 4th edition, with 8 coloured Diagrams, 8vo. Price 7s.

"In so far as we know, Mr. Hay is the first and only modern Artist who has entered upon the study of these subjects without the trammels of prejudice and authority. Setting aside the ordinances of fashion, as well as the dicta of speculation, he has sought the foundation of his profession in the properties of light, and in the laws of visual sensation, by which these properties are recognized and modified. The truths to which he has appealed are fundamental and irrefragable; and the conclusions which he has deduced from them will admit of no modification either from taste or fashion. Notwithstanding some trivial points of difference between Mr. Hay's views and our own, we have derived the greatest pleasure from the perusal of these works. They are all composed with accuracy and even elegance. His opinions and views are distinctly brought before the reader, and stated with that modesty which characterizes genius, and that firmness which indicates truth."—*Edinburgh Review*, October, 1843.

William Blackwood & Sons, Edinburgh, and 22, Pall Mall, London.

ENGINEERING SCHOOL CLASS-BOOKS.

In cr. 8vo. 4s. 6d. bd. with 220 Diagrams engraved for the work,

CRUVEILHIER'S ANATOMY. Translated by Dr. Madden, and Revised by Professor Sharpey, of University College. In 2 vols. containing 1,232 closely-printed pages, and upwards of 300 Illustrations, with a copious Index, &c. Post 8vo. price 18s. per volume, cloth lettered.
"Having derived much pleasure from 'Cruveilhier's Descriptive Anatomy,' as lately published in an English translation with numerous illustrations, I recommend it thoroughly to your notice. The arrangement and general views are scientific and clear, the language perspicuous. The descriptive details are full, accurate, and satisfactory, without being prolix or tedious. It exhibits the science in its present advanced state; and is by far the best work that I know of in our language, as a guide to the students, and a work of reference for the practitioner."—*Mr. Lawrence, in his Surgical Lectures.*
Whittaker & Co. Ave Maria-lane.

CATLIN'S TRAVELS IN NORTH AMERICA.

THE VICTORIA ANNUAL for 1844; consisting of a series of Eighteen Emblematical Designs, printed in Colours and Gold, drawn in the Missal Style of the Fifteenth Century, by JUSTIN LOEVEN. On each page will be printed an Acrostic Poem, by 'LARA.'
London: Longman, Brown, Green & Longmans.

BARKER'S L'EMPRIERE—COMPLETE EDITION,
With Author's improvements. 8vo. price 16s. 6d. bound.
L'EMPRIERE'S CLASSICAL DICTIONARY, containing a copious Account of Persons, Places, and Remarkable Works of Art, &c., mentioned in Ancient Authors, with Appendixes, &c.
*** This work has undergone revision from time to time, and the greatest additions made by Professor Anthon have been introduced. Assistance from other eminent scholars was also obtained by Mr. Barker, and subsequent editors, and a vast quantity of matter thus collected. It is now the fullest Dictionary on the subject (containing upwards of 1100 octavo pages, double columns), and as works of reference cannot be too comprehensive, it is hoped it will be distinguished from the old meagre editions and abridgements, which, though little less in price, do not contain a third of the information.
London: Whittaker & Co.; Simpkin, Marshall & Co.; H. Washbourne. Eton: E. P. Williams. Rugby: Combe & Crossley.

DARLEY'S SCIENTIFIC LIBRARY, for the Use of Schools, Private Students, Artists, and Mechanics.
It is the purpose of this Work to furnish a Series of Elementary Treatises on Mathematical Science, adapted to the wants of the public at large. To youth of either sex at public and private schools; to persons whose education has been neglected, or whose attention has not been directed in early life to such studies; and to Artists and Mechanics, these little works will be found particularly suited. The principles of the various Sciences are rendered as familiar and brought as near to our commonest ideas as possible; the demonstrations of propositions are made plain for the mind, and brief for the memory; and the Elements of each Science are reduced not only to their simplest but to their shortest form.
1. A System of Popular Geometry. Containing in a few Lessons so much of the Elements of Euclid as is necessary and sufficient for a right understanding of every Art and Science in its leading Truths and general Principles. By George Darley, A.B. Fourth Edition. 4s. 6d. cloth.
2. Companion to the Popular Geometry. In which the Elements of Abstract Science are familiarised, illustrated, and rendered practically useful to the various purposes of Life, with numerous Cuts. Second Edition. 4s. 6d. cloth.
3. A System of Popular Algebra, with a Section on Proportions and Progressions. Third Edition. 4s. 6d. cloth.
4. A System of Popular Trigonometry, both Plane and Spherical; with Popular Treatises on Logarithms, and the Application of Algebra to Geometry. Second Edition. 3s. 6d. cloth.
"For students who only seek this limited knowledge of these sciences, there are perhaps no treatises which can be read with more advantage than Darley's Popular Geometry and Algebra."—*Library of Useful Knowledge, Article 'Mechanics.'*

EUROPEAN LIFE INSURANCE COMPANY, No. 10, Chatham-place, Blackfriars, London. Established January, 1819.

President—Sir James Rivett Carnac, Bart. Rook Cliff, Lymington.
Vice-President—Geo. Forbes, Esq. 9, Park-square, Regent's-park.

With Twelve Directors.

FACILITIES are offered by this long-established Society to suit the views and the means of every class of insurers. Premiums are received yearly, half-yearly, or quarterly, or upon an increasing or decreasing scale. Or one-half only of the usual rate, with interest on the remainder, will be received for five or seven years, the other half to be paid at the convenience of the assured.

The insured for life participate septennially in the profits realized.

A liberal commission is allowed to Solicitors and Agents.

DAVID FOGGO, Secretary.

N.B. Agents are wanted in towns where none have been yet appointed.

WESTERN LIFE ASSURANCE SOCIETY, 49, Parliament-street, Westminster.—Capital 500,000*l.*

Directors.

Henry Edgeworth Bicknell, Esq.	James Hunt, Esq.
William Cabel, Esq.	John Arscott Lethbridge, Esq.
Thos. Somers Cocks, jun. Esq.	Edmund Lucas, Esq.
George Henry Drew, Esq.	George Kennet Pollock, Esq.
William Evans, Esq.	James Lys Seager, Esq.
William Freeman, Esq.	John Bagley White, Esq.
Francis Fuller, Esq.	Joseph Carter Wood, Esq.
Joseph Henry Goodhart, Esq.	

Physician—William Richard Basham, M.D.
Surgeons—Alfred Leggatt, Esq.; George D. Pollock, Esq.
Bankers—Messrs. Cocks, Biddulph & Co.
Solicitors—Messrs. J. L. Bicknell and J. C. Lethbridge.

The leading features of this Society are—

The very moderate Rate of Premium when viewed as combined with *perfect security* to the assured.

The advantage to the Assurers (by Table 2) of becoming entitled to *three-fourths* of the *profits*.

The assurance of a *certain bonus*.

The facility for *securing debts*.

The allowance of *half* the Annual Premium to remain unpaid for *seven years*, and

The accommodation of *temporary loans* to the Assured on available security. Immediate and deferred Annuities are granted by this Society on terms advantageous to the Public.

A liberal Commission allowed to Professional Gentlemen and Agents introducing business to the Office.

EDWARD T. RICHARDSON, Secretary.

DISEASED AND HEALTHY LIVES ASSURED.

MEDICAL, INVALID, and GENERAL LIFE OFFICE, 25, Pall Mall, London. Capital 500,000*l.* This Office is provided with very accurately constructed Tables, by which it can Assure Diseased Lives on Equitable Terms. Increased Annuities granted on *unsound* Lives, the amount varying with the particular disease. Members of Consumptive Families assured at Equitable Rates. Loans granted upon personal security.

F. G. P. NEISON, Actuary.

NORTH BRITISH INSURANCE COMPANY, 4, New Bank-buildings, and 10, Pall Mall East: instituted in 1809. Incorporated by Royal Charter.

His Grace the Duke of Sutherland, *President*.
Sir Peter Laurie, Alderman, *Chairman of the London Board*.
Francis Warden, Esq. (Director H.E.I.C.) *Vice-Chairman*.
John Webster, M.D. 24, Brook-street, *Physician*.
Capital 1,000,000*l.* fully subscribed.
Annual Revenue, from Life Premiums.....£84,000
Accumulated Assurance Fund, exceeding 380,000

DIVISION OF PROFITS.

The Directors beg to remind those desirous of effecting Assurance on their lives, that all Policies opened with this Office on the participating scheme, before the 31st of December inst., will secure the full benefit of the current year's entry at the approaching septennial investigation in 1844, when, from the prosperous state of the Company's business, a considerable addition, or bonus, to the existing policies may be confidently expected.

Fire Insurances may be effected at the Company's Western Branch Office, 10, Pall Mall East, on Private Houses, Country Mansions, Furniture in the same, and Farm Steadings, at the lowest rates of premium corresponding to the risk.

Prospectuses, containing Tables of Rates, and a full List of the Directors, &c. who are all responsible *Partners*, may be obtained on application to Messrs. B. and M. Boyd, Resident Members of the Board, 4, New Bank-buildings; or to the Actuary, 10, Pall Mall East.

JOHN KING, Actuary.

ECONOMIC LIFE ASSURANCE SOCIETY, No. 34, Bridge-street, Blackfriars, London: established 1823. Empowered by Act of Parliament, 3 William IV.

Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits.

The bonus declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1839 a second bonus was declared, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.

Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.

CAMPBELL JAMES DOWNER, Sec.

PATENT ELECTRO-PLATING and GILDING.—OLD PLATED GOODS, as well as every description of METAL ARTICLES, are by this process plated or gilt, and rendered equal to new, including every necessary repair, at a comparatively trifling expense. Iron articles coated with copper and zinc.—ELKINGTON & CO. 45, Moorgate-street, City; and 22, Regent-street, corner of Jermyn-street.

WOLFF & SON'S CRETA LÆVIS, or PERMANENT DRAWING CHALK, in various Colours.

E. WOLFF & SON beg to apprise Artists and Amateurs that they have, by the introduction of great improvements in their CRETA LÆVIS, enabled it to be used the same as the ordinary pencil; and effects can now be produced equal to water-colour drawings, without the use of water or any other fluid, the various colours blending together with perfect harmony, beauty, and richness. It can be cut to a fine point, and is thus capable of giving a very delicate outline. For sketching from nature, the great advantages resulting from the adoption of the CRETA LÆVIS must be obvious, as without the use of water, palette, brushes, &c. all the various tints can be obtained with a truthfulness that cannot be surpassed,—thus superseding every other method in general use. The drawings may be carried in a portfolio with safety, as, unlike other crayons, they will neither rub off, nor suffer injury by coming in contact with the usual contents of a portfolio. The CRETA LÆVIS will not be affected by heat or change of climate. Specimens may be seen at the Polytechnic Institution, Regent-street; Royal Adelaide Gallery, Strand; and all respectable Stationers, where the CRETA LÆVIS may be had in sets of twelve, eighteen, twenty-four, and thirty-six, with or without boxes.

Instructions for Use.—In order to produce the delicate shades, the chalk must be cut to a fine point, and worked very lightly on the paper, blending the colours until the required tint be obtained. The deep shades merely require a broader point and increased pressure.—Bristol Board, Crayon Paper, or, in fact, any papers with a fine even surface, but not glazed, are well adapted for the CRETA LÆVIS.

WOLFF & SON beg to recommend their newly-invented SKETCHING PENCILS, or Permanent Black Chalks:—B B, very black, for foreground; H B, middle tint; N, neutral tint for distance. These Pencils are peculiarly adapted for sketching heads and landscapes, and are capable of producing a beautiful effect with very little labour. Having an adhesive quality, the drawings may be transmitted without fear of injury.

The method of using the CRETA LÆVIS is taught by Mr. W. H. KEARNEY, Member of the New Water-Colour Society.

*** Wolff & Son are desirous of opening an Agency with respectable Country Booksellers and Stationers for the sale of the above.

Manufactory, 23, Church-street, Spitalfields.

E. WOLFF & SON'S newly-invented MATHEMATICAL PENCILS, for Mathematicians, Engineers, Architects, &c., manufactured of Extra Hard Lead, and warranted to retain a very fine Point.—E. WOLFF & SON, in introducing their Extra Hard Lead Pencils for Mathematical and Architectural purposes, beg to draw attention to the advantages resulting from their adoption in preference to the ordinary Pencils. They are made of six distinct sizes, by which means they can be fitted to all instruments, and are so constructed that each pencil may be cut in halves without waste, thus making two Pencils, each of a length the most convenient for use, and obviating the difficulties existing with respect to the ordinary pencil.—E. WOLFF & SON have also Half-round Pencils suitable for the Spring Bow Instrument, thus preventing the necessity of dividing the Pencil down the centre. They are also manufactured of extremely hard Lead, of the finest quality, which will retain a very fine point, and give a clear, even, and distinct line.

PATTERN OF SIZES.

*** May be had of most respectable Stationers, and of the Manufacturers, 23, Church-street, Spitalfields, London.

Wolff & Son are desirous of opening an Agency with respectable Country Booksellers and Stationers.

A Sample of each Size will be sent by post to any part of the Kingdom on receipt of postage stamps equal to the amount.

A. M. PERKINS'S PATENT HOT-WATER APPARATUS, FOR WARMING AND VENTILATING.

FOR the successful operation of the above Plan, references may be made to the British Museum, the Chapels Royal, Whitehall and St. James's, Marlborough House, and Whitley Court, the residences of Her Majesty the Queen Dowager, his Grace the Archbishop of Canterbury's Palaces at Lambeth and Addington; his Grace the Duke of Beaufort's at Badminton; his Grace the Duke of Wellington's at Strathfieldsaye; his Grace the Duke of Hamilton's Palace at Hamilton; the Lord Chancellor's and Vice-Chancellor's Courts at Westminster and Lincoln's Inn; the Insolvent Debtors Court; the Old Bailey Sessions House; School of Design and Tithe Commissioners' Offices, Somerset House; Register of Designs and Record-office; Lincoln's-inn and Gray's-inn Chapels; Inner Temple Hall; County Fire Office; Register Office and Justiciary Courts, Edinburgh; Charles Babbage's, Esq. Dorset-street, Manchester-square; and many other Private Residences, Public Buildings, Churches, Hospitals, Lunatic Asylums, Union Poor Houses, Prisons, Hothouses, Conservatories, &c. &c.

Manufactory, No. 6, Francis-street, Gray's-inn-road.

F. ARNOLD'S INDELIBLE MARKING INK, for Silk, Linen, and Cotton, which requires no preparation, and is warranted not to injure the finest fabric.

In neat cases, with directions for use.....1*s.* each.
Superior India Rubber Court Plaister, in cases..... 6*d.* and 1*s.*
Purified Violet, Camphor, and Charcoal Tooth-powder, recommended by the faculty, in boxes .. 6*d.* and 1*s.*
Medicated Pomatum, strongly recommended for the nursery and toilet, in pots..... 6*d.*

To be had of every respectable Stationer and Chemist in Town and Country.—Wholesale and Export Warehouse, 12, Curzon-street, May Fair.—Be particular in asking for F. Arnold's, as none other is genuine.

BUTTER MADE IN TEN MINUTES—By the Newly Invented Block Tin Churn, manufactured by Attwood, Wimble and Warner, Lewes, Sussex. Delivered to any part of London, carriage paid.

Sizes, No.	00	0	1	2 and	3.
Churn about	3	4	7	14 ,,	27 lb.
Price,	22*s.*	23*s.* 6*d.*	25*s.*	35*s.* ,,	42*s.*

Larger or smaller sizes, made to order. Pans for ditto to stand in, 3*s.* 6*d.*, 4*s.*, 4*s.* 6*d.*, 5*s.*, and 7*s.* To be seen in London, at Benham's, 19, Wigmore-street, Cavendish-square; Livermore & Sons, 30, Oxford-street; Cottam & Hallen, Winsley-street, Oxford-street; Bailey & Son, 71, Gracechurch-street; Wright's Range Warehouse, near the Monument. Export Agent: Barnes & Co. 109, Fenchurch-street; and of all ironmongers throughout England.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 21*b*, Bread-street, City, and by Slodden & Stocking, 42, High-street, Marylebone; W. Gethem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 129, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

METCALFE'S NEW PATTERN TOOTH BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-brushes, with the durable untreated Russian bristles, which do not soften like common hair. Flesh Brushes, of improved graduated and powerful friction. Velvet brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment,

130, B., Oxford-street, one door from Holles-street.

Caution—Beware of the words "From Metcalfe's," adopted by some houses.

ALLNUTTS' FRUIT LOZENGES, for Coughs, Colds, Sore Throats, Hoarseness, &c., prepared solely from the BLACK CURRANT.—In the above preparation the acidity of the Black Currant alone is introduced, and that in the highest degree of concentration. The Lozenges may therefore be strongly recommended (even to persons of the most delicate constitutions), in the above complaints, as they tend to allay inflammation, and particularly to promote a free expectoration. Public speakers and singers will find them of peculiar service. They have been also remarkably useful in cases of the Influenza. The annually increasing sale for the last 30 years of this article, notwithstanding the numerous attempts to equal it, will sufficiently prove its decided superiority to all other preparations of a similar description.—Be careful to ask for "ALLNUTTS' FRUIT LOZENGES," prepared only by the Proprietors, Allnutt & Son, Queen-street, Portsea.—Sold in boxes, at 1*s.* 1½*d.* each, by all Patent Medicine Vendors in the Kingdom.

SHARPE'S SOLUBLE QUININE DENTIFRICE. Recommended and used by the FACULTY, for preserving the TEETH to the latest possible period. The advantages of this truly scientific preparation arise from its holding, in a state of quintessence, the medicinal properties of Bark and Myrrh, which, by a chemical combination, known only to the proprietor, are rendered instantly soluble in the juices of the mouth; at the same time, it is perfectly free from acid, grit, or any pernicious ingredients. By its astringent qualities it prevents decay, eradicates scurvy, and, by exciting healthy action of the gums, prevents their separation from the teeth; or, if subject to bleeding, gives, in most cases, immediate, and, by continued use, permanent relief. It is strikingly beneficial in affections of the mouth, the result of a mercurial or medicinal course; and, when subject to tenderness of the gums arising from cold, its use is a positive preventive of future attacks. The virtue of this celebrated Dentifrice in cleansing, removing incrustations, and speedily giving a beautiful whiteness to the teeth, as well as sweetness to the breath, is unrivalled by any other Tooth Powder, whilst its refreshing bitter imparts an agreeable sensation to the most discriminating palate.

Be careful to observe the Proprietor's Signature on the Government stamp.—Prepared and sold by G. Y. SHARPE, Chemist, Islington-green, London. To be procured of all respectable Medicine Venders, in boxes at 1*s.* 9*d.* and 2*s.* 9*d.* each; and through the following Agents:—Sanger, 150, Oxford-street; Butler, 4, Cheapside; Hannay & Co. 63, Oxford-street; Edwards, 67, St. Paul's Churchyard; Barclay & Sons, 95, Farringdon-street; Sutton & Co. 10, Bow Churchyard; and J. D. Best, 14, Grosvenor-street West, Eaton-square.

N.B. Orders by post immediately attended to.

NEW FARMERS' NEWSPAPER.

TO LANDLORDS AND TENANTS.

THE time has come when Landlords and Tenants, large Farmers and small, must devote their anxious attention to improved cultivation—when, in the words of Sir Robert Peel, **"All must learn how, in the shortest time and at the least expense, to produce the greatest quantity of food, vegetable or animal, without permanent injury to the land."** To accomplish this, no means can be so effectual as that which brings the results of Experience and Science before every man, in a cheap form. For this purpose THE AGRICULTURAL GAZETTE is to be established.

The Proprietors are aware of the difficulties of dealing with the many details of cultivation without an acquaintance with circumstances, often as varying as places. They condemn the idea of conducting farming operations upon one invariable plan, and, while they welcome science as the best auxiliary of practice, they regard crude speculations as the most dangerous of delusions. But, they also feel that in Agriculture, as in all other arts, there are general principles upon which successful farming must depend: that there are practical errors which no local circumstances can justify; in short, that there is room for improvement even in those branches which are best understood. No one man can be competent to deal with the multifarious questions affecting husbandry, and the duty of the Editor of such a Paper as THE AGRICULTURAL GAZETTE is to make known the knowledge of all. It is to practical Farmers that the Proprietors trust for the means of carrying out their views, and not to the talents of any individual. While, therefore, they state that the Editor of THE AGRICULTURAL GAZETTE will be a gentleman well acquainted with the best kind of Farming, in which he is actively engaged, they feel it to be of far more importance to announce that they have received promises of assistance from all the most distinguished Practical Agriculturists.

With FREE TRADE, FIXED DUTIES, SLIDING SCALE, &c. &c., THE AGRICULTURAL GAZETTE will in no way concern itself—such questions can only be of temporary interest; whereas THE AGRICULTURAL GAZETTE will be devoted to the investigation of those great truths which human laws cannot affect.

The Practice of Agriculture—its Science—Animal and Vegetable Physiology—Improvements in Implements—better modes of Husbandry—results of well-conducted experimental Farming—Growth and Rotation of Crops—Stock—Drainage—Irrigation—Foresting—Road making—Farm-Buildings—Labourers—in short, whatever affects the beneficial employment of capital in land—will form topics of consideration. Reports will be given of the English, Scotch, and Irish Agricultural Societies—London Market Prices of Corn, Hay, and Cattle, and the Weekly Averages. Replies to questions connected with the object of the paper will also be furnished weekly.

Considering the union which exists between Horticulture and Agriculture, it has been thought advisable to make THE AGRICULTURAL GAZETTE an addition to the GARDENERS' CHRONICLE, edited by DR. LINDLEY, and so extensively known; but that there may be ample room for discussion, that Paper *will be increased one-half in size without additional charge*—thus Twenty-four Columns will be occupied, as at present, by Horticulture, and Twenty-four by the General News of the Week, whilst

Twenty-four Columns will be devoted to Agriculture.

On Saturday, January 6th, will be published, price SIXPENCE, stamped to go free by post,

THE FIRST NUMBER OF

THE GARDENERS' CHRONICLE AND AGRICULTURAL GAZETTE:

A Weekly Record of Rural Economy and General News.

THE HORTICULTURAL PART EDITED BY PROFESSOR LINDLEY.

THE principle on which the Gardening part of this paper has been conducted has been to make it a weekly record of everything that bears upon Horticulture, Floriculture, Arboriculture, or Garden Botany, and such Natural History as has a relation to Gardening, with Notices and Criticisms of all works on such subjects. Connected with this part are WEEKLY CALENDARS OF GARDENING OPERATIONS, given in detail, and adapted to the objects of persons in every station of life; so that the Cottager with a few rods of ground before his door, the Amateur who has only a greenhouse, and the Manager of extensive gardens, are alike informed of the routine of operations which the varying seasons render necessary. It moreover contains Reports of Horticultural Exhibitions and Proceedings—Notices of Novelties and Improvements—in short, everything that can tend to advance the profession, benefit the condition of the workman, or conduce to the pleasure of his employer; accompanied with Woodcuts, whenever the matter treated of requires that mode of illustration.

To this Farming, as explained above, will now be added.

Lastly, that description of domestic and political News is introduced which is usually found in a Weekly Newspaper. It is unnecessary to dwell on this head further than to say, that the Proprietors do not range themselves under the banners of any party; their earnest endeavours have been to make THE GARDENERS' CHRONICLE a full and comprehensive *Record of Facts* only—a Newspaper in the true sense of the word—leaving the reader to form his own opinions; their object being the elucidation of the laws of Nature, not of man. The reader is thus furnished, IN ADDITION TO THE PECULIAR FEATURES OF THE JOURNAL, with such information concerning the events of the day, as supersedes the necessity of his providing himself with any other Weekly Paper.

The Proprietors are happy to announce that the following distinguished Botanists, Florists, and Practical Gardeners have already enriched the GARDENERS' CHRONICLE by their communications:—

Professor Henslow, Cambridge
Professor Royle, King's College, London
The Hon. and Very Rev. W. Herbert, Dean of Manchester
The Hon. and Rev. Charles Bathurst
Hon. W. Fox Strangways
Sir Oswald Mosley, Bart.
Sir W. J. Hooker, Royal Gardens, Kew
Dr. Horner, Hull
Dr. Lankester, F.L.S.
Rev. J. M. Berkeley
J. Bateman, Esq. Knypersley
Mr. W. Billington, Oswestry
Mr. Ingram, Gardener to Her Majesty at Windsor
Mr. Paxton, Gardener to the Duke of Devonshire
Mr. Alexander, Gardener to the Duke of Leinster
Mr. Ferguson, Gardener to the Duke of Buckingham
Mr. Patterson, Agent to the Duke of Hamilton
Mr. Spenser, Gardener to the Marquis of Lansdowne
Mr. Elliott, Gardener to the Earl of Tyrconnell
Mr. Henderson, Gardener to the Earl Fitzwilliam
Mr. Frost, Gardener to Lady Grenville
Mr. Haythorn, Gardner to Lord Middleton
Mr. Halliday, late Gardener to Lord Sondes
Mr. Brown, Gardener to Lord Southampton
Mr. Errington, Gardener to Sir P. Egerton, Bart.
Mr. Fortune, Hothouse Dept., Horticultural Gardens, Chiswick
Mr. Thompson, Fruit Dept., Horticultural Gardens, Chiswick

Professor Daubeny, Oxford
Professor Graham, Edinburgh
The Hon. and Rev. L. Vernon Harcourt
Hon. Algernon Herbert
Sir George Mackenzie, Bart.
Sir Charles Wolesey, Bart.
Dr. Bevan, Llanferry
Dr. Gregory, Aberdeen
Dr. Ingram, President of Trinity College, Oxford
Rev. J. B. Reade
G. Bentham, Esq. late Secretary of the Horticultural Society
John Curtis, Esq. F.L.S.
L. W. Dillwyn, Esq., Sketty Hall
J. D. Llewelyn, Esq., Penllergare
Mr. Bailey, Gardener to the Archbishop of York
Mr. Mackintosh, Gardener to the Duke of Buccleuch
Mr. Moffatt, Gardener to the Duke of Newcastle
Mr. Tillery, Gardener to the Duke of Portland
Mr. Cooper, Gardener to the Earl Fitzwilliam
Mr. Bowers, Gardener to the Earl of Lucan
Mr. Forsyth, Gardener to the Earl of Shrewsbury
Mr. Buchan, Gardener to Lord Bagot
Mr. Beaton, Gardener to Sir W. Middleton, Bart.,
Mr. Booth, Gardener to Sir C. Lemon, Bart.
Mr. Whiting, Gardener to H. T. Hope, Esq. M.P.
Mr. James Drummond, Gardener, Blair Drummond
Mr. Gordon, Hardy Dept., Horticultural Gardens, Chiswick

OFFICE FOR ADVERTISEMENTS AND COMMUNICATIONS, 3, CHARLES STREET, COVENT GARDEN, LONDON.

GILBERT J. FRENCH, Bolton-le-Moors, Lancashire.

METROPOLITAN ASSOCIATION, for IMPROVING the DWELLINGS of the INDUSTRIOUS CLASSES.

Patrons.

Lord Ashley, M.P.
The Right Hon. the Earl of Devon.
The Viscount Ebrington, M.P.
The Right Hon. Viscount Morpeth.
The Rev. Joseph Bowles, D.D., Woodstock Rectory.
The Rev. W. W. Champneys, M.A., Whitechapel.
The Rev. Thomas Dale, M.A., Fleet-street.
The Rev. W. S. Gilly, D.D., Durham.
Sir Benjamin Heywood, Bart.
Major Jebb, R.E.
The Rev. Dennis Kelly, M.A., Gough-square, Fleet-street.
The Hon. and Rev. Baptist W. Noel, M.A., Milman-street, Bedford-row.
Sir John Pirie, Bart.
The Rev. Josiah Pratt, B.D., Finsbury Circus.
The Rev. J. H. Spry, D.D., St. Mary-le-bone.
W. R. C. Stansfeld, Esq., M.P.
The Rev. W. Stone, M.A., Spitalfields.
Sir Frederick Trench, M.P., K.C.H.

Provisional Committee.

John Dunlop, Esq., Woolwich.
Charles Gatliff, Esq., 19, Coleman-street.
T. F. Gibson, Esq., 21, Spital-square.
J. D. Powles, Esq., New Bank-buildings.
John Reid, Esq., Spital-square.
Thos. Southwood Smith, Esq., M.D., 36, New Broad-street.
John William Tottie, Esq., 18, South Parade, St. James's Park.
Wm. Arthur Wilkinson, Esq., Camberwell-terrace, North.

Bankers.

Messrs. Barclay, Bevan, Tritton & Co., 54, Lombard-street.

In seeking the support of the public to the above Association, the Provisional Committee beg to call attention to the various Reports which have been laid before Parliament respecting the condition of the Working Classes, showing the existence of an amount of suffering and evil, arising from the inadequate or improper state of their *dwellings*, so great as to induce the belief that a remedy only needs to be pointed out in order to be applied.

The object of this Association is to provide a remedy for the existing evils, by enabling the labouring man to procure a comfortable, cleanly, and healthy habitation, at a less expense than is at present paid for very inferior and unhealthy accommodation arising from want of ventilation, bad drainage, and the crowded state of the apartments.

To effect this—it is proposed to erect, 1st, Dormitories for single men, or large rooms divided into compartments, with a separate bed to each occupier, which could be afforded at as low a rate as is paid at present by each person when three and four sleep in one bed.

2nd, Well-drained and ventilated buildings, to be let to families in sets of rooms, with an ample supply of water on each floor.

It is intended that a fair return for the capital invested shall be obtained; eleemosynary relief not being desired as a part of the undertaking, since it would destroy the independence of those whom it is wished to benefit.

The funds are intended to be raised in shares of 25l.; and the liabilities of a joint-stock company will be avoided by obtaining letters patent under the 1 Vic. c. 73, sec. 2 & 4, which will limit the responsibility of Shareholders. 5l. per share will be required to be paid into the Bankers' hands.

No expenses have been incurred by the Provisional Committee, except those of printing the Prospectuses, lithographing the Plans, and advertising, and no outlay will be made in the execution of the objects of the Association, without calling the Subscribers together, and giving them an opportunity of stating their opinions upon the prospects of the Association.

The Provisional Committee therefore invite all those who are desirous of improving the dwellings of the Working Classes to co-operate with them in this most important object, and request that those who are so disposed, will signify the amount which they will contribute, under the assurance that they will not render themselves liable for any amount beyond the sum for which they subscribe, and that they will have the opportunity of retiring from the undertaking before any works are commenced, on the payment of such portion of their subscription as may be necessary to defray the preliminary expenses.

Communications and applications for Shares to be addressed to Mr. C. Gatliff, Hon. Sec., 19, Coleman-street; or to Mr. C. R. Weld, 11, Regent-street, of whom Prospectuses and Plans may be had.

NATIONAL PROVIDENT INSTITUTION.—The EIGHTH ANNUAL MEETING of the Members of this Institution will be held at the Office, No. 48, Gracechurch-street, on FRIDAY, the 15th INSTANT, at ONE O'CLOCK PRECISELY, to receive the Report of the Directors for the current year.

JOSEPH MARSH, Secretary.

December 7, 1843.

PENINSULAR and ORIENTAL STEAM-NAVIGATION COMPANY.—At the THIRD ANNUAL GENERAL MEETING of this Company, held 29th of November, at their offices in St. Mary-Axe,

Sir JOHN CAMPBELL, K.C.H., in the Chair,

The following resolutions were agreed to:—

It was moved, seconded, and unanimously carried—

1. That the Report now read be received, printed, and circulated amongst the proprietors.

2. That a Dividend of 3½ per cent., recommended in the report now read, be payable on or after the 20th December, 1843, between the hours of twelve and three o'clock on each day, to such proprietors as are duly qualified to receive the same.

3. That Sir John Campbell, K.C.H., and James Hartley, Esq., be re-elected Directors of this Company, in conformity with the provisions of the deed of settlement.

4. That the Honourable John T. Leslie Melville, and Jameson Hunter, Esq., be re-elected the Auditors for this Company for the ensuing two years.

5. That the Thanks of this Meeting be tendered to the three Managing Directors, for the zeal, ability, and persevering exertions, by which they have promoted the interests of this Company.

6. That the remuneration to the Directors be fixed at Two Guineas for each day's attendance for the future.

7. A Vote of Thanks and Confidence was then moved to the Chairman, which was carried unanimously, and the meeting adjourned.

Just published, with Illustrations, price 3s. 6d. cloth,

GLIMPSES of NATURE, and OBJECTS of INTEREST DESCRIBED, during a VISIT to the ISLE OF WIGHT. Designed to assist and encourage Young Persons in forming Habits of Observation. By Mrs. LOUDON.

LONDON, SATURDAY, DECEMBER 9, 1843.

REVIEWS

Contributions to the Edinburgh Review. By Francis Jeffrey. 4 vols. Longman & Co.

A Review is a sort of literary abstraction, to which an imaginary individuality is ascribed by the public, who are, generally speaking, either ignorant of the precise source of each contribution, or unconcerned about the question. The number of readers is comparatively few who, on the appearance of any given article in any given periodical, either know or seek to ascertain from the head of what Jupiter the Minerva has proceeded. The invisible and mystic *We* is the generally recognized parent of all the wit, learning, criticism, and philosophy that adorns our periodical literature, just as that equally impalpable personage, Nobody, is the admitted author of nine-tenths of the mischief that is done in our private houses. The public conception, for example, has long arrayed the "We" of the *Edinburgh Review*, with a combination of all the merits and fascinations of its Jeffreys, its Smiths, its Macaulays, and the rest of the corps which has so long and so ably sustained its reputation. It was not a Jeffrey who ridiculed the White Doe of Rylstone, or a Smith who satyrized Methodists and Man-traps, or a Macaulay who exposed the lubricities of a Croker; but it was the air-drawn Aristarchus himself, in his robe of blue turned up with yellow, who performed all these and the like exploits. The feeling of power, created by this conventional ascription to an imaginary sole corporation of the gifts and qualities belonging to the several members of what was in reality a corporation aggregate, was not materially diminished by the fact, that here and there a few individuals were in the secret of the craft, and perfectly acquainted with the authorship of every article that commanded attention. Still it was the "We" that wrote, ridiculed, praised, censured, attacked, defended, or abused. It was always the *Edinburgh Review* in the abstract, not the concrete of any editor or any contributor, that achieved the literary triumph, performed the party service, or haply perpetrated the political or the literary injustice. The review was taken to be the substance, and the reviewers were but as shadows, seen in the obscure distance, whether they flitted in the Canongate, or glided through St. Paul's Churchyard.

But of late years the veil has been, to a great extent, removed from the public view, and this eminent periodical has been largely divested of its visionary character. The *We* has been analyzed, and resolved into its component *egos*. The Review may be said to be plucked of its plumage by the reviewers; and if we may for a moment attribute a consciousness and a feeling to a book in a blue and yellow cover, the sensations of "the Edinburgh" must be, in some measure, those of the unfortunate daw in the fable. Mr. Sydney Smith was, we believe, the first to identify and extract the glossy feathers that were his; Mr. Macaulay was the next to pull out his rightful plumes; and now Mr. Jeffrey reclaims his own shining property in handfuls. It is not, however, our design to censure the course taken by any of these distinguished *literati*, or to blame any tributary to a periodical work for giving his writings to the world in a new form, and with the addition or the authority of his name. We allude to the system of thus republishing contributions to public journals rather as indicative of an approaching change in the character of periodical literature; for it seems clear, that the prestige of a review or a newspaper cannot but be considerably impaired by whatever tends to destroy the general impression of its unity, always an important element in the idea of power. The craft of criticism is going the way of the craft of priesthood and the craft of politics. The world is peeping behind all the curtains that formerly concealed the machinery of moral influence, and often the persons of those who worked it. The shadows of great names no longer overcome us. Nor is this all: not only is a great literary organ, as it were, unspiritualized, and presented to us incarnate—a process by which it loses all the imposing power that belongs to the unseen and the unknown—but when the reviewer appears in the flesh, its weaknesses are apt to beset and embarrass him; he is no longer the iron man who, as he walked in darkness, smote without compunction all that crossed his path; his disposition is to be too conceding and too penitential; his alacrity is somewhat too great to confess in the body the least peccadillo committed in the spirit.

Rigour has gone to bed:

time has, of course, moderated and chastened many opinions and many judgments, and the sobriety of three-score hesitates to adopt the eloquent escapades and the glittering extravagancies of a pen of thirty. This is right as regards the man, but is it beneficial as regards the journal or review? To us it appears, that the errors of youthful rapture, proclaiming principles warmly embraced; advancing hardy theories of virtue or of science; diffusing its own literary enthusiasm, and waging impetuous war with folly in its thousand shapes, are the most venial of transgressions: nay, more, we think the cause of virtue and of letters vitally concerned in cherishing this generous heat, with all its occasional tendencies to burn with too fierce a flame; and even though, like erroneous zeal, it may sometimes happen to consume charity.

We are not for applying the severe principles that should regulate tribunals of law to the judgment-seat of literature. There could be no writing with energy and power in the frigid atmosphere of Westminster Hall, whence passion is exiled, and where enthusiasm must never come. We do not, of course, apologize for any heinous licentiousness of the pen; but we are tolerant of those who go daring lengths in criticism, when it is plain that an honest fervour animates them, and when, upon the whole, their labours are conducive, or believed to be conducive, to the cause of truth, and the welfare of their species. Thus, believing that literary zeal is essential to the consequence of a literary journal, and ready to forgive its occasional excursions beyond the precise frontier which sober reflection would lay down, we view with no satisfaction whatever seems to have a tendency to lower the high temperature of authorship, and teach the public to peruse hereafter with suspicion all that is written with a touch of fire, and comes fresh and glowing from the pen of single-minded youth. We readily allow that no generous mind could suffer a republication of the opinions and judgments of former days to go abroad into the world unaccompanied with a candid statement of the modifications which age and reflection had suggested; but this is, with us, a reason for regretting that such republications should take place; for we are disposed to think, that, upon the whole, more of harm than of good is done by such confessions. The objection would be of no force, perhaps, if the Review was always to be conducted by the same band of veterans who first gave it celebrity. It would then be gratifying to be informed that the critic had sowed his literary wild oats, and that rash sentences or violent invectives would no more disfigure his productions; but writers succeed each other like the waves of the sea, or the leaves of the forest; and wherever there is youth there will be youthful impetuosity and youthful fervour—still generating abuses of the same kind—still overleaping, at times, the bounds of legitimate stricture, whether on the measures of a poet, or the measures of a minister. To correct such errors is certainly desirable, and as far as this may be effected by laying down better canons of criticism, or inculcating a severer literary morality, we think it an object highly worthy of attention; but we deprecate the recantations of old reviewers, their tendency being to lead the public to read with distrust whatever is composed with vigour—to shake the credit of important organs of opinion, and by shaking their credit to impair their efficiency.

The reader will observe that we have spoken of *tendency* only, wishing to guard ourselves against being supposed to impute any material recantations to the eminent author of the volumes before us. Let us quote the following passage from his preface:—

"The Edinburgh Review, it is well known, aimed high from the beginning:—And, refusing to confine itself to the humble task of pronouncing on the mere literary merits of the works that came before it, professed to go deeply into *the Principles* on which its judgments were to be rested; as well as to take large and Original views of all the important questions to which those works might relate. And, on the whole, I think it is now pretty generally admitted that it attained the end it aimed at. Many errors there were, of course—and some considerable blunders:—abundance of indiscretions, especially in the earlier numbers; and far too many excesses, both of party zeal, overweening confidence, and intemperate blame. But with all these drawbacks, I think it must be allowed to have substantially succeeded—in familiarising the public mind (that is, the minds of very many individuals) with higher speculations, and sounder and larger views of the great objects of human pursuit, than had ever before been brought as effectually home to their apprehensions; and also, in permanently raising the standard, and encreasing the influence of all such Occasional writings; not only in this country, but over the greater part of Europe, and the free States of America: While it proportionally enlarged the capacity, and improved the relish of the growing multitudes to whom such writings were addressed, for 'the stronger meats' which were then first provided for their digestion."

There is no doubt that Mr. Jeffrey is fully entitled to the credit he here asks for, on the part of the Review which he long and ably edited and supported. But we question whether he was called upon to say so much as he here says about the aberrations of its early days, most of which are to be accounted for, we dare to say, by the keeping of bad company; and we think we could easily name one associate of the young 'Edinburgh,' who contributed his full share to mislead it from the paths of propriety. No retractation, however, upon his part, is either to be wished or expected; he appears too much engaged in recanting his old principles to have time to apologize for the misdemeanours of his old pen. It is but right to give Mr. Jeffrey's own account of the present republication:—

"The papers in question are the lawful property, and substantially at the disposal, of the publishers of the Edinburgh Review: and they, having conceived an opinion that such a publication would be for their advantage, expressed a strong desire that I should allow it to go out with the sanction of my name, and the benefit of such suggestions as I might be disposed to offer for its improvement: and having, in the end, most liberally agreed that I should have the sole power both of determining to what extent it should be carried, and also of selecting the materials of which it should be composed, I was at last persuaded to agree to the proposition: and this the more readily, in consequence of intimation having been received of a similar publication being in contemplation in the United States of America;—over which, of course, I

Digitized by Google

could not, under any arrangement, expect to exercise the same efficient controul."

In his further defence he makes the following statements :—

"First, that what I now venture to reprint, is but a small part—less I believe than a third,—of what I actually contributed to the Review; and, Secondly, that I have honestly endeavoured to select from that great mass—*not* those articles which I might think most likely still to attract notice, by boldness of view, severity of remark, or vivacity of expression—but those, much rather, which, by enforcing what appeared to me just principles and useful opinions, I really thought had a tendency to make men happier and better."

In a subsequent passage he informs us, that he considers his own share in whatever services the *Edinburgh Review* may have performed, to consist chiefly in "the endeavour to combine ethical precepts with literary criticism, and impress his readers with a sense of the close connexion between sound intellectual attainments and the higher elements of duty and enjoyment." We think Mr. Jeffrey has not over-rated his merits in this respect. A survey of these volumes disposes us to assign him a distinguished place amongst the moral writers of our time; and we should think, that upon the whole, the form of the Review is the most favourable for the display of those light troops with which the battles of our airy modern philosophy are fought. Where it is not a great system that is to be unfolded, connected in all its parts, and forming a grand scientific whole, but where no more is aimed at than the application of the recognized principles of a certain school to every new combination of public events or social conditions, there cannot be a more convenient organ for a writer than a periodical publication; and not amongst the least advantages of such an instrument are the opportunities it affords for everlastingly hammering a particular set of notions into the public understanding. The philosophy that consists in common sense vigorously applied to all the concerns of public and private life—that philosophy of which Montaigne was the father—cannot be inculcated more happily, or with fairer prospects of success, than through the hundred various mediums afforded by the plan of a Review. It is thus stripped of all the severities of doctrine and divested of all the tedious offensiveness of pedantry. Like an object not only exhibited in the plain light of day, but passed consecutively through all the charming colours of the prism, an opinion pertinaciously advocated in a literary journal of this description is presented to the public under all aspects, sometimes directly and abstractedly, but more frequently incidentally, in connexion with whatever subject of immediate interest may be in hand, whether a poem of Crabbe, a novel of Scott, a mission of Mrs. Fry, or a voyage of Columbus. Making due allowance for the temptations to ramble, to which all writers in periodicals are exposed, and for the errors of precipitation and flippancy to which they are peculiarly subject, there is a very large amount of instructive matter in these volumes. The bread bears a fair proportion to the sack; the unity of purpose is obvious, and nobody can doubt that the object of Mr. Jeffrey has been loftier than the support of a political party, or the success of a literary commercial undertaking.

It is difficult to quote from a work so miscellaneous as this naturally is; and the only principle of selection that occurs to us is, to make such quotations as, relating to subjects of continual interest, are fair specimens of the writer's best manner. Take the following sound estimate of the prose of Swift :—

"Of his style, it has been usual to speak with great, and, we think, exaggerated praise. It is less mellow than Dryden's—less elegant than Pope's or Addison's—less free and noble than Lord Bolingbroke's—and utterly without the glow and loftiness which belonged to our earlier masters. It is radically a low and homely style—without grace and without affectation; and chiefly remarkable for a great choice and profusion of *common* words and expressions. Other writers, who have used a plain and direct style, have been for the most part jejune and limited in their diction, and generally give us an impression of the poverty as well as the tameness of their language; but Swift, without ever trespassing into figured or poetical expressions, or ever employing a word that can be called fine, or pedantic, has a prodigious variety of good set phrases always at his command, and displays a sort of homely richness, like the plenty of an old English dinner, or the wardrobe of a wealthy burgess. This taste for the plain and substantial was fatal to his poetry, which subsists not on such elements; but was in the highest degree favourable to the effect of his humour, very much of which depends on the imposing gravity with which it is delivered, and on the various turns and heightenings it may receive from a rapidly shifting and always appropriate expression. Almost all his works, after the Tale of a Tub, seem to have been written very fast, and with very little minute care of the diction. For his own ease, therefore, it is probable they were all pitched on a low key, and set about on the ordinary tone of a familiar letter or conversation; as that from which there was little hazard of falling, even in moments of negligence, and from which any rise that could be effected, must always be easy and conspicuous. A man fully possessed of his subject, indeed, and confident of his cause, may almost always write with vigour and effect, if he can get over the temptation of writing finely, and really confine himself to the strong and clear exposition of the matter he has to bring forward. Half of the affectation and offensive pretension we meet with in authors, arises from a want of matter,—and the other half, from a paltry ambition of being eloquent and ingenious out of place. Swift had complete confidence in himself; and had too much real business on his hands, to be at leisure to intrigue for the fame of a fine writer;—in consequence of which, his writings are more admired by the judicious than if he had bestowed all his attention on their style. He was so much a man of business, indeed, and so much accustomed to consider his writings merely as means for the attainment of a practical end—whether that end was the strengthening of a party, or the wounding of a foe—that he not only disdained the reputation of a composer of pretty sentences, but seems to have been thoroughly indifferent to all sorts of literary fame. He enjoyed the notoriety and influence which he had procured by his writings; but it was the glory of having carried his point, and not of having written well, that he valued."

The hollowness of fashionable society in great cities is admirably accounted for in the following passage from a review of the Memoirs of De Grimm. The writer ably generalizes the impression of society in Paris produced by that attractive work :—

"Whenever there is a very large assemblage of persons who have no other occupation but to amuse themselves, there will infallibly be generated acuteness of intellect, refinement of manners, and good taste in conversation;—and, with the same certainty, all profound thought, and all serious affection, will be generally discarded from their society. The multitude of persons and things that force themselves on the attention in such a scene, and the rapidity with which they succeed each other and pass away, prevent any one from making a deep or permanent impression; and the mind, having never been tasked to any course of application, and long habituated to this lively succession and variety of objects, comes at last to require the excitement of perpetual change, and to find a multiplicity of friends as indispensable as a multiplicity of amusements. Thus the characteristics of large and polished society, come almost inevitably to be, wit and heartlessness—acuteness and perpetual derision. The same impatience of uniformity, and passion for variety, which gives so much grace to their conversation, by excluding tediousness and pertinacious wrangling, make them incapable of dwelling for many minutes on the feelings and concerns of any one individual; while the constant pursuit of little gratifications, and the weak dread of all uneasy sensations, render them equally averse from serious sympathy and deep thought. They speedily find out the shortest and most pleasant way to all truths, to which a short and a pleasant way can readily be discovered; and then lay it down as a maxim, that no others are worth looking after—and in the same way, they do such petty kindnesses, and indulge such light sympathies, as do not put them to any trouble, or encroach at all on their amusements,—while they make it a principle to wrap themselves up in those amusements from the assault of all more engrossing or importunate affections. The turn for derision again arises naturally out of this order of things. When passion and enthusiasm, affection and serious occupation, have once been banished by a short-sighted voluptuousness, the sense of ridicule is almost the only lively sensation that remains;—and the envied life of those who have nothing to do but to enjoy themselves, would be utterly listless and without interest, if they were not allowed to laugh at each other. Their quickness in perceiving ordinary follies and illusions too, affords great encouragement to this laudable practice;—and as none of them have so much passion or enthusiasm left, as to be deeply wounded by the shafts of derision, they fall lightly, and without rankling on the lesser vanities, which supply in them those master springs of human action and feeling."

There is also a fine healthy tone in the observations immediately succeeding :—

"Holding this opinion very firmly ourselves, it will easily be believed that we are very far from *envying* the brilliant persons who composed, or gave the tone to this exquisite society;—and while we have a due admiration for the elegant pleasantry, correct taste, and gay acuteness, of which they furnish, perhaps, the only perfect models, we think it more desirable, on the whole, to be the spectators, than the possessors of those accomplishments; and would no more wish to buy them at the price of our sober thinking and settled affections, than we would buy the dexterity of a fiddler, or a ropedancer, at the price of our personal respectability. Even in the days of youth and high spirits, there is no solid enjoyment in living altogether with people who care nothing about us; and when we begin to grow old and unamuseable, there can be nothing so comfortless as to be surrounded with those who think of nothing but amusement. The spectacle, however, is gay and beautiful to those who look upon it with a good-natured sympathy, or indulgence; and naturally suggests reflections that may be interesting to the most serious. A judicious extractor, we have no doubt, might accommodate both classes of readers, from the ample magazine that lies before us."

The same article affords an instance of the flippancy and presumption of a professional reviewer. Mr. Jeffrey says, "The publication of *a stupid journal of Montaigne's travels* in Italy gives M. Grimm an opportunity of saying something of the essays of that most agreeable veteran." A recent English translation of this "stupid journal" has been lately noticed in our columns; and we leave it to those who have read the extracts which we made from the work upon that occasion, and also to those who have perused the work itself, to say whether Montaigne's travels are obnoxious to the charge of stupidity. We feel tolerably certain that Mr. Jeffrey had never so much as seen the journal which he stigmatizes so unceremoniously. From an article on the Memoirs of Alfieri, we select the following just exposure of a mischievous, vulgar error, and a true account of the phenomenon of brilliant intellectual efforts following long periods of mental stagnation :—

"In reflecting on the peculiar misery which Alfieri and some other eminent persons are recorded to have endured, while their minds were withheld from any worthy occupation, we have sometimes been tempted to conclude, that to suffer deeply from *ennui* is an indication of superior intellect; and that it is only to minds destined for higher attainments that the want of an object is a source of real affliction. Upon a little reflection, however, we are disposed to doubt of the soundness of this opinion; and really cannot

Digitized by Google

permit all the shallow coxcombs who languish under the burden of existence, to take themselves, on our authority, for spell-bound geniuses. The most powerful stream, indeed, will stagnate the most deeply, and will burst out to more wild devastation when obstructed in its peaceful course; but the weakly current is, upon the whole, most liable to obstruction; and will mantle and rot at least as dismally as its betters. The innumerable blockheads, in short, who betake themselves to suicide, dram-drinking, or dozing in dirty nightcaps, will not allow us to suppose that there is any real connexion between ennui and talent; or that fellows who are fit for nothing but mending shoes, may not be very miserable if they are unfortunately raised above their proper occupation. If it does frequently happen that extraordinary and vigorous exertions are found to follow this heavy slumber of the faculties, the phenomenon, we think, may be explained without giving any countenance to the supposition, that vigorous faculties are most liable to such an obscuration. In the first place, the relief and delight of exertion must act with more than usual force upon a mind which has suffered from the want of it; and will be apt to be pushed farther than in cases where the exertion has been more regular. The chief cause, however, of the signal success which has sometimes attended those who have been rescued from ennui, we really believe to be their ignorance of the difficulties they have to encounter, and that inexperience which makes them venture on undertakings which more prudent calculators would decline. We have already noticed, more than once, the effect of early study and familiarity with the best models in repressing emulation by despair; and have endeavoured, upon this principle, to explain why so many original authors have been in a great degree without education. Now, a youth spent in lassitude and dissipation leads necessarily to a manhood of ignorance and inexperience; and has all the advantages, as well as the inconveniences, of such a situation. If any inward feeling of strength, ambition or other extraordinary impulse, therefore, prompt such a person to attempt any thing arduous, it is likely that he will go about it with all that rash and vehement courage which results from unconsciousness of the obstacles that are to be overcome; and it is needless to say how often success is ensured by this confident and fortunate audacity. Thus Alfieri, in the outset of his literary career, ran his head against dramatic poetry, almost before he knew what was meant either by poetry or the drama; and dashed out a tragedy while but imperfectly acquainted with the language in which he was writing and utterly ignorant either of the rules that had been delivered, or the models which had been created by the genius of his great predecessors."

From the same paper take the contrast drawn between the tragedies of France and Italy and the tragedies of England, or of Shakspeare:—

"For our own part, we believe that those who are duly sensible of the merit of Shakespeare, will never be much struck with any other dramatic compositions. There are no other plays, indeed, that paint human nature,—that strike off the characters of men with all the freshness and sharpness of the original,—and speak the language of all the passions, not like a mimic, but an echo—neither softer nor louder, nor differently modulated from the spontaneous utterance of the heart. In these respects he disdains all comparison with Alfieri, or with any other mortal: nor is it fair, perhaps, to suggest a comparison, where no rivalry can be imagined. Alfieri, like all the continental dramatists, considers tragedy as a poem. In England, we look upon it rather as a representation of character and passion. With them, of course, the style and diction, and the congruity and proportions of the piece, are the main objects;—with us, the truth and the force of the imitation. It is sufficient for them, if there be character and action enough to prevent the composition from languishing, and to give spirit and propriety to the polished dialogue of which it consists;—we are satisfied, if there be management enough in the story not to shock credibility entirely, and beauty and polish enough in the diction to exclude disgust or derision. In his own way, Alfieri, we think, is excellent. His fables are all admirably contrived and completely developed; his dialogue is copious and progressive; and his characters all deliver natural sentiments with great beauty, and often with great force of expression. In our eyes, however, *it is* a fault that the fable is too simple, and the incidents too scanty; and that all the characters express themselves with equal felicity and urge their opposite views and pretensions with equal skill and plausibility. We see at once, that an ingenious author has versified the sum of a dialogue; and never, for a moment, imagine that we hear the real persons contending. There may be more eloquence and dignity in this style of dramatising;—there is infinitely more deception in ours."

In the article on De Grimm's Memoirs we find a theory upon the same subject, which is hardly borne out by the facts of the case:—

"In the mean time we shall only remark, that we suspect there is something more than an analogy between the government and political constitution of the two countries, and the character of their drama. The tragedy of the Continent is conceived in the very genius and spirit of absolute monarchy—the same artificial stateliness—the same slow moving of few persons—the same suppression of ordinary emotions, and ostentatious display of lofty sentiments, and, finally, the same jealousy of the interference of lower agents, and the same horror of vulgarity and tumult. When we consider too, that in the countries where this form of the drama has been established, the Court is the chief patron of the theatre, and courtiers almost its only supporters, we shall probably be inclined to think that this uniformity of character is not a mere accidental coincidence, but that the same causes which have stamped those attributes on the serious hours of its rulers, have extended them to those mimic representations which were originally devised for their amusement. In England, again, our drama has all along partaken of the mixed nature of our government,—persons of all degrees take a share in both, each in his own peculiar character and fashion: and the result has been, in both, a much greater activity, variety, and vigour, than was ever exhibited under a more exclusive system. In England, too, the stage has in general been dependent on the nation at large, and not on the favour of the Court;—and it is natural to suppose that the character of its exhibitions has been affected by a due consideration of that of the miscellaneous patron whose feelings it was its business to gratify and reflect."

It is to be recollected, however, that Shakspeare is the most monarchical of all our dramatists, and wrote when the royalist principle overtopped the democratical, although it did not crush it. In addition to this, the tendency of English tragedy, since Shakspeare's age, has been towards "the artificial stateliness, the slow moving of few persons," &c. mentioned as characteristics of the tragic muse on the continent, while the democratic side of our constitution has been gradually gaining ground from the monarchy. For examples, take the tragedies of 'Cato,' 'The Revenge,' 'Pizarro,' and we may also enumerate the tragic dramas of Lord Byron, with still more recent productions on the same model.

These volumes will probably afford us matter for another notice.

Memoirs of Admiral the Earl of St. Vincent.

[Second Notice.]

Our fair readers may be rather surprised at the discipline to which their sex is subject on board a man-of-war, and to learn that no offence is greater than that of wasting *water*. An order issued by Sir John Jervis, when commander-in-chief in the Mediterranean, in July, 1796, shows this very clearly:—

"*To the Respective Captains.*

"There being reason to apprehend that a number of women have been clandestinely brought from England in several ships, more particularly so in those which have arrived in the Mediterranean in the last and the present year, the respective Captains are required by the Admiral to admonish those ladies upon the waste of water, and other disorders committed by them, and to make known to all, that on the first proof of water being obtained for washing from the scuttle-butt or otherwise, under false pretences, in any ship, every woman in the fleet who has not been admitted under the authority of the Admiralty or the Commander-in-chief, will be shipped for England by the first convoy, and the officers are strictly enjoined to watch vigilantly their behaviour, and to see that no waste or improper consumption of water happen in future. J. Jervis."

Nor did the illustrious Nelson think ladies more agreeable guests on board a man-of-war; for, in announcing that his ship was ready for sea, he says to Lord St. Vincent:—"On Sunday we shall get rid of all our *women, dogs*, and *pigeons;* and on Wednesday, with the lark, I hope to be under sail for Torbay."

The advancement of friendless merit is such an honourable trait in the character of a military or naval chief, assailed as they were on all sides by the aristocracy for their patronage, that there is pleasure in adducing some of the numerous instances of such conduct in St. Vincent. In August, 1796, he writes:—

"The persons who fill the vacancies of Lieutenants occasioned by this measure, are Mr. John Davies and a young man of friendless merit, who was not so much as named by ——— either to the Captains Calder or Grey, although we have found him most deserving."

To the First Lord of the Admiralty he wrote on the 18th of September, 1796:—

"I have given an order to Mr. John Ellis to command, as a lieutenant, he being the son of a very old officer, Lieut. John Ellis, whom I knew very many years; and the young man coming very strongly recommended from the Goliah, Sir Charles Knowles having brought him up, I beg leave to place him under your Lordship's protection as a child of the service."

Of all who served under him he considered himself the protector. In a letter, claiming some money due to a deceased seaman, he says he has "no other object than to obtain justice for the heirs of a poor seaman, who died under my command, and whose protector I therefore am."

No part of Mr. Tucker's volumes will be read with more interest than his account of the celebrated battle of St. Vincent, or rather of what relates personally to Sir John Jervis in connexion with that event. But of the battle itself, and of Nelson's conduct on the occasion, a more full and graphic narrative will be found in a little work published a few years since by Col. Drinkwater Bethune. We have only space for what refers more particularly to Jervis:—

"Ships were stationed to watch and report the enemy's motions. From various quarters information came, that they were quite close; but on the 13th of February Captain Foote, in the Niger, frigate, joined, to announce that he had kept sight of them for three days; and on the same day the Minerva, frigate, Captain Cockburn, bearing Commodore Nelson's broad pendant from the Mediterranean, and the Lively, frigate, Captain Lord Garlies, with Sir Gilbert Elliott and suite, from Corsica, joined; and from those Officers also Sir John Jervis received corresponding information. Commodore Nelson immediately shifted his broad pendant into the Captain, and the signal was made to keep close order and to prepare for battle. Lord Garlies, with Sir Gilbert Elliot, and Captain Hallowell, (a passenger in the Victory,) were among Sir John's guests at that day's dinner, which was not a late one; and at breaking-up a toast was drunk,—'Victory over the Dons in the battle from which they cannot escape to-morrow!' It is believed that Sir John Jervis did not go to bed that night, but sat up writing; it is certain that he executed his will. In the course of the first and middle watch, the enemy's signal guns were distinctly heard; and as he noticed them sounding more and more audibly, Sir John made more earnest and particular inquiries as to the compact order and situation of his own ships, as well as they could be made out in the darkness. Long before the break of day, he walked the deck in more than even his usual stern silence. When the gray of the morning of the 14th

Digitized by Google

enabled him to discern his fleet, his first observations were, high approbation of the Captains for 'their admirably close order, and that he wished they were now well up with the enemy, for,' added his confidence in his force, and his thoughtfulness for his desponding Country, 'a victory is very essential to England at this moment.' The morning was very foggy: as the mist cleared in the distance, the Lively and then the Niger signalled 'a strange fleet.' The Bonne Citoyenne was ordered to reconnoitre; but very soon afterwards the Culloden's signal guns announced the enemy. At twenty minutes after nine the signal was made to the Culloden, Blenheim, Prince George, and shortly after to the Irresistible, Orion, and Colossus to chase. The Commander-in-chief still walked the Quarter-deck; and as the hostile numbers were counted, they were duly reported to him by the Captain of the fleet. 'There are eight sail-of-the-line, Sir John.'—'Very well, Sir.' 'There are twenty sail-of-the-line, Sir John.'—'Very well, Sir.'—'There are twenty-five sail-of-the-line, Sir John.'—'Very well, Sir.' 'There are twenty-seven sail, Sir John!' and this was accompanied by some remark on the great disparity of the two forces.—'Enough, Sir, no more of that: the die is cast; and if there are fifty sail, I will go through them,' was to this, in sharp tones, the silencing answer, which so delighted Captain Hallowell, walking beside the Commander-in-chief, that in the ecstacy of the moment he could not help patting his Admiral's back, exclaiming,—'That's right, Sir John; that's right; by G—d we shall give them a d—d good licking.'"

In admiration of a manœuvre of the gallant Troubridge during the heat of the battle, his chief exclaimed:—

"Look, Jackson! look at Troubridge there! he tacks his ship to battle as if the eyes of all England were upon him; *and would to God they were!* for then they would see him to be, what I know him, and, by heavens, Sir! as the Dons will soon feel him. * *

"In the evening, while talking over the events of the day, Captain Calder hinted that the spontaneous manœuvre which carried those *duo fulmina belli*, Nelson and Collingwood, into the brunt of battle, was an unauthorized departure by the Commodore from the prescribed mode of attack! 'It certainly was so,' replied Sir John Jervis; 'and if ever you commit such a breach of your orders, I will forgive you also.'"

The Admiral's official report of the battle was more remarkable for modesty than for any other merit; and is very inferior, as a composition, to the letters of Nelson and Collingwood. He appears to have felt that writing was not his *forte*, for in a private note to Lord Hugh Seymour he says:—

"Our friend Garlies will relate our late transactions much better than I can write them. I wish most heartily the public would be satisfied with accounts of actions in the style of Sir George Walton, for although I do not profess to like fighting, I would much rather have an action with the enemy than detail one."

An Earldom was the immediate reward of this splendid achievement; and it has hitherto seemed extraordinary that he should have at once gained three steps in the Peerage for a single victory, an advancement which had no precedent in modern times, and has never since occurred. But the fact is explained by a letter, printed by Mr. Tucker, from Lord Spencer, First Lord of the Admiralty, dated on the 1st of February, 1797, fourteen days before the battle, but which did not reach him until some time afterwards, informing him that in consequence of "The great exertions, ability, and zeal which you have displayed during your command in the Mediterranean, not only in the actual operation of the fleet under your orders, but in the internal arrangements and discipline which you have established and maintained with such effect," the King would create him a Peer as soon as it was known what title he would like to bear; so that he was in fact, though not in law, a Peer when he defeated the Spanish fleet, and thus he only passed over the grade of Viscount. He wished the title of his Earldom to be that of "Yarmouth," which town he had represented in Parliament, but this being bespoken, he chose "Orford," because it had been borne by Admiral Russell after the battle of La Hogue, and was, he said, a "naval title." To this there were also objections; and "wishing to avoid a charge of arrogance in naming the scene of action for his title," he solicited the King to fix it, and His Majesty very appropriately selected "St. Vincent," which Lord Spencer had before suggested.

The following anecdote is pleasing and characteristic:—

"Shortly after the fleet arrived in the river, a trifling circumstance, and about a *bagatelle*, occurred, which, at first, wore rather a serious aspect, though it terminated satisfactorily. Captain Troubridge had taken a large and valuable Spanish prize, which he conducted to Lisbon. By the then existing treaties no such ship was allowed to go above Belem Castle; but as the merchantman was very badly off for anchors and cables, Lord St. Vincent asked permission of the Lisbon authorities to have her alongside the Ville de Paris, his Lordship's flag-ship, and then lying above the fort. The request was refused, and in a manner by no means the most courteous. But such opposition to his will being absolutely insupportable by 'the Chief,' (as his Lordship was usually styled by the Officers of his fleet,) he made the signal for all the boats of the squadron to tow in the prize. As they passed Belem the Officer of the fort fired some shot at them, which serving only to irritate his Lordship the more, he addressed a note to the British Naval Commissioner, Sir Isaac Coffin, directing him to call upon the Minister of Marine, Don Rodrigo de Souza de Coutinho, and acquaint him that 'if a second outrage happened, he would blow the whole city about their ears: that they were a set of Ladrones, and Don John at their head.' Sir Isaac obeyed. The Minister, greatly agitated, asked 'What would appease the great man?' Sir Isaac's advice was, that Don Rodrigo should immediately repair on board the flag-ship, and make the best explanation he could of the Officer's conduct. The Minister replying that the Officer was 'already cashiered,' accompanied the Commissioner to the Ville de Paris. Lord St. Vincent received Don Rodrigo very graciously. What passed at this interview is not precisely known; but the Minister retired, loudly extolling his Lordship's magnanimity, which had made it a point in the conference, that the Officer who, for firing in obedience to his orders had been cashiered, should be not only restored, but promoted."

A new case in medicine might have arisen out of the following order, and Jack might fairly have demurred to physic and flogging at the same time:—

"A Post Captain is to visit the Hospital every morning, taking it by seniority. Captain Frederick to begin to-morrow. They are to cause strict regularity to be observed in the Hospital, and if they find the patients not to conduct themselves properly and orderly, they are to punish them agreeably to the rules of the Navy, taking a Boatswain's mate with them for the purpose, if they should find it necessary."

On no occasion were the qualities which St. Vincent so eminently possessed for command—firmness, decision, and inflexible justice—so admirably displayed as during the mutiny, when, to use the forcible language of Mr. Fox, "upon the constitution of a single mind, upon the firmness of a single wrist, the fate of an empire may hang." When the disaffection broke out, he was in command of the fleet before Cadiz, and knowing it was impossible to preserve his ships from the contagion, he immediately adopted vigorous measures to prevent its effects. His firmest reliance was on the Marines, who fully justified his confidence, which he repaid by obtaining for the corps the title of "Royal," and by admiration and affection for them to the end of his life. There was much magnanimity and knowledge of a sailor's character in the Admiral's resolution not to prevent the crews of his ships from receiving their letters, lest they might contain instructions or seditious and inflammatory matter from the mutineers in England.

"When the Alcmene joined from England, and conveyed letters from the as-yet-unsubdued mutineers at the Nore to the seamen of this fleet, urging them to resistance, and to enforce the same 'redress of grievances;' and when Captain Dacres, discovering some such inflammatories to be addressed to the Barfleur, submitted whether they might not be withholden,—'Certainly not, Sir,' was the great Admiral's reply. 'Let every letter be immediately delivered; I dare to say the Commander-in-chief will know how to support his own authority.'"

So far did he carry out this principle, that when some letters were detained, because the postage had not been paid in England, he issued an order desiring that the seamen might be informed of the cause of their not receiving their letters as usual; that the moment he heard of it he had applied warmly to have every impediment to their correspondence removed; and that care would be taken that they should have their letters as they had hitherto done.

We regret we have not space for the numerous instances of St. Vincent's intrepidity and firmness in restoring order in the disaffected ships of his fleet during the mutiny, when, in the words of his biographer—"was seen how one man in dignified self-possession, and in calm reliance on his own superiority of nerve and intellect, could enforce the law and discipline throughout a powerful fleet, and maintain undiminished terror over a far more powerful enemy."

One case is, however, too remarkable, and the circumstances attending it too full of excitement, to be omitted. A mutineer of the *Marlborough* having been condemned, the Admiral ordered him to be pulled up to the yard-arm by the crew of that ship, instead, as was usual, of a man being sent from each ship for the purpose. The captain of the *Marlborough*, fearing that his men would not only refuse to obey the order, but prevent the criminal from being executed on board their ship, waited upon St. Vincent, to represent his apprehensions.

"Receiving the Captain on the Ville de Paris' Quarter-deck, before the Officers and ship's company, hearkening in breathless silence to what passed, and standing with his hat in his hand over his head, as was his Lordship's invariable custom during the whole time that any person, whatever were his rank, even a common seaman, addressed him on service, Lord St. Vincent listened very attentively till the Captain ceased to speak; and then, after a pause, replied, 'What do you mean to tell me, Captain Ellison, that you can not *command* His Majesty's ship the Marlborough? for if that is the case, Sir, I will immediately send on board an Officer who can.' The Captain then requested that, at all events, the boats crews from the rest of the fleet might, as always had been customary in the service on executions, attend at this also, to haul the man up, for he really did not expect the Marlborough's would do it.' Lord St. Vincent sternly answered: 'Captain Ellison,—you are an old Officer, Sir,—have served long—suffered severely in the service, and have lost an arm in action,—and I should be very sorry that any advantage should be now taken of your advanced years. That man *shall be* hanged—at eight o'clock to-morrow morning—*and by his own ship's company*—for not a hand from any other ship in the fleet shall touch the rope. You will now return on board, Sir; and, lest you should not prove able to command your ship, an Officer will be at hand to you who can.' Without another word Captain Ellison instantly retired. After he had reached his ship, he received orders to cause her guns to be housed and secured, and that at daybreak in the morning her ports should be lowered. A general order then issued to the fleet for all launches to rendezvous under the Prince at seven o'clock the following morning, armed with carronades and twelve rounds of ammunition for service; each launch to be commanded by a lieutenant, having an expert and trusty gunners'-mate and four quarter-gunners, exclusive of the launch's crew: the

Digitized by Google

whole to be under the command of Captain Campbell, of the Blenheim. The written orders to the Captain will appear in their place. On presenting them, Lord St. Vincent said, 'he was to attend the execution, and if any symptoms of mutiny appeared in the Marlborough, any attempt to open her ports, or any resistance to the hanging of the prisoner, he was to proceed close touching the ship, and to fire into her, and to continue his fire until all mutiny or resistance should cease; and that, should it become absolutely necessary, he should even sink the ship in face of the fleet. Accordingly, at seven the next morning, all the launches, thus armed, proceeded from the Prince to the Blenheim, and thence, Captain Campbell having assumed the command, to the Marlborough. Having lain on his oars a short time alongside, the Captain then formed his force in a line athwart her bows, or rather less than pistol-shot distance off, and then he ordered the tompions to be taken out of the carronades, and to load. At half-past seven, the hands throughout the fleet having been turned up to witness punishment, the eyes of all bent upon a powerfully armed boat as it quitted the flag-ship; every one knowing that there went the Provost-marshal, conducting his prisoner to the Marlborough for execution. The crisis was come: now was to be seen whether the Marlborough's crew would hang one of their own men. The ship being in the centre between the two lines of the fleet, the boat was soon alongside, and the man was speedily placed on the cathead and haltered. A few awful minutes of universal silence followed, which was at last broken by the Watch-bells of the fleet striking eight o'clock. Instantly the flag-ship's gun fired, and at the sound the man was lifted well off; but then, and visibly to all, he dropped back again! and the sensation throughout the fleet was intense. For, at this dreadful moment, when the eyes of every man in every ship were straining upon this execution, as the decisive struggle between authority and mutiny, as if it were destined that the whole fleet should see the hesitating unwillingness of the Marlborough's crew to hang their rebel, and the efficacy of the means taken to enforce obedience, by an accident on board the ship the men at the yard-rope unintentionally let it slip, and the turn of the balance seemed calamitously lost; but then they hauled him up to the yard-arm with a run,—the law was satisfied, and, said Lord St. Vincent at the moment, perhaps one of the greatest of his life, 'Discipline is preserved, Sir!'"

His anxious care for the health and comfort of his sailors was shown on every occasion. The supply of tobacco—that panacea of all "the ills" a seaman's "flesh is heir to"—having failed, he ordered the pursers to purchase it at any price, and undertook to indemnify them out of his own purse. The Admiral incurred obloquy for causing some mutineers to be executed on a Sunday,—an immediate example being of the highest importance—but the Admiralty signified their high approbation of the measure; and the following letters show the opinions which St. Vincent and Nelson held on the subject:—

"*To Earl Spencer.*

"My Lord,—The Court-martial on the mutineers of the St. George did not finish before sunset yesterday, *or they would have been executed last night.* The most daring and profligate of them confessed to the clergyman who attended him, that the plan had been in contemplation six months, in concert with the Britannia, Captain, Diadem, and Egmont; the latter is so highly disciplined and commanded that it would not have succeeded there. Had continued in the Britannia, her myrmidons would have gone the whole length. All the prisoners disavowed any correspondence with the ships in England. I hope I shall not be censured by the bench of Bishops, as I have been by Vice-Admiral for profaning the Sabbath: the criminals asked five days to prepare, in which they would have hatched five hundred treasons; besides that we are provoking the Spanish fleet to come out by every means in our power; and seven-and-twenty gun and mortar boats did actually advance, dastardly enough it must be confessed, and cannonaded the advanced squadron, now composed of ten sail-of-the-line, on seeing twenty barges and pinnaces go to attend the execution of the sentence. I have the honor to be, &c. St. Vincent."

"*From Rear-Admiral Nelson.*

"My dear Sir,—In the first place, I congratulate you on the finish, as it ought, of the St. George's business, and I (if I may be permitted to say so) very much approve of its being so speedily carried into execution, even although it is *Sunday.* The particular situation of the service requires extraordinary measures. I hope this will end all the disorders in our fleet; had there been the same determined spirit at home, I do not believe it would have been half so bad, not but that I think Lord Howe's sending back the first petition was wrong. Yours most affectionately and gratefully, Horatio Nelson."

"*Rear-Admiral Nelson to Sir Robert Calder.*

"My dear Sir,—I am sorry that you should have to differ with but had it been Christmas Day instead of Sunday I would have executed them. We know not what might have been hatched by a Sunday's grog: *now* your discipline is safe. I talked to our people, and, I hope, with good effect: indeed, they seem a very quiet set. Ever your most faithful, "Horatio Nelson."

In April, 1798, the government determined to send a detachment from St. Vincent's fleet into the Mediterranean, under the command of Nelson, the consequence of which was the battle of the Nile in August following. The selection of Nelson, then a young Rear-Admiral, for that service, though highly approved of by St. Vincent, was, in fact, the act of the Admiralty; but it naturally gave great umbrage to the senior Flag officers, and especially to Sir John Orde, between whom and St. Vincent a very angry correspondence ensued, which led to Orde being sent home. He printed the correspondence, but Mr. Tucker takes comparatively little notice of the affair, perhaps because the Admiralty censured the Earl for sending Orde to England, and hinted its displeasure at his deportment to his Admirals. St. Vincent's letters on that occasion were, if our recollection be accurate, fully as deserving of a place in this memoir as any that occur. A passage in one of them has for many years been fixed in our memory:—"I am, Sir, a disciple of Don Juan de Langara, and fully subscribe to his opinion, that the whole principle of discipline is comprised in the word '*Obedience,*'"—a precept as sound as it is important to officers of both services, and indeed to tyros and subordinates of every description. The reprimand with which the Admiralty visited Lord St. Vincent exhibits him in a new point of view, and renders it desirable to show how he, who had so frequently censured others, himself bore such an infliction.

"*To Evan Nepean, Esq.*

"Le Souverain, Gibraltar, 5th December, 1798.

"Sir,—I submit to the rebuke the Lords Commissioners of the Admiralty have thought fit to convey to me for sending Rear-Admiral Sir John Orde to England without their Lordships' authority to do so; but my pride of character is very much wounded by the censure contained in the latter part of your letter of the 13th October, denying positively, as I do, having ever treated him, or any other Officer under my command improperly, even when there were meetings and combinations to resist the regulations I found it absolutely necessary to make, to preserve his Majesty's fleet, under my command, from the disgrace which it has suffered in other regions; and I am bold to affirm, that nothing short of the measures I have taken could have succeeded; I therefore desire you will state to their Lordships the extreme injury my reputation suffers by a sentence passed upon me without being heard in my defence. I am, Sir, your most obedient humble servant, "St. Vincent."

The way in which the Earl himself signified his displeasure, to officers who fell under his censure, was by no means equivocal.

"*To Captain*

"H.M.S. Ville de Paris, off Cadiz, 24th August, 1797.

"Sir,—The very disorderly state of His Majesty's ship under your command, obliges me to require that neither yourself nor any of your Officers are to go on shore on what is called pleasure.

"I am, Sir, &c. "St. Vincent."

There was nothing that excited his ire more strongly than apologies or excuses from officers, instead, like himself and his favourite, the late Admiral Sir Thomas Troubridge, of their finding remedies in their own resources. Of that distinguished person he once said he believed "if the bottom of Troubridge's ship were to fall off, he would still find means to make her swim." To a Captain, who complained that he had not men enough, he wrote:—

"I should have had a better opinion of you if you had not sent me a crying letter upon General O'Hara having withdrawn the detachment of the 18th Regiment from His Majesty's ship under your command. There are men enough to be got at Gibraltar, and you and your Officers would be much better employed in picking them up, than lying upon your backs, and roaring like bull calves. Why you did not impress the men out of the privateers while in quarantine, I cannot conceive. I wish all of you to be in quarantine during the war."

We have so nearly exhausted our limits, that it is impossible this week to follow Earl St. Vincent to the close of his brilliant career.

A Diary—[*Ein Tagebuch, &c.*]. By Frederika Bremer. (German edition.) Hamburgh, Kittler; London, Nutt.

The notes of a lady "of a certain age," rich, single, and meaning to remain so, on returning, after ten years' absence, to her widowed stepmother, a person of condition in Stockholm, and to a younger sister, just bursting into flower, with a dazzling cousin at her side of the same age, a beauty, too, but a spoilt one, amidst uncles, aunts, and other extraneous connexions in abundance;—the loves and anxieties of the two fair cousins, and their suspense between various admirers—some that should be and are not, others that are and should not be; with much misunderstanding and playing at cross purposes, nearly growing tragical; but all, even to the conquest of the resolute Diarist herself, arranged at last with tolerable comfort, within some six months' space—such are the materials of the novel which Miss Bremer has just given to the world in the form of a Diary. In this little history of a half year, there is very pleasant reading, and we make acquaintance in its progress, with sundry agreeable people, whom one may fancy at times we have met with before. The scene being laid in a capital, however, and the actors belonging to the upper class, there is less scope, in this, than in former pieces by the same hand, for displays of the peculiarly national character which first delighted us by their novelty and freshness. Towns and fashionable people are in essentials the same everywhere; and here the local yields to the general interest. But the simple minuteness that familiarizes the reader with every person and object described, is as active in Stockholm, perhaps, as in the vales of Norway, although less striking in its effect upon readers at a distance; and here we still find the wonted tone of healthy, generous feeling, which is so engaging in the author's favourites, and in the author herself. The characters of the women are nicely varied and well drawn, always excepting the passionate, unaccountable cousin's, which is forced, and melodramatic. Male figures are the weak points of a lady's novel, as well as of a wax-work gallery; the men in the Diary, if not very notable, say very good things, on the whole, and at least afford abundant contrasts: of these, the principal are, Freiherr Lennartson, a kind of guardian, not so tedious as faultless heroes usually are; a sardonic Envoy, De l'Orme, the evil genius of the circle, whose doings and discomfiture are in a vein which is not Miss Bremer's best, and a fervent sea

Digitized by Google

captain, a widower bold, whose manly wooing, in spite of "six small children," overcomes the heart and resolution of the Diarist. This amiable Fräulein Sophie, evidently charming,—although, like Balzac's *femme*, she is full thirty,—is the most living person in the book; a very woman, warm-hearted, and sincere, with a touch of Finnish obstinacy, which rather enhances her good qualities—the developement of her own heart while she is affectionately watching her sister's and wondering at her cousin's and civilly warring with the elegant politic stepmother—her resistance, her surprise, and final overthrow into a declared passion, are pleasantly displayed, and in a skilful, quiet, manner. Selma, the young sister, is a sweet, joyous creature, but not noticeable in other respects. There is more life-likeness in many of the secondary personages, each of whom has a stamp of individuality, and looks comfortably common-place and real, whereas the doings and sayings of the principal parties are now and then too much in the tone of romance. Of story there is little, but the entanglement which the Diarist plunges into, is so managed as to keep up uncertainty and interest pretty well to the end; when the poor butterfly cousin, whom we think hardly used, unties the knot, at the cost of cutting herself to the heart; and leaves the worthies to coalesce in the happiest combinations, the defeated Envoy having previously been despatched to the Golden Horn instead of a warmer place.

For extracts, a diary is nearly as unfavourable as a correspondence; it is all but impossible to take from the context any piece, without spoiling it: so much depends on the gradual sequence and connexion, as to the previous events and touches, which are all lost to the reader of fragments. By these no book in such a form should be judged; we shall, however, try to find one or two, which do not require much explanation, and may stand by themselves.

The following picture of the Public Assembly held every New Year's Day in the Exchange at Stockholm, is obviously taken from the life:—

When we entered the vast, splendidly lighted hall (we arrived rather late there), the whole upper, or aristocratic, part of the room, was already occupied. My stepmother, notwithstanding, made us steer thitherward, and said, in an encouraging tone, "O! we are sure of finding room." But the noble and honourable madams sate in their places like rocks, and at Selma's urgent entreaties whispered in her ear, mamma renounced any attempt to disturb the ladies. With all dignity, therefore, describing a semi-circle, we retreated, with courteous reverences, to the lower regions of the hall, where we found room by the door. Just then Graf Gyllenlof's brilliant group, accompanied by the Silovling family, marched in. As they stopped for an instant at the entrance, to survey the hall at large, my stepmother rose to speak with the Gräfinn, but the lady turned away with a brief and frigid salutation, and then swept past us with her glittering train, in which no one took the least notice of us. My stepmother sat down evidently confused and nettled. Selma was vexed, too, for her sake, and said pettishly, "What geese they are!" * * We remained almost forsaken amongst people who were almost strangers to us. My stepmother looked a picture of mortification, and I felt myself quite oppressed by the chagrin of our party. But my young sister took courage at last, and began to introduce me to those who had already arrived, and those who were arriving, in her own lively way. This gradually cheered up my stepmother, whom I encouraged to display in turn her profound knowledge of men and things. Meanwhile, we fell into conversation with a very charming young girl, who seemed peculiarly eager to gain some knowledge of the grand world around her, which she now saw for the first time. This engaging young person amused us with her sprightliness and the innocent unreserve in which she imparted to us her great fear that she might not get a single dance this evening, as she had hardly an acquaintance here, and besides this, was so strange to the world, and so shy. Nevertheless, she would console herself, could she only get a sight of the royal party; but some one had just told her that they were not likely to appear at this ball. And she had promised her little sister that she would wake her when she came back, and tell her all about the princess and the young princes. Her dread was soon changed into the liveliest joy, when the royal chamberlain appeared, and every one in the hall rose to greet the Queen,* who now entered with the crown prince, the crown princess, and the two oldest princes, Carl and Gustav, attended by a brilliant company, and, saluting the company graciously, moved across the room to their places on the dais, at the upper end. Now we were glad, Selma and I, to be at the door, as from this point we had so good a view of the royal party. Selma's new little friend was quite enchanted, and immediately bestowed her heart on Prince Gustav: while Selma jestingly said, Prince Carl was the one she had chosen for the master of her heart. Hardly were the royals seated, when the Gyllenlof group fell into conversation with the suite. Young Silovling paid violent court to the maids of honour. The country dance (*Anglaise*) began to form slowly at the upper end of the room. The royal chamberlain had arrived, and distributed gracious invitations to dance on behalf of the august guests. In a short time we saw the Princess Royal, all full of majesty and radiance, begin the dance with the Baker N——, a little dumpy old man, whose good-humoured complaisant manner, however, showed how easily a genuine strain of character dissolves the barrier between different ranks, even from the highest to the lowest. The Prince Royal danced with a young woman of the citizen class, and Prince Carl with our new little friend, who was so much afraid of not dancing at all this evening; and now, led out by the polite young prince, beamed all over with the charm of youth and innocent beautiful delight. She was pointed out to us as the eldest daughter of M—— the wholesale dealer. Methought I could see her guessing, "What will my sisters say to this?" * * The ball was a fine one, the company, as I thought, pretty nearly like what I was accustomed to see it some dozen years ago; old acquaintances, too, looked much the same as usual. Time only had passed with a light foot over the faces of most, and printed some furrows there. Many pleasant countenances amongst the youth of both sexes. People maintain that the hideous and the sickly are daily vanishing more and more from the world. Heaven speed them faster! * * But my looks were principally fixed on the Princess Royal. I well remembered how, twenty years before, I had seen her enter Stockholm in state as a bride—how she sat in the gilded carriage with transparent glasses—her delicate person robed in silver crape, a crown of jewels on her head, with rose red cheeks and heaven-blue, beaming eyes, saluting the people, that filled the streets and windows, pressed around the carriage, and hailed in her, with incessant loud *hurras* the fair young hope of the nation. She was the sun of all eyes, and Heaven's own sun shone gloriously upon her. Doubtless, in this general homage of affection, in this triumphal entry into the land, into the hearts of the people, the heart of the young princess must have beat high. Life has not many such brilliant moments. The Lady Luna told me that the princely bride, when the procession through the town was over, and she arrived at the palace, and the carriage rattled thundering under the lofty dim archway, suddenly bowed her head, and that tears were in her eyes when she raised it again—in silent devotion she had entered her future residence. I thought on all this as the royal array gradually approached us. I thought how every hope, which the young princess had excited, was fulfilled, how from that moment her life had flowed on, how in silent greatness she had wrought her task, as spouse and mother, as protector of high morals, as the helper of the poor and distressed, and how she stood there now an honour to her religion, to the land which bore her, and to the people which now call her theirs; and I loved and honoured her in the depth of my heart! I fancied that I could perceive in her large expressive eyes how weary she was of the empty formalities which she was bound to hear and to answer; and it seemed absurd to me, that out of mere courtliness, not one cordial word must fall on her ear in all this evening; for which reason I let my heart have its way, and rise to my lips quite audaciously with a "God bless your Highness!" The great eyes looked at me with some amazement, which, however, took an expression of friendliness, as she greeted me courteously and passed on.

* The King has for several years ceased to appear at any public entertainment.

This to us sounds very genial and pleasant.

A painful truth, which many will appreciate, is displayed in the history of a "family" dinner party. In Stockholm, it seems, *pour surcroît de malheur*, that these afflictions begin earlier in the day than with us:—

The dinner—why, while it is going on, life may be endured, even with forty in company. Good feeding is good society itself, and puts all in good humour. * * Instantly after dinner you have coffee, which is enlivening, too; but after this comes a hard passage, from the coffee, namely, to tea time. One is heavy with food, heavy with heat, heavy with the company of thirty heavy persons, heavy with the responsibility of entertaining them. Selma bestirred herself with the heartiest attention and friendliness, moving from one person to another, with a word now to this person, now to that; and endeavoured to talk the people into something like companionship; and wherever she turned, her gracious manner never failed to kindle a little spark of life, but it went out again as soon as she was gone:—it would not do—but kept growing ever stiller, duller, more sultry, and I remembered a witty Countess's description of a *soirée* in our highest *haute volée*. "We were like fish in a reservoir, which swim slowly because it is so close, and steer round each other, and only now and then touch each other with the points of their fins. It was now something past six. My stepmother sate on the sofa, swallowing her yawns with courteous gestures; but her countenance became more distressed at every moment, and her eyes sought Selma's, plainly saying: "what *shall* we do to entertain them?" Selma came to me and whispered, "It is frightful just now! a moment since, in my desperation, I related some little piece of scandal to Aunt Pendelfeld, but she received it with such a 'Heaven forbid,' kind of look, that I fairly took to flight. We must execute some revolution to enliven us. Poor mamma looks as if she were about to give up the contest. Have you no suggestion?"

This is desolate enough, and too real, alas! for jesting. No less true to nature is a scene in which some notable gossips call to spread their news, and learn more, if possible, at a critical moment:—

However, yesterday afternoon these birds of ill omen came and alighted at my stepmother's. I was at home; and, as I was sitting painting at the time, there was no escaping from the havoc which the three ladies made amongst our acquaintances, both near and remote. They had already gone through a long list of "It is said," "they affirm," "we believe," when Frau P—— eagerly exclaimed, "La! one piece of news, however, is certain and true. What think you of our worthy Oberst Brenner having got himself a refusal last week from rich widow Z.? I know it from her own sister-in-law, who told me the whole history. She herself, indeed, may possibly have had no great dislike to the man personally: but the five step-children must have deterred her from the match." "Aye, poor man," said the Fräulein, "with such a lot of children he will find it no easy task to get a wife, one, at least, that has any money." "Is Oberst Brenner, then, under the necessity of thinking so much about money in choosing a wife?" I asked, in no enviable state of feeling. "Of course, every man must be, with five children to provide for, and no other property but his pay," answered Frau P——. "Brenner's wife had nothing, and he, although a man of distinction, has hardly been much of an economist." "Is Frau Z—— an amiable person?" I again inquired, and the Fräulein answered, "O she is a nice person enough, but she has not over much of either head or heart; however, with a fine skin, a good figure, and a handsome freehold, neither head nor heart are requisite to make one ravishing. Rather vain, rather mad for marriage, she may be....what a sadly unfortunate thing is this propensity to be married at all hazards. I say, with

Digitized by Google

Madame de Sévigné, I would rather drown." "So would I," said I. "But is it certainly known that Oberst Brenner proposed last week to Frau Z——?" "Quite certain, my sweetest friend! her own sister-in-law told me. Besides, there are documents extant—for the affair was managed by letter:—letters that must be very affecting, no doubt, for Frau Z—— has been weeping over them for days and nights together; a special wash of pocket-handkerchiefs, indeed, became indispensable, solely and singly on account of this business. But she took her resolution, nevertheless, and will now soon be consoled, no doubt, and think of a certain gentleman who has no children. *Apropos*, it *is* said also abroad, that Oberst Brenner, too, is seeking for consolation, and will look for it *here*, in this very house: it is even asserted that Fräulein Sophie will know more of the matter." Blushing like a culprit, and proud as innocence, I denied the accusation, and declared that I knew absolutely nothing of the matter.

Of such matter as the preceding, true to the daily aspect of ordinary life on the whole, but not in itself peculiarly new or striking, is the Diary mainly composed. Here and there we fall in with an observation happily expressed, and penetrating deeper than the surface:—

Alas! people say life is standing still when no external events excite and move it. But it is not so. To me it seems, that in such tranquil periods the Angels in Heaven listen the most attentively to the life on earth; for then the chords are trembling in its inmost centre; then its finest fibres are expanding themselves; then is that something in progress which is to add to the influence of Heaven or of Hell.

In the moment in which the butterfly is developing its wings, it remains quite quiet in the secure retreat which it has sought out. In the hours of transformation its life seems to be altogether an internal one. But the brilliant day-butterfly, and the night-loving death's-head, are both children of the same silent hours of summer.

This is beautiful and true, and if ever said before, has never been better said. With this we shall take leave of a work, slighter, perhaps, than some of the author's best, but likely to please those who have taken pleasure in the others. But for a few descriptions of scenery and weather, with here and there a hint at some strange custom, we should almost have forgotten that the story is laid on the shores of the Baltic, which was to us a disappointment. This is, however, in part relieved by something that breathes over the book a tone of the North,—of feelings born as it were in a bracing climate—"frosty but kindly."

George Selwyn and his Contemporaries, &c. Vols. III. and IV.

[Second Notice.]

In expressing our judgment last week that these letters contained little that was either curious or valuable, we, perhaps too hastily, overlooked one figure they exhibit belonging to a class now, fortunately, as extinct as the Mohock or the Macaroni of the last century. This is George Selwyn's clerical correspondent, the Rev. Dr. Warner, parcel epicure, parcel toad-eater; so tolerant, that he cares no more for church than conventicle; so liberal in the expedients whereby he would minister pleasures to his aristocratic patrons, that one scheme of his for assuring the possession of "Mie Mie" to Selwyn may be read as jest or earnest, according to the credulity of the reader; it being none other than to obtain a dispensation from the Pope for witty George to marry the little girl, and thus place her beyond the control of the Fagnianis! We can hardly give a fairer specimen of this easy-going divine, than the following letter, which begins the second volume, and initiates us into his mode of treating his own family affairs:—

"I think, sir, your affairs are in as fine train as they can be. As to the thing, which is really, nay serious in its nature, your *opus magnum*, happily there is no room for the shadow of a doubt. You have hit me off exactly,—*in angulo cum libello*,—and as it is not very likely that I shall ever 'set my foot in a wide place,' as the Psalmist saith, and with the number of pensioners I am crowded with, it is pretty lucky that I *can* while away time, not discontentedly, with a book in a corner. I'll assure you I will never want money to keep it warm,—at least with tobacco. But, sir, I have just had a piece of good luck here. This poor girl of a sister that I have here was not in a way either to her mind or mine, and I was afraid of having her again entirely upon my hands, from which, indeed, she has never been entirely off. The best thing in the world were to marry her to some little *marchand*,—the honestest I could find,—and I was determined to give her a portion of *deux mille écus*:—a young lady, you see, of great beauty and fortune, for whom we wanted a man, and the Abbé Raynal had promised to look out for one for me. But, behold, she has found a *parti* for herself; a *parti* with whom she says she shall be very happy; and as she is sure I wish her happy she should not have made so heavy a fuss as she did about making me acquainted with it, and fearing my anger, and I do not know what; especially as she is going to be married to heaven. All the portion she asks is only my picture on a snuff-box. I suppose I must make a little addition, and put something *in* the box, as I do not know whether they have agreed to find her in snuff and pin-money. You will suppose that the dialogue between the Protestant Divine and his newly-converted sister was curious. When one knows so many good people of her religion, how could one be angry? She was lately at confession, it seems, at St. Eustache, when I passed through the church, and was in terrors lest I should discover her. *Pauvre fille!* My grief upon the occasion was sooner got the better of than my bad cold; and her sisters and nephews will not, I apprehend, be quite inconsolable when they learn that she can inherit nothing of the *petit paquet* that is to be divided amongst them when I tip off the perch. I wish the thing were done, for fear of accidents, though perhaps it were better done at any time than when I am in Paris, lest it should ever come to be known where it ought not; but to slight such an opportunity, would it not be irreligious? The good man I am so much obliged to, who has taken the pains to convert her, and find her this place, where she is to be made a nun for nothing, is gone to Amiens to be made a *chanoine*; I wish he were made a bishop. He is to return at the Purification, on the 2nd of February, soon after which the holy knot is to be tied. I may one of these days, perhaps, have the pleasure of bringing her to dine with you in her habit. You see, sir, she is provided for for life; and, faith, according to her account, not uncomfortably. At this place they are not prevented from going out; there are no austerities; and, above all, none of those infernal midnight watchings, usually attached to the celestial life. If you take this in your pocket to the House of Lords, you will be pleased to drop it, having first subscribed it with my name, upon the Bishop's bench. But if you do not do that, I wish you not to drop it anywhere, either by deed or word, as I believe it will be best to keep it as snug as we can, and enjoy the luck in silence."

And here is this Reverend Doctor among his brethren of "the cloth":—

"But why should I tell her I would be here on Friday evening? Why? because I know it is a trick of my old friends the neighbouring parsons, to hold a convocation on Saturdays,—as we shall do to-morrow,—and then for whist, backgammon, and tobacco, till we can't see, hear, or speak! By this trick of their's hangs a tolerable tale. Roger the servant of one of them, who is not remarkable for the happiest enunciation, asked Humphrey, the servant of another, what the deuce could be the meaning that their masters met so on *Saturdays*, of all days? 'Why! what do'st think, fool,' cried Numps, archly, 'but to change sarmunts among one another?'—'Neay, then,' said Roger, 'I'm zure as how they uses my measter very badly, for he always has the worst.'"

We rejoice to say, for the honour of the country, that such a "convocation" as is here described could not, we firmly believe, be assembled now in any part of England: a change has passed over cassock, as well as over "cloth of frieze and cloth of gold." The next letter but one, written in a sort of bottle-gaiety (why not *pot-spirits*, as well as pot-valiancy?), exhibits the Doctor—if we can make out its allusions—in still less worshipful company. By the way, it is one of the conjunctions which must surprise the gravest moralist into a smile, to find almost the very next extract a passage from the letters of that lover of bishops and serious divines, Hannah More, introduced by Mr. Jesse—*apropos* of the funeral of David Garrick—to give salt to these savourless pages: "Holy Hannah" and Dr. Warner!—a Saint and a Satyr could not go more awkwardly in harness together!

The letters by female hands which we find in the second volume, restore us to a tone of better taste, at least. The Dowager Countess of Carlisle was travelling abroad, and after the fashion of the Pomfrets and Montagus, wrote home her remarks and discoveries, though, unlike the writings of her sister Peeresses, they only now see the light. Every one must recollect Horace Walpole's terrible portraits of *Statira* (Lady Orford). The following will not destroy the impression, but may be received in mitigation. The Russian Princess alluded to in the subsequent passage, may have been the Princess Daschkaw. Lady Carlisle dates from Aix:—

"Lady Orford is here, and I see her sometimes. She is very well-bred, and has too much sense to be *exigeante*. She has a very uncommon understanding; and, as the ladies here do not pique themselves on improving or polishing themselves, it is very pleasant now and then to meet with somebody who can converse. Alienated from England by events which would never suffer her to live in it with comfort, and well received abroad, her enthusiasm for Italy is scarcely to be wondered at. We have also here the Russian Princess, who brought me letters from England. She is very gracious to me, but seems to have so strong a prejudice against the natives of this kingdom, that she lives very little in society. She speaks the best French I almost ever heard, and is prodigiously sensible. One often forms ideas which have no real resemblance; and yet I am never in her society but I imagine I see Christina. She is very learned, very determined, and seems to despise all the delicacies of her sex. After thus describing two particular persons of our society, you will be apt to form an idea from them of the whole."

Miss Mary Townsend and the Countess of Upper Ossory do their part in vindicating the grace and skill of "the sex" in correspondence. The latter gossips smartly about old Q., Charles Fox, the Duchess of Leinster, and Mr. Ogilvie, denouncing the latter roundly, as an Irish fortune-hunter, and "a vulgar." That character, too, we may observe, is now become as obsolete as the Warner species of parson: but how great was the contempt his doings then excited in high places, will be seen by those who turn to the comments and lampoons vented against the Duchess of Manchester for making a similar match with Mr. Hussey. We cannot part from this bevy of writers without giving Lady Carlisle's miniature of the charms of London for one of her class, in apology for her predilection for foreign wanderings:—

"You say there are fewer resources in the *villes de Provence* than there are in England. I am very sorry to be obliged to say, that there are none in your capital for my sex; at least, for those who, like myself, are no longer young, are not rich, hate deep play and detraction, and who have too much sensibility not to feel the solitude they are exposed to without these talents. Men are never old in the eyes of the world, who are polite and have spirit and wit enough to keep ridicule and impertinence at a distance; I do not wonder, therefore, that you should have no wish to quit connections, of whom the most part esteem, and some few fear you."

Times have mended for our women of family and fashion, as regards the "deep play"—how far in the article of "detraction," let better quali-

Digitized by Google

fied witnesses than ourselves determine. As, by accident, we have fallen on illustrations of social progress, we will return, for a moment, to Dr. Warner, for one more of his coarse Dutch pictures:—

"Leaving the Warwickshire lads, and getting amongst the Leicestershire bean-bellies, at a place called Thrammaston; and having, in my first stage from Gloucestershire, visited the lords of fat E'sham, we proceed for Lincoln-fen, and I verily think we shall do it to our time, and that my patience will be rewarded. It is fit, indeed, that it should have a reward to encourage it, as it is a virtue so very liable to be the worse for wear. I have so nursed, and coaxed, and patted, and fed Bay-Spavin, by getting off to walk when it was not very hot, (when I looked so like a tinker leading his ass with his budgets, that it almost provoked a laugh,) that he is in better order to finish his journey than he was to begin it. It was impossible, indeed, that better care could be taken of him than the coachman took, but we both mend as we go on, and I grow lighter for him, as I feed myself in a direct contrary ratio on two accounts; first, because it is right, and secondly, because I am on board wages. There was no sleeping at Leicester, for it is *Reace*-time, as the bumpkins call it, and I must have lain with the ostler, or, what was worse, with a new Scotch recruit. So we crawled on hither, a village just beyond it; and though it was the third day, and a longer journey, it was better than the two preceding. The fourth day I expect to be a day of still less suffering, and to-morrow is to be a day of joy. Christian perseverance!—did you ever read the Pilgrim's Progress?—it is mine! No! I can bear anything but such a mob as there is at Leicester. How I hate it! Is not this human breath, in great quantities, an odious thing; and has not the eloquent mad misanthrope reason, when he says, as I think he does in his Emile,—*L'haleine de l'homme est mortelle à ses semblables: cela n'est pas moins vrai au propre qu'au figuré?* And, if one were out of reach of their breath, to see their country squires, God help them! with their triple bands and triple buckles, to keep in their no-brain; (I was sorry to observe my friend Colonel Guise's hat had this post-boy ornament) and the clod-pated yeoman's son in his Sunday clothes; his drab coat and red waistcoat, tight leather breeches, and light grey worsted stockings, with one strap of his shoe coming out from under the buckle upon his foot; his lank hair, and silk handkerchief, new for *Reace*-time, about his neck; affecting, with all manner of profligacy, a vitiated palate, in calling for porter in preference to ale, because it has the air of a London blade; and depriving of all grace, and rendering odious a well-fancied oath from the mint of the metropolis, by his vile provincial pronunciation,—oh! better is the corner of an house-top, than an habitation amongst such tents of Kedar. But this is not the worst, as it is only John Bull, though in a bad point of view. The wenches were all dressed like so many *filles de la rue St. Honoré*; the yeoman's son must soon have his hair *en queue*; and besides the Assembly, (to which, by the custom of the manor from time immemorial, John Bull has been wont to bring his cows and heifers, in somewhat, indeed, of a more natural form,) there is now a Vauxhall, a *Comédie*, and a *Feu d'Artifice*, and a Savoyard with a show-box, who says, or ought to say, 'Dere you see de conquête, vich de French dog could not make vid his arm.' And yet there is nothing of races; only two or three horses belonging to obscure people, and, as I can learn, not one man of fashion in the town. But it is *Reace*-time, and that is sufficient to make all the country mad and detestable; at least to me, for whom they have left no room to be amongst them. I suppose you know that there is abundance of gentry in and about Warwick, and that the Earl who has his title from it, lives in the town; that it is a pretty town, and that the road from thence to Coventry is as fine as any about London. You did not say anything about Coventry blue thread, and therefore I do not enclose you a skein, as I hope you never have the cramp, for which, you know, it is an infallible remedy, if it be nine times dipped."

We must have done with this book. The tragedy of Miss Ray and Hackman—the daring feat of Paul Jones—the Gordon Riots—in fine, all the principal public events of the day, are merely glanced at in this correspondence; though, by superfluously long annotations and extracts, Mr. Jesse takes care to make them cut an important figure in his pages. Brought within the compass of a couple of volumes, by judicious selection and omission, and properly edited, these letters might have become a standard addition to our library of *belles lettres*, as a contribution to the history of English manners: as it is, the work is tedious, voluminous, and disproportioned.

ANNUALS FOR 1844.

The Victoria Annual.

The Prism of Imagination. By the Baroness de Calabrella.

THE gift books have, this year, somewhat changed their character. "It used to be feelings, now it's furniture." What boots criticism, when Illumination lends such aid to the acrostic rhymes which make up 'The Victoria Annual'? and to the five gossamer prose sketches entitled, The Miniature, The Pen, The Ring, The Armlet, The Watch—in the Baroness de Calabrella's 'Prism'? Both rhymester and novelist must have prepared themselves for the distraction of the reader's eye and mind: and thence it was, perhaps, out of an artful purpose, that they are so harmoniously subdued in tone, in place of importuning him with startling originality, or the finished cadence of verse. For ourselves, at least while spelling out, in the 'Victoria,' initial letters "pedigreed out" by Mr. Loeven, in coronation suits of gold, azure, and vermillion, and while turning over, in the 'Prism,' minikin pages, broadly bordered by Mr. Owen Jones with happily fancied arabesques, we thought neither of story nor rhyme—until, by a long skip of the fancy, a new application of Cowley's conceited lines in his stanzas "written in juice of lemmon" occurred to us:—

Here buds an A, and there a B,
Here sprouts a V, and there a T,
And all the flourishing *Letters* stand in *Rows*.
Still, silly *Paper*, thou wilt think
That all this might as well be writ with *Ink*,
Oh no; there's sense in this, and *Mysterie*.

Emphasizing "*this*" in the last line, brings the passage to bear on these Annuals. For we must welcome them as additions to our stores of typographical luxury. The monograms and the title-pages to the several tales, in the 'Prism,' are beautiful, and in Mr. Owen Jones's best manner—but the lithographs, from drawings by Mr. Warren, are unworthy of the splendid decorations of the volume.

OUR LIBRARY TABLE.

Caleb Stukely, 3 vols.—'Caleb Stukely' is already known to the readers of *Blackwood's Magazine* as the tale which succeeded 'Ten Thousand a-Year,' in the course of monthly publication. Like that novel, it is coarse, forcible, but of a bad school. We must prove this by dwelling on the structure of the story. In the first volume, the innocent Caleb Stukely, the only child of pious and loving parents, is launched in that strange maze of ambition and temptation yclept College life (the farce of which, by the way, has been already exhausted by the author of 'Peter Priggins'), tries for honours, fails of attaining them, and, in disgust, plunges into dissipation and bad company. During his intercourse with the latter, he becomes entangled with a fellow collegian's mistress, loses ruinously at cards, borrows money of Jews, and, in place of comfort from his Dalilah, finds that he has linked himself to a mad woman,—made mad by habits of drunkenness. At a subsequent period the harrowing history of the poor victim is detailed, showing her excuse in a miserable home, and an intemperate father. Caleb extricates himself from this wretched connexion, but only to find his college hopes blasted, his father bankrupt and dying, and his mother dead. When this dismal scene is closed, he is compelled to have recourse for employment to a kinsman, who is a Birmingham manufacturer,—a brutal, vulgar, ignorant man, with seven sons to match. Neither rest, work, nor pity for poor Caleb here! The better side of human nature is, for a moment, displayed in the person of a compassionate ostler, but from him our hero soon parts company; and after a narrow escape from falling into the arms of the Socialists, stumbles from their Scylla into a worse Charybdis—for such our author paints the enthusiasm of a Dissenting congregation, and the pseudo-virtue of its minister, who is a voracious devourer of other men's substance and a worshipper of Mammon, under the guise of an angel of mercy and wisdom. This fiend succours Caleb, and trains him in the hope of making him a tool: the young man, however, escapes the snare, and is again all but ruined,—an honest-hearted upholsterer being the good genius who this time saves him. Thence he gets transferred to an Elysium, in the family of a country clergyman, who takes pupils, and with whom Caleb engages as assistant. This good man has a fair daughter. The sequel may be foreseen: the reclaimed prodigal falls in love; but knowing himself to be unworthy, takes his leave—is suffered to depart—then recalled by the indulgent father, who sees his daughter's happiness at stake. The parties are now to be married; but, betwixt cup and lip, hereditary consumption, long feared, claims its prey. The young lady dies, the youth is "left lamenting," and writes the story of his errors, to warn others from like follies,—must we add, and from Birmingham mechanics and Dissenting ministers? If so, the morality of such a tale needs no comment; if not, deprived of the merit of coherency and purpose, the story is too full of squalid and disagreeable details, to be recommended to the reader for mere amusement.

The Philosophy of Christian Morals, by S. Spalding, M.A.—The author of this work was a young man of great promise, who graduated at the London University in 1840, and died early in the present year at the Cape of Good Hope, to which place he had repaired to recruit his strength, shattered by intense application to study. The work which he has left behind, bears traces of a thinking mind, which might have done much in the field of moral science. Mr. Spalding's treatise is modelled to a great extent on the writings of that great ethical writer, Bishop Butler, for whom he professes a warm admiration, and the whole work is throughout thoughtfully and eloquently written.

Inquiry into the Means of establishing a Ship Navigation between the Mediterranean and Red Seas, by Capt. J. Vetch, R.N.—Capt. Vetch is of opinion that "a direct and perfectly controllable channel," kept clean by the mean fall from the level of the Red Sea to that of the Mediterranean, (such fall being, of course, properly economized) is practicable, but that "British capital and British energy would alone execute the work in a truly useful and permanent style."

Almanacks.—The character of 'The Sporting Almanack' is well known; we have only therefore to say, that the illustrations, though unequal, are on the whole better than usual. 'The Princes' Almanack' contains portraits of the youthful heirs to the crowns of England, France, and Belgium, with appropriate verses.

THE GUIANA EXPEDITION.

Our readers will perceive, by the report of the Geographical Society, that the Chevalier Schomburgk has returned to Georgetown, Demerara, from his exploring expedition, and that he promises further details by the next packet. In the meantime, we have received a private letter from the enterprising traveller, accompanied by copies of the *Guiana Herald*, with a full account of his wanderings, which we have great pleasure in laying before the public:—

"Mr. Schomburgk left Georgetown in February last, ascended the Essequibo, and reached Pirara on the 24th of March (see the last communication from the Chevalier Schomburgk, *ante*, p. 629), where he met the other gentlemen of the expedition, from whom, it may be recollected we stated in our account of the last expedition, Mr. Schomburgk separated—they to proceed to Pirara, to await his return—he to direct his course to Georgetown. He found the party, happily, all in good health.

"It was not till the 30th of April, that all the arrangements were completed to enable the party to leave Pirara. 'On leaving this spot,' says Mr. Schomburgk, 'it was with some feelings of regret I bade adieu to a place which I had seen rising into the most populous Indian village I ever visited, but which, at the time of my departure, was only inhabited by a single family, the houses abandoned, the whole place offering a picture of wretchedness.' However, on the 30th of April the whole party embarked, the baggage being stowed on board two large boats. It appears the travellers selected a most propitious period for their departure, for the rains had swollen the Rupununi to such a degree, that they reached an ascent in this river never before attained with large craft; to the unbounded astonishment of the Indians of that district—the Wapisianas—who declared they had never beheld such canoes. From hence the travellers had to continue their journey overland, and Mr. Schomburgk was, therefore, obliged to return the boats under the command of Mr. Fryer; while, in company with Mr. Goodall, the artist, he continued his course over the Carawaimi Mountains.

"At Watu Ticaba they sojourned for several days, having here experienced some difficulty in procuring Indians from the left bank of the Rupununi to act as carriers of the baggage and provisions. At lenth this obstacle was overcome, and on the 4th of June they continued their route; here bidding adieu to the savannahs, to enter the huge and almost impenetrable forests of the interior, which were traversed, extending over the mountain chain already mentioned, and over undulating ground, frequently interspersed with manica swamps, abounding in a species of cocoa (*Theobroma*), which the Indians were most eager to secure, as the pulpy arillus surrounding the seed has an agreeable vinous taste. Singular to say, however, they appeared perfectly ignorant of the qualities of the seed, which possess the most delightful aroma, as Mr. Schomburgk says: they evinced the greatest astonishment when they beheld him and Mr. Goodall collecting these seeds, and subsequently preparing them into a dish of chocolate, which these gentlemen declare was the most delicious they ever tasted. These indigenous cocoa trees, Mr. Schomburgk proceeds to inform us, they met with in innumerable thousands on this (5th of June) and the following day; and he adds the remark, that these inexhaustible stores of a highly-prized luxury are thus here reaped solely by the wild hog, the aguri, monkeys, and the rats of the interior.

"On the 8th of June our party reached a settlement of Taruma Indians, near the river Cuyuwini. In this neighbourhood Mr. Schomburgk had sojourned on his expedition in 1837. The site of the settlement however was changed to somewhat nearer the river. 'Many of the inhabitants whom I saw on the former occasion,' says our narrator, 'were dead, but nothing struck me more mournfully than the ravages death had committed amongst the Atorias—the immediate neighbours of the Tarumas—since my former visit; at that time the settlement consisted of 200 souls, which number was now reduced to less than thirty. The small-pox, and the measles had done their worst among these people.'

"Here it became necessary that our travellers should prepare their woodskins or bark canoes; with which, descending the Cuyuwini, they again entered the upper Essequibo on the 21st of June. Several days' journey above the point of confluence of these two rivers, they arrived at two settlements of the Taruma Indians, where they sojourned some days, in order to afford time to inform the Maopityan Indians of their intended visit. In this locality Mr. Schomburgk became acquainted with a variety of the bean tribe (the Legumimosæ of botanists) which possesses a root, or underground tuber, that grows to an enormous size, fully equal to the largest yam. These roots were not, at the time, in full perfection, but their taste was somewhat between the yam and the sweet potatoe. The Taruma Indians called them Cùyùpá. Mr. Schomburgk thought that, if it were possible to transplant these roots to the coast regions, they would be a most valuable addition to our list of native esculants. The roots are considered fit for use when the herb above ground dies. Some of the seeds Mr. Schomburgk brought with him, and he has offered a few to such of the inhabitants of Georgetown as will promise to plant, and be at some pains to rear, them.

"At the mouth of the Urana the travellers abandoned their woodskins. This river debouches into the Essequibo in about 1° 37′ N. lat. They continued their course landward, traversing a chain of hills, and on the 13th July stood at the sources of the Onororo, a tributary to the Essequibo; and, ascending an elevation of about 100 feet higher than the origin of the first river, the sources of the Caphiwuin or Apiniau, the head waters of the large river Trombetas, (which afterwards amplifies itself, opposite Phauxis or Obedos, into the Amazon,) were attained. The chain of hills here—about 2,000 feet high—consequently forms the division between the rivers which flow southward into the Amazon, and those which take their course northward and westward into the Essequibo.

"From the spot, a walk of a few miles brought our party to a Maopityan village. Here were two houses of singular construction—the larger was of unusually ample dimensions—it was in diameter 86 feet, and of a corresponding height. They were each covered in by two roofs, much in the fashion of pagodas, one roof being over the other, and between these the smoke found its outlet. The party having here received the salutations of the Indians, entered the larger edifice, 'which then encompassed,' says Mr. Schomburck, 'the remains of the once powerful tribe of Maopityans, or Mawackwas.' These people possess a very marked and distinct set of features from other tribes, and are still further distinguishable by a striking peculiarity in the arrangement of their hair. This is worn in a long queue of from ten to twelve inches in length, descending down the back, and bound round with the palm leaf, richly ornamented with strings of red cotton, and parrots' feathers.

"At this settlement our travellers learned it would be necessary for them to descend the River Caphiwuin for a certain distance, and as the Maopityans did not understand anything of river navigation, they were obliged once more to prepare woodskins. The village was nearly destitute of provisions, and the Indians were grinding rotten wood with the little cassava flour they possessed, in order to increase the quantity of bread baked from it, but which, by no means, in the opinion of our travellers, improved its quality, but rendered it bitter to the taste, and disagreeable to the sight. They had, therefore, some difficulty in procuring provisions for eight days' supply, having been informed that it would occupy that time to reach their next stage. It was only, also, at the expense of some rich presents promised, that six of the Indians could be induced to accompany the expedition; indeed, these natives altogether evinced an unfriendly disposition. The travellers then started for the territory of the Pianaghotto and Drio Indians, situated, they were informed, at the head of the Curuni, or Curuwini River, which Mr. Schomburgk suspected to be the Corentyne. This portion of the journey appears to have been particularly perilous. The river they had to descend—the Caphiwuin—abounded in falls, some from 40 to 50 feet in perpendicular height; and in a distance of 60 miles, they decended 305 feet.

"On the 29th of July, they arrived at the confluence of the Caphiwuin with the Wanamu, both of equal size, whose united streams form a river, called by the natives of those regions the Kaphu. At this time our travellers had been already eleven days from their last starting point, and had received information on the previous day, from a family of Zuramata Indians, whom they found preparing a new provision field, that they would have to ascend the Wanamu for eight days more, before they could expect to find an Indian settlement. This family were so poor, that they could not even give a plantain; and, consequently, our travellers, with a scanty stock of provisions, only originally intended for eight days' journey, were put to great straits for food, and were compelled to husband their fast-dwindling stock with the most scrupulous economy."

We must leave the exploring party on the Wanamu River, reserving the account of its return to Georgetown for next week.

FOREIGN CORRESPONDENCE.

Cairo, Nov. 16, 1843.

The excuse I offer for my late silence, of being in the Faioum on post day, is hardly valid, for I might have left a letter in Cairo, if I had acted prudently.

As to the notion of my remaining here, there is no foundation for it, not even if the Pasha were to make me his prime minister. I am truly sorry to hear of the distress and consequent political difficulties in England; but you have men at the head of affairs who have the fear of God before their eyes: here, alas! there is no such influence; consequently the rapid decline of the whole Turkish empire. What would you say of the atrocities committed by this government? How true it is, "He that ruleth over men must be just, ruling in the fear of God." To the neglect of this golden rule, no doubt, may be attributed all political discord, as also by the strict observance of it may be adjusted all grievances. In this country, and in all the empire, *Flus wa dubara*—money and intrigue—are the only things necessary to retain or obtain situations of the greatest importance; as for virtue of any description, if it exists at all, least is to be found among the governors; but last month, the Governor of Nubia, Akhmed Pasha, refused to surrender his pashalik to his master, Mohammed Ali, offering in lieu a yearly tribute. There is no reason against such conduct, I presume, to be found in the whole Koran, —certainly no such passage as the one I have quoted, —or at any rate, there is no want of precedent in the history of the Mohammedan empire—no want of example even in Mohammed Ali himself. Akhmed Pasha was governor of a rich country, producing gold, ivory, and corn, separated from Egypt by a desert, and the water passage interrupted by cataracts. He had, it is said, sent presents to Constantinople, which had procured for him a firman of independence; had amassed great riches, and got a considerable army; but, as it always happens, something was neglected—he had neglected to secure the affection of the people, who, suffering more immediately from his extortionate measures, were more disposed for Mohammed Ali, and thus he became an easy prey to the (*dubara*) intrigue of his master, who contrived to put an end, by poison, to what might otherwise have become a doubtful question. This mode of settling differences, both domestic and political, is by no means rare. The whole mass is corrupt—the whole

Digitized by Google

fabric of the Turkish empire, I am persuaded, would tumble to pieces, if it were not for the occasional props we lend—I hope only till some ingenious architect in diplomacy shall offer a plan for disposing of the ruins, and building on its site a more solid and virtuous structure. "Cade, come corpo morto cade." The word *dubara* means string, cord, twine, and is applied metaphorically to signify intrigue: the entanglement and difficulty of unravelling a skein of silk is not unknown even to our fair countrywomen. *Flus* (money) we are also acquainted with, although it is not applied with us to all the iniquitous purposes it is here.

For some time before the news of the death of Akhmed, his atrocities and disaffection were the subject of conversation. They then ceased to be the topic, but preparations of a warlike nature were carried on in the delta. At last it was reported he was coming to make his submission; others said there was no foundation for the stories that were told of him, when suddenly the news of his death arrived, the manner of which is variously described. The other day I heard that letters had been received from him of a later date than that given by the government as the time of his death. This, however, is certain, that his pashalik has been divided, and one of the governors is gone to his post.

The Pasha is gone up to Assuan in a steam vessel built in the port of Cairo (Boulak), where are three or four Arabs, who have been in England, and conduct a factory of engines.

There is a French naturalist who offers to go to the Red Sea, and collect specimens of the shell-fish and polypi of every description, when he shall have procured twenty subscribers at 1*l.* (100 piastres) per month for a year. For this sum he proposes to give to each subscriber a certain number of specimens of each shell and polypus, which is to be sent monthly to Cairo, to a committee, formed of the most respectable resident subscribers. I have seen a collection already made by him from the north end of the Red Sea, in which are most rare and curious shells. I believe the man to be honest, and that his subscribers will possess at the end of the year, for the sum of 12*l.*, a valuable series of shells and polypi, from the whole western coast and islands of that sea, from Suez to Abyssinia. Will you be so good as to make this known in England? Several persons of influence have signed the contract; and if the British Museum, or any of the Societies, would speculate in the matter, they have only to write to the Consul here, Mr. A. Walne.

To-day, the 16th, is the Mahmal. The Mahmal is a silk cover for the Caba; it is carried in procession from the citadel through the town, at about half-past seven o'clock, A.M. It then accompanies the pilgrims to Mekka, who collect this evening outside the town, at Birket al Hag. I am going to take a ride on my dromedary for an hour before dinner: good bye. Yours, &c.

ROYAL PATRONAGE AND BOUNTY TO DECAYED AUTHORS.

THE daily papers have announced that Mr. Moncrieff has received a pension through the liberality of Her Majesty. The account given is, however, incorrect and imperfect, and does so little justice to the benevolent intentions and generous kindness of Her Majesty, and the whole affair is so honourable not only to Her Majesty, but also to the Literary Fund Society, and its excellent Secretary, Mr. Blewitt, that we are quite sure it will do good service to a good cause, if we narrate the whole of the circumstances as they occurred; and Mr. Anson has consented, at the request of Mr. Blewitt, to allow the facts connected with the case to be made public.

About two months since, the Secretary of the Literary Fund Society received a letter from Mr. Anson, Equerry to His Royal Highness Prince Albert, stating that he had called upon him the day before;—"My object," said Mr. Anson, "in seeing you was to ask if in the literary world you happen to know any (I fear too many) reduced to poverty, who have not brought it upon themselves by their conduct, and whose exertions in the cause of literature might give them a claim to a charitable provision for life. The qualifications for the charity are, that he must be single, either a bachelor or widower, and above fifty years old—the advantages to the recipient are a separate apartment, with attendance and fire, meals, and some clothes, and about 26*l.* per annum. If you know any such candidates, would you give me their names, and a short sketch of their histories, without saying anything about it."

To this Mr. Blewitt replied:—

73, Great Russell Street, Oct. 18, 1843.

Dear Sir,—I am fearful that you may have supposed me neglectful of your request, in consequence of my delay in acknowledging the receipt of your note of the 13th instant. But I was desirous of giving you the best information in my power, and therefore found it necessary to refer to a great number of papers and letters, in order to collect such facts as may be useful. I now beg to inclose the result (13 names) which I have arranged in the tabular form adopted by the Literary Fund, as it appeared to me more clear and precise than any other mode I could adopt. I have added at the foot of each page such remarks as the case appeared to call for, and shall be most happy to procure any further information you may require respecting the persons I have selected.

I think I may venture to recommend all the enclosed names, as those of literary men of considerable merit, whose characters and talents have failed to shelter them from those calamities which fall so peculiarly upon authors. Many, as you will perceive, have written works of great importance and popularity, and yet as they grow old they are struggling for a mere subsistence. I remain, &c. O. BLEWITT.

In acknowledgment Mr. Anson observed:—"I am very much obliged to you for the mass of information you sent as to the distressed situation of poor literary persons. The extent of it is indeed sad! there is hardly one out of all you sent me who is not fit for the object sought, and selection will, I think, at once be made from them."

In a few days a letter was received from Mr. Anson, inclosing others to be delivered to Mr. Moncrieff and Mr. Jones, containing the gratifying information, that Her Majesty would be graciously pleased, if the appointment were worth their acceptance, to nominate each of them a "poor brother of the Charterhouse." The literary claims of these gentlemen to this honourable though humble provision, may now be referred to without indelicacy, and without violating that secrecy which forms a marking feature in the proceedings of the Literary Fund Society. The facts were necessarily communicated to Mr. Anson, and their further publication, is a justification of the Society in its selection,—and a proof of the discriminating judgment with which Her Majesty's patronage and bounty are distributed. It will be enough simply to state, that Mr. William Jones is 82 years of age, afflicted with loss of sight in one eye, and with chronic rheumatism. He is the author of—History of the Waldenses and Albigenses, 2 vols. (five editions). Biblical Cyclopædia, 2 vols. Lectures on the Apocalypse. Lectures on Ecclesiastical History, 3 vols. Primitive Christianity Illustrated. Continuation of Hume and Smollett, 4 vols. Continuation of Russell's Modern Europe, 4 vols. Christian Biography. Dictionary of Religious Opinions. Memoirs of Rev. Rowland Hill—of Rev. Edward Irving—of Dr. Adam Clarke—and of other minor works.

To the honour of Mr. Jones, we must add, that though deeply sensible of Her Majesty's goodness, and fully aware of the privations and sufferings that awaited him in the future—he, with gratitude and thanks for the intended kindness, felt compelled to decline the appointment, as it can be held only by a member of the Church of England, whereas he, though he set no exaggerated importance on mere dissent, had been a conscientious dissenter all his life.—Mr. Moncrieff's claims, though not perhaps of so high an order, are better known. He is 50 years of age, afflicted with cataract in both eyes, and other infirmities, and is the author of—A History of Leamington and Kenilworth; The Minstrel's Offering; Songs of the Gipsies; Poems; and about 200 dramatic pieces, produced at the different theatres, of which fifty have been printed and published.

In consequence of the scruples of Mr. Jones, Mr. John Davis was nominated. Mr. Davis is 72 years of age, entirely destitute, and without any other means than those supplied by private benevolence. He is the author of Travels in America in 1798-99; 'The Post Captain,' a naval novel, first published in 1802, and now in its tenth edition; and a Life of Chatterton.—The 'Post Captain' may be said to be the parent of all our nautical novels; and in regard to the work on the United States, Mr. T. B. Macaulay, in a recent letter, writes as follows: "I have long been acquainted with the very curious and lively description of the United States, which he published nearly forty years ago, and which seems to me valuable, as preserving many traits of a state of society which has passed away." The poor old man has also served his country in action; he was midshipman on board the *Artois*, Capt. Nagle, when she engaged and captured the *Revolutionnaire*, forty years ago; and the merits of the 'Post Captain' are attested by the fact, that Capt. Glasscock, in the 'Naval Sketch Book,' refers to it as an authority to decide the legitimacy of a disputed nautical phrase.

The result is best told in Mr. Anson's own words. "Her Majesty," said Mr. Anson, in his next letter, "has given poor brotherships of the Charterhouse to Mr. Davis and Mr. Moncrieff, both of whom have accepted with the deepest gratitude. It was offered in the first instance to Mr. Jones, but he was unable to accept from being a Dissenter. I trust, however, that Her Majesty may be able to give him a little temporary assistance, and it is proposed to be done as follows:—that Her Majesty should cause to be paid to you a sum of 60*l.* from the Royal Bounty, which you could pay him for three years, by annual instalments of 20*l.*"—Three years at 82 is a long lease of life, and no doubt the kindness extended to Mr. Jones will not forsake him should he survive that period. The mere filling up of these appointments is nothing: they *must* have been given to somebody; it is the careful and anxious consideration as to how these appointments might be disposed of most judiciously and beneficially; and the considerate kindness to poor, conscientious Mr. Jones, that win from us our respect and gratitude. It is very easy to talk of royal munificence; but Royalty has more demands on its liberality, in proportion to its means, than people like ourselves, of the middle class. Mr. Blewitt, in acknowledgment, expressed the pleasure it would give him to undertake the duty proposed, and to give effect to Her Majesty's benevolence, in any way that might be pointed out. In accordance with his offer, 60*l.* was forwarded to him, which he was directed to pay to Mr. Jones by annual instalments of 20*l.* We have only in conclusion to give Mr. Blewitt's reply:—

Nov. 8, 1843.

Dear Sir,—I had the pleasure of receiving your note yesterday, with one from Mr. Arbuthnot, enclosing a draft for 60*l.* for the use of Mr. Jones. I have seen Mr. Jones this day, and communicated to him Her Majesty's gracious provision for him during the next three years; and I can assure you that he feels the utmost gratitude for this special mark of Her Majesty's favour and condescension. Mr. Jones has requested me to pay the 20*l.* in two half-yearly payments of 10*l.* each, so as to extend the bounty over the whole year. In accordance with this arrangement, I have paid him this day the first half-yearly instalment of 10*l.*, and enclose his receipt for the amount. He will write to you himself to-morrow, to express his feelings of gratitude for Her Majesty's beneficence. I should add, that I have deposited the remainder of the 60*l.* in the hands of Messrs. Coutts, and that I will send you Mr. Jones's receipt for each payment as it becomes due. I remain, O. BLEWITT.

This is the way in which benevolence may work out the good which it desires to accomplish. The Committee and Secretary of the Literary Fund Society are necessarily, and by position, acquainted with the situation of those literary men who, from age and infirmity, and the casualties of a literary life, have sunk into poverty,—and by availing themselves of this established channel, the affluent and the benevolent might bestow their charity with the certainty that it would be judiciously disposed of,—and we trust they will follow the worthy example set them by Her Majesty.

OUR WEEKLY GOSSIP.

WE ought perhaps to suspend our judgment of the Nelson monument until the whole shall have been fully exposed to view, but as the statue has been allowed—rather injudiciously—to show itself prematurely, we cannot refrain from saying that Nelson cuts a somewhat ridiculous figure. As a figure, it is, indeed, sufficiently striking, and decidedly marked in outline; yet that very circumstance serves to render all *prononcé* which ought to have been subdued as much as possible. At the best, modern costume does not accommodate itself kindly to sculpture; still, as the lesser of two evils, it may properly be adapted for portrait statues of life size; but when exaggerated to colossal dimensions, it becomes ludicrous. This is certainly the case with regard to the "cocked hat," whose shape looks most grotesque in sculpture, and which provokes an ungracious comparison with a huge Brobdignaggian article of the kind affixed by way of sign over a hatter's door. Not only is this hat the

Digitized by Google

very first thing that catches the eye, but it also detains it, and impresses itself upon the spectator as the most characteristic trait in the figure. It might have been supposed that, although obliged to observe the naval costume, the sculptor would have omitted the hat, as being by no means an indispensable appendage to the dress; for even upon canvas there are more portraits of Nelson without the hat than with it. Still it was in a manner forced upon him, because it is that and the empty right sleeve of the coat which identify the individual, the lineaments of the face not being discernible in a figure elevated at such a height. As it is, we cannot help thinking that the man in a cocked hat, seen in marked outline against the sky, has a most prosaic, matter-of-fact expression. Neither is it likely that we shall be better reconciled to it after the scaffolding has been cleared away: another incongruity will then manifest itself,—a Roman monumental column surmounted by the figure of a British admiral,—the one crowned by its capital of acanthus foliage, the other by the capital cocked hat,—the last being the crowning matter of the whole affair; and although not so intended, yet unconsciously symbolical of the tendency of modern art, and its literal imitation of Nature.

Intelligence has been received of the safe arrival of Mr. Fellows and the Syrian Expedition at the mouth of the Xanthus, on the 23rd of October. The next day Mr. Fellows and Capt. Warden proceeded up the valley, and forthwith operations were commenced; the provisions were landed and forwarded on camels, and parties set to work road making, clearing, and constructing barracks. All were well on the 2nd of November.

We mentioned last week the noble generosity of the Rev. Sydney Smith, in presenting the living of Edmonton to the son of Mr. Tate. The mode of presentation, we have been assured, was as follows:—Mr. Smith called upon Mr. John Tate, with whom he was but slightly acquainted. "I have thought it right to come and tell you that I have given away the living held by your late father." Mr. Tate bowed assent, looking, of course, rather rueful, and replied—"No doubt the appointment is a very proper one." "Yes, very proper; I have given it to a most deserving person. What is an odd coincidence, too, is that his name is Tate—John Tate." Mr. Tate coloured, and his sisters burst into tears. "And there," quickly added Mr. Smith, "he sits before me."

Our readers will be happy to learn that a letter has been received from Sir Stratford Canning, our ambassador at Constantinople, which holds out good hopes that Mr. Wolff may still find the two prisoners in Bokhara alive on his arrival. Sir S. Canning says:—"I rejoice more than language can express to hear that an Englishman, named 'Stoddart,' was alive at Bokhara five or six months ago, when the individual from whom this information has been obtained left the city."

We hear, and the public will hear, with pleasure, that our pleasant friend Mr. Hood, anxious to insure to us a "happy new year," announced for the 1st of January, 'Hood's Monthly Magazine and Comic Miscellany.' "One prominent object," he says, "of the projected publication, will be the supply of harmless 'Mirth for the Million,' and light thoughts, to a public sorely oppressed—if its word be worth a rush—by hard times, heavy taxes, and those 'eating cares' which attend on the securing of food for the day, as well as a provision for the future. For the relief of such afflicted classes, the Editor, assisted by able Humourists, will dispense a series of papers and woodcuts, which it is hoped will cheer the gloom of Willow Walk, and the loneliness of Wilderness Row—sweeten the bitterness of Camomile Street and Wormwood Street—smooth the ruffled temper of Cross Street, and enable even Crooked Lane to unbend itself! In a word, it will aim at being merry and wise, instead of merry and otherwise. For the Sedate, there will be papers of a becoming gravity; and the lover of Poetry will be supplied with numbers in each Number."

It is satisfactory to find, by letters from Madrid, that the capital is not quite such a wilderness filled with wild beast as the political state of the country might lead us to infer. Madrid, indeed, is said to have been much improved within these last six years, and the people of fortune who reside there are beginning to understand the meaning of the word "comfort." Madame Calderon de la Barca (says our correspondent), authoress of 'Life in Mexico,' gives very pleasant parties; so does the Countess Montijo, a lady of Scottish extraction. There is also a good company at the Opera, and two other theatres open. Mr. Pasquale de Gayangos, well known in London by his works published by the Oriental Translation Society, and where till lately he resided, has just been appointed Professor of Arabic to the University at Madrid, lately removed from Salamanca.

Will be shortly Closed.

DIORAMA, REGENT'S PARK.

The Two Pictures, now exhibiting, represent the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. RENOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Four.—N.B. The Gloria, from Haydn's Service, No. 1, will be performed during the midnight effect of the Cathedral of Notre Dame.

ROYAL POLYTECHNIC INSTITUTION.—BRILLIANT EFFECTS are produced by ARMSTRONG'S HYDRO-ELECTRIC MACHINE at three o'clock, and at Eight in the Evenings (except Saturday Evening). By LONGBOTTOM'S OPAQUE MICROSCOPE the singular Optical Illusion of converting a Matrix into the appearance of being a Cast in bold relief, is exhibited, with a variety of other curious effects. Particulars of the CHEMICAL and PHILOSOPHICAL LECTURES, which are delivered Daily, are suspended in the Hall of Manufactures. DISSOLVING VIEWS. DIVER and DIVING BELL. Numerous STEAM ENGINE and other MODELS at work. The original CRAYON DRAWINGS of RAPHAEL'S CARTOONS, &c. &c.—Admission, One Shilling.—Schools, Half-price.

SCIENTIFIC AND LITERARY

GEOGRAPHICAL SOCIETY.—*Nov.* 27.—Mr. Murchison, President, in the chair. After the routine business of the Society, four new members were elected.—A letter was read from the Chevalier de Schomburgk, by which it appears that himself, with Mr. Goodall, the artist, and the rest of the party, had returned in safety to Demerara, on the 13th of October, from the sources of the Essequibo. Mr. Schomburgk says, "This has been one of the most interesting journeys I ever undertook; but I must leave all details till the next packet. We were unfortunately eleven days on short allowance, consisting of six ounces of farina per diem, each man; and twenty-six days' travelling elapsed before we met with any human being, but those who belonged to our party. It has had less effect upon me than upon the rest, who arrived upon the coast like walking skeletons. We are, however, now recovering, and I can say with pride and sincere satisfaction, whatever have been our dangers, not a single individual has perished in the undertaking, which has occupied us since 1841." This announcement was received with unequivocal marks of satisfaction.

The next paper read was one by Mr. Baily, of Guatemala, 'On the communication by canal between the Atlantic and Pacific Oceans.'—Mr. Baily, in his paper, drew a comparison between the advantages of the line by the Lake Nicaragua and the River San Juan, and that by the River Cruces, in the Isthmus of Panama, and gives the preference to the former; for although, he says, he found the height of the watershed between the Pacific and the Lake to be 615 feet, it was of a soil easily excavated, whereas, on the line between Chagres and Panama, there are four different streams to be improved and rendered navigable; as for the height of the *divortia aquarum* in this direction, it has not been published, if, indeed, it has been ascertained. Mr. Baily is of opinion that the lower course of the San Juan may very easily be rendered navigable for vessels, and that the rapids in its course may also be made passable. He further states, that if ever the construction of a canal here should be determined upon, provisions of all kinds, in the greatest abundance, and almost for nothing, may be obtained for any number of workmen. The secretary, after concluding Mr. Baily's paper, said, that the line by Tehuantepec and the River Coarzacoalco, about which so much has lately been written, was made known to the Geographical Society so far back as 1825, by Don Juan de Orbegozo, who had surveyed the line by order of his government, with an express view to the canal, and that the map then sent was upon the table.

The next paper was 'A Description of the country between Sydney and Moreton Bay, on the east coast of Australia,' by Captain Hamilton. That gentleman, with a friend, left Collary on the 30th of December, in search of a cattle run, and returned after nine weeks, having, in that time, ridden 1250 miles. Lightly equipped, and most sparingly furnished with provisions, the party crossed the Liverpool Plains, which took them three days, and arrived at Tamworth, on the Peel River, a little beyond which rises the table-land called New England, which, together with Beardy Plains, extends for 150 miles in a northerly direction, and having a breadth of about 30 to 50 miles. It is described as being a continuation of the dividing ridge which separates the eastern from the western waters, and is about 4,000 feet above the level of the sea. The descent from this high land is much more rapid towards the east than towards the north-west and west, on which side the land is better suited for stock than that on the east. Indeed, there is very little unoccupied land between the heads of the Western and their junction with the Darling, and even the latter river is occupied for above 300 miles of its course, though occasionally subject to drought. The country to the east is of very different character: here the rivers, after running a few miles over a comparatively level country, suddenly fall into ravines from 200 to 300 feet deep, and so perpendicular as to be quite impassable for man or beast. The heights of New England at Salisbury, about 25 miles from the Macdonald River, are of a grey-coloured granite, and coarse in the grain. From Salisbury, Captain Hamilton took a trip to see a station which lay to the west, and on the route passed a very pretty country about Yarrowitch, a station of Judge Forbes. Having reached the station, they found it was a good one, and well watered. After this, another station was visited, and the party returned to Salisbury, to explore still further. Hearing that a fine country was to be found to the eastward, the party accordingly started on the 10th of January, but soon ascertained, by personal examination, the impossibility of crossing the ravines of the Apsley, or the M'Leay, or of heading them. It appeared, moreover, that the whole of the ground in this neighbourhood was of the same character, being broken into deep ravines, with perhaps a few small tracts of good land between them, but which, from the difficulty of getting at them, are likely for a long time to remain in the hands of the blacks. Captain Hamilton was now informed that the best chance of getting to the eastward was by the north of the Snowy Mountains, so called, not from there being any snow, but by reason of the white appearance of the bare granite peaks. In that direction he accordingly went, passing by some scenery more beautiful, says the traveller, than anything he had seen in Switzerland; there was also very fine grazing ground. Having ascended the Snowy Mountains, from whence, it is said, the sea may be seen in clear weather, the party still found it impossible to advance eastward. The scrub was dense, and progress all but impracticable; they accordingly returned to Salisbury, which occupied them four days. After resting one, they again started in a northerly direction: passing successively several stations, some of which were in a beautiful country, they entered upon the Beardy Plains, some hundred feet lower than New England, and eventually reached Tenterfield, from which they struck off due east, and came down upon the Clarence River. Here the climate was very different, and everything was growing most luxuriantly. From the Clarence, still going eastward, they came upon Myrtle Creek, an affluent of the Richmond, which, at the junction, was found to be 70 or 80 yards wide, apparently deep, and the water rather brackish, though drinkable. To the north of the creek is a fine grazing country, the grass very thick, the plains well watered, and the lagoons abounding in black swans and wild ducks. In this part of their excursion they met with a camp of native women and children, who fled, and then an encampment of armed blacks, who assumed a somewhat menacing appearance, and who followed the party for some time, though at a respectful distance; at length these ceased to follow, and the party encamped for the night, keeping watch, though the natives had held up green branches in token of peaceful intentions. Finally, Captain Hamilton found the object of his search—a fine and extensive cattle run—on the western bank of the Richmond, between Dobie's and Deep Creek. The traveller expresses surprise that the Clarence should have been so long settled without anybody finding out the Richmond, particularly as there is not the slightest difficulty, and the land about the latter is far superior to that at the Clarence.

MUSIC AND THE DRAMA

SACRED CONCERTS, CROSBY HALL, BISHOPSGATE-STREET WITHIN. The Second Concert of the Series WILL TAKE PLACE on WEDNESDAY EVENING, December 13th, 1843. Programme: Full Anthem, 'Lord, for Thy tender mercies'—Messrs. Francis and Novello, 'Here shall soft Charity'—Miss Dolby, 'But the Lord is mindful'—Chorus, 'How lovely are the messengers'—Mr. Novello. 'Lord, what is man'—Aria, Miss Rainforth—Mr. Francis, 'Guardian Angels'—Full Anthem, Part of the 44th Psalm—Miss Dolby, 'Lord, unto Thee I cry'—Quartett, 'Lo! star-led Chiefs'—Miss Rainforth, 'Hark! 'tis the linnet'—Corale, Sebastian Bach—Miss Rainforth and Miss Dolby, 'O praise the Lord'—Chorus, 'We praise Thee, O God'—The Organ by Miss Mounsey. Subscription for two series Admissions to the five remaining concerts, 1*l.* Single Ticket, 2*s.* 6*d.* The other concerts will be on Wednesday, January 3, January 17, February 7, February 28, 1844. To commence at Half-past 7 o'Clock.

Society of British Musicians.—Whether from favouritism *or* carelessness, some of the most creditable efforts by young native musicians are not heard at these entertainments, while not a few works come to performance which ought not to pass beyond *trial*. The quartetts played at the Fifth *Soirée* were by Mr. Gledhill and Mr. J. Calkin; the instrumental pieces, by recognized composers, were a pianoforte Quintett by Dussek, and Spohr's pianoforte Sonata (reviewed *ante*, p. 965,) which was executed neatly by Mr. Jewson. This public presentment confirmed our judgment of it on private perusal. It fell dead upon the audience; nor could the occasionally rich and masterly modulations make them forgetful of the meagreness of idea, and the escape by artifice from the requisitions of musical construction, to which we heretofore adverted. The last meeting for the season will take place on Friday next.

MISCELLANEA

Admission to the British Museum.—We have much pleasure in publishing the following letter—and trust its pleadings will be heard in Great Russell Street:

Please Sir, can you get me into the British Museum? I often hear papa say that the *Athenæum* does a great deal of good, and I have thought that perhaps you could ask the gentleman at the British Museum to let me in to see the curiosities. When I went last year with papa and mamma and sister Mary, the gentleman at the door asked how old I was, and papa said I was only seven—so he would not let me in. Papa said I had been to the National Gallery and to Hampton Court; but the gentleman said he could not let anybody in who was not ten years old. So papa took me over the way to Mr. Harris, and asked him to let me stay in his shop, whilst he and mamma and Mary went in. I cried very much, and Mary cried too. Mary, Sir, is just twelve years old, and mamma says that I do not break so many things as she does. Indeed, Sir, if you will ask the gentleman to let me in, I promise not to touch anything, and not to speak a word all the time, if I can help it. My friend James Ellis has just come to see me, and asks me to ask leave for him as well. He is nine years old. I remain,

Sir, your affectionate friend, Robert Inglis.

New Monthly Magazine.—As I understand it has been stated in a respectable literary journal, that on the secession of Mr. Hood from the editorship of the *New Monthly Magazine*, that work was placed in my hands, and as such statement is wholly without foundation, and is daily causing me annoyance and inconvenience, by subjecting me to the supposition of a responsibility from which I am entirely free, I hope you will think the error of sufficient literary interest to claim correction in the pages of the *Athenæum*.—I am, &c.

London, Dec. 6. P. G. Patmore.

Substitute for Indigo.—The *Morning Post* announces that a young Scotchman travelling in the Shand country, adjoining the Burman empire, has met with a plant, used by the natives for dyeing, which is likely to supersede the use of indigo, as it is only a tenth of the price. He has submitted it to the Agri-horticultural Society of Calcutta, and it has been pronounced to be a very valuable production—a genuine black vegetable dye.

Eruption of Etna.—Accounts from Malta announce an eruption of Mount Etna. Several noblemen's seats have been burned to the ground, some vineyards have been destroyed, and a paper manufactory of immense size and notoriety. Catania has fortunately escaped, as the lava, before reaching the town of Bronti, took a northerly direction. The road between Catania and Palermo is rendered impassable to some distance from the stratum of burning lava thereon deposited.

New Christmas Book by Mr. Dickens.

Shortly will be Published, in small 8vo, *Price Five Shillings,*

With Four Coloured Etchings and Woodcuts by Leech,

A CHRISTMAS CAROL.

IN PROSE.

BEING

A GHOST STORY OF CHRISTMAS,

By CHARLES DICKENS.

LONDON: CHAPMAN AND HALL, 186, STRAND.

A BOOK FOR THE HOLIDAYS.

Now ready, a Third and Improved Edition, illustrated with 33 Designs by W. B. Scott, engraved by Orrin Smith and Linton, royal 18mo. half-morocco extra, 4*s.* 6*d.*

NURSERY RHYMES OF ENGLAND.

Collected and Edited by JAMES ORCHARD HALLIWELL.

Also, the Second Edition, enlarged, post 8vo., 20 Woodcuts, cloth, 6*s.*

ENGLISH SURNAMES:

A Series of Essays on Family Nomenclature, Historical, Etymological, and Humorous.

By MARK ANTONY LOWER.

*** A most amusing volume, which comes home to every body.

J. R. Smith, 4, Old Compton-street, Soho, London.

WAVERLEY NOVELS,

ABBOTSFORD EDITION.

VOLUME THE FOURTH is just completed, 1*l.* 8*s.*

CONTAINING

THE BRIDE OF LAMMERMOOR—A LEGEND OF MONTROSE—and IVANHOE,

With Eleven Steel, and near to Two Hundred Wood Engravings.

☞ This Volume has in its Illustrations the advantage of the Names of—

SIR DAVID WILKIE, R.A.	T. DUNCAN, A.R.A.
SIR WILLIAM ALLAN, R.A.	A. FRASER.
C. STANFIELD, R.A.	R. R. M'IAN.
D. ROBERTS, R.A.	W. L. LEITCH.
EDWIN LANDSEER, R.A.	M. STANLEY.
THOMSON of Duddingston.	CHRISTIE.
A. NASMYTH.	FRANKLIN.
R. S. LAUDER.	KEARNEY,—and many others.

VOLS. I., II., and III. are always ready, beautifully done up, uniform with the one now completed.

Robert Cadell, Edinburgh; Houlston & Stoneman, London:

Who have just published TALES OF A GRANDFATHER, Vol. III., uniform with the Waverley Novels in 25 Vols., and Life of Napoleon in 5 Vols.

There are also ready Part 43 of THE ABBOTSFORD; and No. 102 and Part 25, as well as the completion of The Monastery, of THE PEOPLE'S EDITION of the NOVELS.

CHRISTMAS HOLIDAYS.

Punch's Holiday Letter!

My dear Public,—

It is with the most unfeigned satisfaction I now write to inform you that the completion of my **FIFTH VOLUME** is fixed for Saturday, the 23d instant.

I am happy to inform you that I have again obtained this year the Prize for Writing, and that I have completely beaten Master Gibbs in my Arithmetic.

The weekly specimens I have sent you of my Drawing, will, I hope, satisfy you of my proficiency in this branch of my studies. Deeply impressed with the parental care you lavish on me, I feel myself bound (in five volumes) to cultivate assiduously those parts (monthly parts) which you have encouraged me to put forth; and I am preparing to make exertions out of number, which will appear in the numberless numbers that I intend issuing.

Messrs. Bradbury & Evans, in whose Establishment I am placed, beg leave to present their compliments (of the season) to you, and to call your attention to the fact, that the whole of my valuable lessons are to be learned for the weekly sum of *Three-pence*, which includes Writing, Drawing, Moral Philosophy, Law, Poetry, the Use of the Globes, the Abuses of the World, and the usual Branches—that is to say Six entire Leaves—of the Tree of Knowledge.

On the 16th instant, it is my intention to present you with a **CHRISTMAS PIECE**, which I trust will meet your approbation, and hoping that in the ensuing Holidays we shall have much enjoyment in each other's society,

I remain, dear Public,

Your dutiful and affectionate

PUNCH.

Punch Office, 194, Strand,
December 9, 1843.

P.S.—I forgot to tell you that my **ALMANACK** will be ready on the 30th inst., and will be the admiration of the whole World.

IV.

The FIRST PART of MR. AINSWORTH'S WINDSOR CASTLE, price One Shilling. To be completed in Eleven Monthly Shilling Parts, with 110 Illustrations by George Cruikshank, &c.

The following are just ready:

V.

WHIMSICALITIES: A PERIODICAL GATHERING. By THOMAS HOOD, Esq. 2 vols. small 8vo. with numerous Illustrations by Leech.

VI.

WILD SPORTS IN EUROPE, ASIA, and AFRICA. By LIEUT.-COL. NAPIER. 2 vols. small. 8vo.

Henry Colburn, Publisher, 13, Great Marlborough-street.

NOW FIRST PUBLISHED,

2 vols. 8vo. with Portraits from Original Paintings, &c.

LETTERS of HORACE WALPOLE, EARL OF ORFORD, TO SIR HORACE MANN, His Britannic Majesty's Resident at the Court of Florence, From the year 1760 to 1785. Printed from the Original Manuscripts. (Concluding Series.)

"This correspondence is a perfect encyclopædia of information from the very best sources—politics from the fountain-head of parties—debates by the best of reporters—foreign affairs from an habitué of diplomatic society—sketches of public characters by their intimate acquaintance or associates—the gossip of fashionable life from a man of fashion—literature from a man of letters—the arts from a man of taste—the news of the town from a member of every club in St. James's-street—and all this retailed, by a pen whose vivacity and graphic power is equalled by nothing but the wonderful industry and perseverance with which it was plied through so long a series of years."—*Quarterly Rev.*

Richard Bentley, New Burlington-street, (Publisher in Ordinary to Her Majesty.)

The NEW WORK by the AUTHOR of 'The HISTORY of the REIGN of FERDINAND and ISABELLA.' Now ready, in 3 vols. 8vo. with Portraits and Maps,

HISTORY OF THE CONQUEST of MEXICO, with the Life of the Conqueror, Hernando Cortés, and a Preliminary View of the Ancient Mexican Civilization. By W. H. PRESCOTT, Esq. Author of 'The History of the Reign of Ferdinand and Isabella.'

"The more closely we examine Mr. Prescott's work, the more do we find cause to commend his diligent research. His vivacity of manner and discursive observations, scattered through notes as well as text, furnish countless proofs of his matchless industry. In point of style, too, he ranks with the ablest English historians, and paragraphs may be found in his volumes in which the grace and elegance of Addison are combined with Robertson's majestic cadence and Gibbon's brilliancy."—*Athenæum.*

Richard Bentley, New Burlington-street, (Publisher in Ordinary to Her Majesty.)

NEW VOYAGES and TRAVELS, JUST PUBLISHED BY MR. BENTLEY, New Burlington-street, (Publisher in Ordinary to Her Majesty.)

1. NARRATIVE of the DISCOVERIES on the NORTH COAST of AMERICA; effected by the Officers of the Hudson's Bay Company during the Years 1836-39. By THOMAS SIMPSON, Esq. 1 vol. 8vo. with Maps by Arrowsmith.
2. VOYAGE to the NORTH POLE, performed in His Majesty's Ships *Dorothea* and *Trent*, under the Command of Capt. BUCHAN, R.N. By Capt. BEECHEY, R.N., one of the Officers of the Expedition. 1 vol. 8vo. with Engravings.
3. NARRATIVE of a JOURNEY to KALAT; including an Account of the Insurrection at that Place in 1840, and a Memoir on Eastern Beloochistan. By CHARLES MASSON, Esq. Forming the Fourth Volume of his 'Journeys in Beloochistan,' &c. 1 vol. 8vo. with a new Map of the various Countries on either side of the Indus traversed by the Author, prepared by himself.
4. TRAVELS in the GREAT WESTERN PRAIRIES, the ANAHUAC and ROCKY MOUNTAINS, and in the OREGON TERRITORY. By THOMAS FARNHAM, Esq. 2 vols. post 8vo.
5. THE RHONE, the DARRO, and the GUADALQUIVIR: a Summer Ramble in 1842. By Mrs. ROMER, Author of 'Sturmer,' &c. 2 vols. 8vo. with Embellishments.

EUROPEAN LIFE INSURANCE COMPANY, No. 10, Chatham-place, Blackfriars, London. Established January, 1819.

President—Sir James Rivett Carnac, Bart. Rook Cliff, Lymington.
Vice-President—Geo. Forbes, Esq. 9, Park-square, Regent's-park.
With Twelve Directors.

FACILITIES are offered by this long-established Society to suit the views and the means of every class of insurers. Premiums are received yearly, half-yearly, or quarterly, or upon an increasing or decreasing scale. Or one-half only of the usual rate, with interest on the remainder, will be received for five or seven years, the other half to be paid at the convenience of the assured.

The insured for life participate septennially in the profits realized.

A liberal commission is allowed to Solicitors and Agents.

DAVID FOGGO, Secretary.

N.B. Agents are wanted in towns where none have been yet appointed.

NORTH BRITISH INSURANCE COMPANY, 4, New Bank-buildings, and 10, Pall Mall East; instituted in 1809. Incorporated by Royal Charter.

His Grace the Duke of Sutherland, *President.*
Sir Peter Laurie, Alderman, *Chairman of the London Board.*
Francis Warden, Esq. (Director H.E.I.C.) *Vice-Chairman.*
John Webster, M.D. 24, Brook-street, *Physician.*

Capital 1,000,000*l.* fully subscribed.
Annual Revenue, from Life Premiums.....£84,000
Accumulated Assurance Fund, exceeding 380,000

DIVISION OF PROFITS.

The Directors beg to remind those desirous of effecting Assurance on their lives, that all Policies opened with this Office on the participating scheme, before the 31st of December inst., will secure the full benefit of the current year's entry at the approaching septennial investigation in 1844, when, from the prosperous state of the Company's business, a considerable addition, or bonus, to the existing policies may be confidently expected.

Fire Insurances may be effected at the Company's Western Branch Office, 10, Pall Mall East, on Private Houses, Country Mansions, Furniture in the same, and Farm Steadings, at the lowest rates of premium corresponding to the risk.

Prospectuses, containing Tables of Rates, and a full List of the Directors, &c. who are all responsible *Partners*, may be obtained on application to Messrs. B. and M. Boyd, Resident Members of the Board, 4, New Bank-buildings; or to the Actuary, 10, Pall Mall East. JOHN KING, Actuary.

PALLADIUM LIFE ASSURANCE SOCIETY 7, Waterloo-place, London.

Directors.

George Arbuthnot, Esq.	Sir T. F. Fremantle, Bart. M.P.
Sir John Barrow, Bart. F.R.S.	Henry Harvey, Esq. F.R.S.
Lord Wm. R. K. Douglas, F.R.S.	James Murray, Esq.
Rt. Hon. Sir Edward Hyde East, Bart. F.R.S.	Samuel Skinner, Esq.
Charles Elliott, Esq. F.R.S.	Patrick Maxwell Stewart, Esq. M.P.
Joseph Esdaile, Esq.	Sir William Young, Bart.

Bankers—The London and Westminster Bank.
Physician—Theodore Gordon, M.D.

The Bonus declared by this Society is larger, in proportion, than that of most other Offices. The Assured are entitled to FOUR-FIFTHS, or 80 per cent. of the profits; which have produced, on an average, to the Assured, additions to their Policies of FORTY-THREE PER CENT. on the Premiums paid. This Bonus may, at the option of the Assured, be applied in *Reduction of future Premiums.*

ADDITIONS TO POLICIES.

The following Table shows the Additions made to Policies for 5000*l.*, *which had been in force for* Fourteen *Years, to the* 31*st December*, 1838.

Age at commencement.	Premiums paid in the 14 years.	Additions made to the Sum assured in the 14 years.	*Total Sums* now payable, in case of death.
10	£1192 18 4	£586 6 7	£5586 6 7
15	1350 8 4	681 2 7	5681 2 7
20	1525 8 4	768 5 1	5768 5 1
25	1622 18 4	797 2 8	5797 2 8
30	1809 11 8	813 15 6	5813 15 6
35	2094 3 4	854 6 5	5854 6 5
40	2377 1 8	923 18 1	5923 18 1
45	2727 1 8	1011 2 9	6011 2 9
50	3173 6 8	1129 15 7	6129 15 7

Persons travelling in Europe, by sea or land, in time of peace, are *not* charged any extra premium.

NICHOLAS GRUT, Secretary and Actuary.

CORPORATION of the LONDON ASSURANCE. Established by Royal Charter, A.D. 1720. FOR FIRE, LIFE, AND MARINE ASSURANCES. Offices, 19, Birchin-lane, Cornhill, and 10, Regent-street.

John Clark Powell, Esq., *Governor.*
Abel Chapman, Esq., *Sub-Governor.*
Lestock Peach Wilson, Esq., *Deputy Governor.*

Directors—Robert Allen, Esq.	John Furse, Esq.
John A. Arbuthnot, Esq.	Edwin Gower, Esq.
George Barnes, Esq.	Samuel Gregson, Esq.
Henry Blanshard, Esq.	Edward Harnage, Esq.
John Watson Borradaile, Esq.	Charles Kerr, Esq.
Edward Burmester, Esq.	Robert King, Esq.
Henry Cayley, Esq.	William King, Esq.
Aaron Chapman, Esq. M.P.	John Ord, Esq.
Robert Cotesworth, Esq.	George Probyn, Esq.
Charles Crawley, Esq.	John Rees, Esq.
James Dowie, Esq.	Daniel Stephenson, Esq.
Richard Drew, Esq.	Thomas Weeding, Esq.

Persons effecting Life Assurances with this Corporation have the choice of two plans: the one entitling them to an annual abatement of premium after five years' payment; the other at a lower fixed rate without abatement.

The leading features which distinguish the first of these plans from those of other Life Assurance offices are—

The guarantee of the Corporation for the full payment of the sums assured:

Annual abatements of premium, commencing after full five years' payments:

Total absence of partnership of any kind whatever:

Absolute exemption from the possibility of being called upon to contribute towards making good any losses:

And freedom from all charges of management.

The abatement of premium for the year 1843 on policies of five years' standing, under the first of the above plans, was 31*l.* 10*s.* 2*d.* per cent.

It may be here sufficient to state, as an example, that under the above system a person having effected a policy on or before the 1st of January, 1838, at an annual premium of 100*l.*, had, on the 1st of January, 1843, only the sum of 68*l.* 9*s.* 10*d.* to pay as that year's premium.

The future annual abatement must vary according to the success of this branch of the Corporation's business.

In the Fire Department assurances are effected at the lowest rates.

Attendance daily, from Ten till Four, at both Offices, where prospectuses and every information may be obtained.

ABEL PEYTON PHELPS, Esq., Superintendent of the Office in Regent-street.
JOHN LAURENCE, Secretary.

The Corporation having determined to increase the number of their agents, are desirous of receiving applications for appointments from parties of respectability and influence residing in the several towns and districts of England and Wales.

DISEASED AND HEALTHY LIVES ASSURED.

MEDICAL, INVALID, and GENERAL LIFE OFFICE, 25, Pall Mall, London. Capital 500,000*l.* This Office is provided with very accurately constructed Tables, by which it can Assure Diseased Lives on Equitable Terms. Increased Annuities granted on *unsound* Lives, the amount varying with the particular disease. Members of Consumptive Families assured at Equitable Rates. Loans granted upon personal security. F. G. P. NEISON, Actuary.

PATENT ELECTRO-PLATING and GILDING.—OLD PLATED GOODS, as well as every description of METAL ARTICLES, are by this process plated or gilt, and rendered equal to new, including every necessary repair, at a comparatively trifling expense. Iron articles coated with copper and zinc.—ELKINGTON & CO. 45, Moorgate-street, City; and 22, Regent-street, corner of Jermyn-street.

STONE-COLOURED CEMENT.

FELIX AUSTIN, of the New Road, Regent's Park, begs to inform Architects, Builders, Plasterers, &c. that during the process of manufacturing a very superior composition which has greatly improved his well-known Artificial Stone Ornaments, he has succeeded in making an excellent STONE-COLOURED CEMENT, adapted to building, more especially for facing brick walls and repairing decayed stone work, which he can supply at 2*s.* 6*d.* per bushel, at his Manufactory, near the Thames Tunnel, Rotherhithe.

A. M. PERKINS'S PATENT HOT-WATER APPARATUS, FOR WARMING AND VENTILATING.

FOR the successful operation of the above Plan, references may be made to the British Museum, the Chapels Royal, Whitehall and St. James's, Marlborough House, and Whitley Court, the residences of Her Majesty the Queen Dowager, his Grace the Archbishop of Canterbury's Palaces at Lambeth and Addington; his Grace the Duke of Beaufort's at Badminton; his Grace the Duke of Wellington's at Strathfieldsaye; his Grace the Duke of Hamilton's Palace at Hamilton; the Lord Chancellor's and Vice-Chancellor's Courts at Westminster and Lincoln's Inn; the Insolvent Debtors Court; the Old Bailey Sessions House; School of Design and Tithe Commissioners' Offices, Somerset House; Register of Designs and Record-office; Lincoln's-inn and Gray's-inn Chapels; Inner Temple Hall; County Fire Office; Register Office and Justiciary Courts, Edinburgh; Charles Babbage's, Esq. Dorset-street, Manchester-square; and many other Private Residences, Public Buildings, Churches, Hospitals, Lunatic Asylums, Union Poor Houses, Prisons, Hothouses, Conservatories, &c. &c.

Manufactory, No. 6, Francis-street, Gray's-inn-road.

WOLFF & SON'S CRETA LÆVIS, or PERMANENT DRAWING CHALK, in various Colours.

E. WOLFF & SON beg to apprise Artists and Amateurs that they have, by the introduction of great improvements in their CRETA LÆVIS, enabled it to be used the same as the ordinary pencil; and effects can now be produced equal to water-colour drawings, without the use of water or any other fluid, the various colours blending together with perfect harmony, beauty, and richness. It can be cut to a fine point, and is thus capable of giving a very delicate outline. For sketching from nature, the great advantages resulting from the adoption of the CRETA LÆVIS must be obvious, as without the use of water, palette, brushes, &c. all the various tints can be obtained with a truthfulness that cannot be surpassed,—thus superseding every other method in general use. The drawings may be carried in a portfolio with safety, as, unlike other crayons, they will neither rub off, nor suffer injury by coming in contact with the usual contents of a portfolio. The CRETA LÆVIS will not be affected by heat or change of climate. Specimens may be seen at the Polytechnic Institution, Regent-street; Royal Adelaide Gallery, Strand; and all respectable Stationers, where the CRETA LÆVIS may be had in sets of twelve, eighteen, twenty-four, and thirty-six, with or without boxes.

Instructions for Use.—In order to produce the delicate shades, the chalk must be cut to a fine point, and worked very lightly on the paper, blending the colours until the required tint be obtained. The deep shades merely require a broader point and increased pressure.—Bristol Board, Crayon Paper, or, in fact, any papers with a fine even surface, but not glazed, are well adapted for the CRETA LÆVIS.

WOLFF & SON beg to recommend their newly-invented SKETCHING PENCILS, or Permanent Black Chalks:—B B, very black, for foreground; H B, middle tint; N, neutral tint for distance. These Pencils are peculiarly adapted for sketching heads and landscapes, and are capable of producing a beautiful effect with very little labour. Having an adhesive quality, the drawings may be transmitted without fear of injury.

The method of using the CRETA LÆVIS is taught by Mr. W. H. KEARNEY, Member of the New Water-Colour Society.

*** Wolff & Son are desirous of opening an Agency with respectable Country Booksellers and Stationers for the sale of the above.—Manufactory, 23, Church-street, Spitalfields.

F. ARNOLD'S INDELIBLE MARKING INK, for Silk, Linen, and Cotton, which requires no preparation, and is warranted not to injure the finest fabric.

In neat cases, with directions for use.....1*s.* each.
Superior India Rubber Court Plaister, in cases..... 6*d.* and 1*s.*
Purified Violet, Camphor, and Charcoal Tooth-powder, recommended by the faculty, in boxes .. 6*d.* and 1*s.*
Medicated Pomatum, strongly recommended for the nursery and toilet, in pots..... 6*d.*

To be had of every respectable Stationer and Chemist in Town and Country.—Wholesale and Export Warehouse, 23, Curzon-street, May Fair.—Be particular in asking for F. Arnold's, as none other is genuine.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 21½, Bread-street, City, and by Slodden & Stocking, 43, High-street, Marylebone; W. Gethem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

LEA & PERRIN'S 'WORCESTERSHIRE SAUCE.' Prepared from the Recipe of a Nobleman in the County.—The above celebrated Sauce has, from the time of its introduction, been steadily progressing in public favour. Its peculiar piquancy, combined with exquisite flavour, establish it of a character unequalled in sauces. Noblemen and others, of acknowledged gout, pronounce it to be 'the only good sauce;' and for enriching gravies, or as a zest for fish, curries, steaks, game, cold meat, &c., especially unrivalled. As a rapidly-increasing inquiry is now made for it in all parts of the kingdom, the Proprietors beg to state that druggists, grocers, and others may be supplied by their agents—Messrs. Barclay & Sons, Farringdon-street; Mr. J. Harding, 59, King-street, Stepney; Messrs. Metcalfe & Co. 16, Southampton-row; and by the Wholesale Oil and Italian Warehousemen in London, upon the same terms as at their Warehouse at Worcester.—Sold retail, in half-pint bottles, at 1*s.* 6*d.*; pints, 2*s.* 6*d.*; and quarts, 5*s.* each, with the Proprietors' stamp over the cork of every bottle.

MEMOIRS OF THE RIGHT HON.

THE EARL OF ST. VINCENT, G.C.B. &c.
With the Correspondence with Lord Nelson, and other Distinguished Personages, now first published from the Original MSS. By JEDEDIAH STEPHENS TUCKER, Esq.
"This work appears under every circumstance which could give it value. The author is the son of Lord St. Vincent's private secretary and confidential friend, and he has also been assisted by the papers and recollections of his Lordship's family. The volumes are extremely valuable for the letters they contain, which exhibit the mind, feelings, and powers of some of the most eminent of Lord St. Vincent's contemporaries, with nearly the same clearness as his own."—*Athenæum.*
Richard Bentley, New Burlington-street,
(Publisher in Ordinary to Her Majesty.)

Now ready, in 4 vols. 8vo. with Portraits,

GEORGE SELWYN and his CONTEMPORARIES, with MEMOIRS and NOTES.
By J. HENEAGE JESSIE, Esq.
Author of 'Memoirs of the Court of England under the Stuarts,' and 'The Court of England under the Houses of Nassau and Hanover.'
*** The first two volumes, or the last two volumes, may be had separately to complete sets.
"One of the most authentic and vivid pictures of high life in England in the last century that can be found in our literature. George Selwyn has left the name of a master-spirit amongst the wits of his time. He was the centre of a wide circle of congenial companions, the letters from many of whom, here laid before the public, are written in a style of graceful and sustained facetiousness that might be favourably contrasted with the best epistolary productions of the French school."—*Morning Herald.*

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. BAUDRY, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28fr. or 1l. 2s. the year. To other Countries, the postage in addition.

[JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

UNIVERSITY COLLEGE, LONDON.—The PROFESSORSHIP of CHINESE LANGUAGE and LITERATURE at this College being now VACANT, Candidates are requested to send in their Applications and Testimonials before the 16th January, 1844.

CHAS. C. ATKINSON, Secretary to the Council.

13th December, 1843.

GRADUATION IN ARTS, &c.—Gentlemen of liberal education and pursuits may, through the assistance of the Advertiser, obtain a Degree in any Faculty for which their previous education may have qualified them. The Exercises, amount of Fees, &c., will be communicated in answer to all letters, giving particulars of applicant's status and education.—Address (pre-paid) to M. D., at Messrs. Nock's, Booksellers, 15, Tottenham-court New-road.

ANATOMY APPLIED TO THE FINE ARTS.

J. HENRY ROGERS, Esq., (Lecturer at the Middlesex Hospital Medical School), will deliver his SECOND COURSE of LECTURES on the above subject, illustrated by recent dissections and living models, at the ARTISTS' SOCIETY, Clipstone-street, Fitzroy-square, early in January, 1844.

By permission of the Members of the Society, a limited number of Tickets for the Course will be issued.—For Prospectus and Terms apply to the Artists' Colourmen; or to the Hon. Sec. J. J. Jenkins, Esq., No. 8, Caroline-street, Bedford-square.

LECTURES ON PERSPECTIVE.—

30, Newman-street, Dec. 6, 1843.

MR. WILKIN begs to announce to the Public, that in consequence of the very favourable opinion formed of his Lectures on Perspective, he has been solicited to form a CLASS for the purpose of teaching its elementary principles. To those who are studying Drawing in any of its branches, these principles are absolutely necessary, as they prevent the artist from making what may be called grammatical errors in his drawing; for such is the power of lines, that if the object be correctly drawn, but little light and shadow are necessary to convey a correct idea of what is represented.

Mr. Wilkin therefore proposes to give Eight Lectures of an hour and a half each: each Lecture to consist of a succession of demonstrations, of the most useful forms, to be drawn by the Lecturer from models before the pupils, who will be provided with a Book, in which they will be enabled to sketch correctly any diagram without the aid of either rule or compass; thus giving them a clear idea how to proceed when they are drawing either from nature, busts, or, in fact, from any object that may be placed before them.

As many persons fancy that Perspective is only adapted to professional men or architects, and not to amateurs or ladies, Mr. Wilkin begs to state, that as he does not confine himself to any particular branch of the Fine Arts, his Lectures will be found most useful to all who are studying Drawing, whether it be landscape, animals, or the human figure, and hopes to be able to establish the fact, that the study of Perspective is not only replete with interest and highly essential, but that the power it imparts, and the time and anxiety it saves, more than repays the pupil for the very short period he has bestowed in its acquirement.

The First and Second Lectures of the Course will be delivered on TUESDAY, the 2nd, and FRIDAY, the 5th, of January, 1844, and continued on the same days in each successive week. To commence at Eleven o'clock in the Morning precisely. Terms, One Guinea for the Course.

The Course will include the following Subjects:

Explaining what is meant by Perspective—practically showing the power it gives a person possessing a knowledge of it, and to how many branches of Art its principles are applicable.

Geometry—showing the Power and Use of the Triangle, as applicable to Drawing;—Definition of the various Planes;—Vision, Point of Sight, Horizon, Point of Distance, and Vanishing Points defined.

Parallel Perspective—showing, by means of a Model, the Forms of objects assume when transferred to a Plane which intersects the Rays of Vision vertically;—Ground Plans, their use, and a means of ascertaining the *exact* Proportions of Figures, Animals, &c. which are to be introduced into the Picture.

Oblique or Angular Perspective—Drawing the Circle in Perspective, representing Doors, Shutters, and Boxes, opened at various angles by means of the Circle, and showing, aided by moveable Models, the Construction of Gothic Roofs, and describing a simple mode of Drawing these objects correctly by the eye.

Inclined Planes, up and down hill;—to place correctly Elizabethan Chimneys on the Roofs of Houses—making Perspective Drawings without the aid of Vanishing Points; and simplifying the Drawing of Fortifications, and Geometrical Staircases.

On Light and Shadow, as applicable to Architecture, Landscape, Sea Views, and the Human Figure;—also a rapid Method, by which means the Artist will be enabled to draw correctly the Human Figure in exact proportion, let the scale be what it may.

The Lectures will take place at Mr. Wilkin's residence, No. 30, NEWMAN-STREET, where Tickets and every particular can be obtained.

Mr. Wilkin further begs to state, that he shall be happy to arrange with the heads of Colleges, Institutions, or Schools, to deliver his Course of Lectures at their respective establishments.

SCHOOL OF METHOD.

Under the Sanction of the Committee of Council on Education.

APOLLONICON ROOMS, 101, St. Martin's-lane.

SINGING on the METHOD of WILHEM, under the Direction of Mr. JOHN HULLAH.

CLASS No. 30, FOR GENTLEMEN,

Will commence on FRIDAY, January 19th, 1844, at a Quarter past Six o'clock.

Terms—30*s.* for the Course of Fifty Lessons, of one hour and a quarter each, or 8*s.* per month (Eight Lessons); but Schoolmasters, Sunday-School Teachers, &c., will be admitted, on payment of 15*s.* for the Course, or 3*s.* per month.

CLASS No. 31, FOR LADIES,

Will commence on FRIDAY, January 26th, at a Quarter before Five o'clock.

Terms—Same as Class No. 30.

Each Pupil must be provided with the Manual, price 5*s.*, published by Mr. Parker, 445, West Strand.

Tickets and full particulars may be obtained at the Office, 101, St. Martin's-lane.

LIVERPOOL HIGH SCHOOL.

MECHANICS' INSTITUTION.

This School is intended to afford to the Sons of Merchants, and others of the Middle Classes, Instruction in the various branches of a Literary, Scientific, and Commercial Education. It is divided into three sections:—1. Preparatory. 2. The Junior. 3. The Senior. The Preparatory Section consisting of three Classes; the Junior and Senior Sections each of four Classes. The Preparatory Section is designed to qualify Pupils for the higher Sections. The courses of instruction in the Junior and Senior Sections are so distinguished that Boys leaving School, after having passed through the Junior Section only, receive a good business education, by being thoroughly trained in the departments of English Reading, Grammar, Spelling, Writing, Arithmetic, History, Geography, &c., and introduced to such an acquaintance with the elementary parts of Chemistry, Natural Philosophy, French, and Classics, as will enable them, at any future period, to advance in the further study of those branches; while Boys intended to pass through the Senior Department, also, are fitted to receive the more extended course of instruction therein provided. In the Senior Section, Mathematics and Classics occupy a much more prominent place than in the earlier part of the Course, the other subjects of instruction not being by any means neglected.

Reports of the conduct and progress of the Pupils are forwarded monthly to their parents or guardians. Detention after school hours is the only mode of punishment employed. The hours of attendance are from Nine to Twelve, A.M., and from Two to Five, P.M. The Quarter-Days are 1st of January, 1st of April, 1st of July, and 1st of October. The vacations are six weeks at Midsummer, two weeks at Christmas, and three days at Easter.

The School is under the superintendence of the following Masters:—

WILLIAM HUNTER, L.L.D., Head Master of the School, and Principal of the Classical Department, assisted by WILLIAM LITTLE, B.A.

WM. HARTSHORN, A.M. T.C.D., Second Master, and Principal of the Mathematical Department, assisted by JAMES ENGLAND, B.A. T.C.D.

CHARLES W. CONNON, A.M., Principal of the English Department, assisted by Mr. J. A. LLOYD.

T. E. SULIOT, A.M., Teacher of French.

Mr. HUGO REID, Teacher of Natural Philosophy.

Mr. W. H. BALMAIN, Teacher of Chemistry.

Mr. H. C. PIDGEON, Teacher of Drawing.

Mr. JOHN GOW, Teacher of Writing.

PREPARATORY SECTION.

Mr. J. G. DAVIDSON, Teacher of Geography, Knowledge of Objects, History, &c.

Mr. ANDREW GLEN, Teacher of English Reading, Spelling, Grammar, Derivations, &c.

Mr. ALEXANDER STEWART, Teacher of Writing and Arithmetic.

EXHIBITION TO LONDON UNIVERSITY.

James Yates, Esq., has generously devoted the sum of 200*l.* to be adjudged to the best pupil of the sixth class, to enable him to take his degrees to the Faculty of Arts of the London University. This sum will be payable by instalments, as follows:—40*l.* on his matriculating, 60*l.* on his taking the degree of B.A., and 100*l.* on his taking that of M.A.

Some of the Masters take BOARDERS.

Information in regard to terms, and all other matters connected with the School, will be communicated on application to

W. B. HODGSON, Secretary.

APARTMENTS FOR AN ARTIST.—TO BE LET, UNFURNISHED, a Suite of Apartments on the First Floor of a most respectable private house, in a very desirable situation, suitable for an Artist. The Painting-room has a raised window; there is a drawing-room adjoining, and an airy bed-room above. They have been recently occupied by a Portrait painter, and there are gas-fittings and other requisites that may be taken at a valuation, if desired. Apply at No. 67, Berners-street, Oxford-street.

THE BOOK OF CURIOSITIES,

NATURAL AND ARTIFICIAL,

Descriptive of the most remarkable Natural Phenomena, and the principal Wonders of Ancient Art.

London: Wm. S. Orr & Co.

DESTITUTION IN THE METROPOLIS.—ROYAL FREE HOSPITAL for the DESTITUTE SICK and DISEASED, Gray's-inn-road (late Greville-street); founded A.D. 1828. *Patron*—The QUEEN.

This Hospital, which is entirely devoted to destitution in its most appalling and pitiable form, viz., accompanied by sickness and disease, is now established on a scale of sufficient magnitude, that with proper support it may be rendered capable of admitting into its wards all the "casual sick" of this great metropolis. It requires but the funds in order to have 500 beds immediately available for the reception of these, the most wretched of our fellow-creatures. Moreover, it gratuitously affords medical advice and medicine to more, on the average, than 1,800 out-patients a-week.

It is wholly supported by voluntary subscription, has no funded property of its own, nor any other income than that which is contributed by the philanthropic portion of the community. To these it is most earnestly recommended by the Committee at this period of extreme destitution and consequent sickness and peril of life. Its doors are daily thronged with the most miserable objects, and so great has been the demand upon its resources in consequence during the whole summer, that it has been compelled to borrow to a large amount from the fund subscribed towards the new building to defray the current expenses.

Contributions will be kindly received by Messrs. Coutts & Co.; Messrs. Drummonds & Co.; Messrs. Herries & Co.; Messrs. Smith, Payne & Smiths; Messrs. Glyn & Co.; Messrs. Jones, Loyd & Co.; Messrs. Barclay, Bevan & Co.; Messrs. Denison & Co.; Messrs. Williams, Deacon & Co.; Messrs. Prescott & Co.; Messrs. Ransom & Co.; Messrs. Overend, Gurney & Co.; Messrs. Nisbet & Co. Berners-street; and at the Secretary's Office, by the Rev. R. C. PACKMAN, Sec.

Cast-off apparel, male or female, will be gratefully acknowledged,

THE AUTHORITY of SCRIPTURE with respect to addressing PRAYER and WORSHIP to the LORD JESUS CHRIST: with Notes.

By HUMAN HEINPETTER,

Author of 'Rules for Ascertaining the Sense conveyed in Ancient Greek Manuscripts,' &c.

Cradock & Co. 48, Paternoster-row.

THE NEW HISTORICAL ROMANCE.

Now ready at all the Libraries, in 3 vols.

WHITEFRIARS;

Or, The Days of Charles the Second.

Also, just published,

THE BROTHERS: a Tale of the Fronde. By the Author of 'Oliver Cromwell,' 'Marmaduke Wyvil,' &c. 3 vols.

"We strongly suspect this will be the most popular work Mr. Herbert has yet written. It is full of incident and action; and the mode in which the whole romance has been connected with the great historical characters of the period—the Mazarines, the Turennes, the Grand Condé, &c. reflects the highest credit on the skill and tact of the writer."

Naval and Military Gazette.

Just ready,

THE YOUNG MOTHER.

In 12mo. price 6s. cloth, a New Edition of

1. A GRANDMOTHER'S ADVICE to YOUNG MOTHERS, on the Physical Education of Children. By M. J. late Countess of MOUNTCASHELL.

*** "This book is the production of many years' experience, and much reflection; and the Author trusts that it will be of use to those for whom it is designed—the anxious mother, the attentive governess, and the careful nurse."—*Preface.*

FLOWERS IN CONSTANT BLOOM.

In 12mo. price 5s. cloth lettered,

2. Guide to the Conservatory; being a concise Treatise on the Management of the Hot-house and Green-house; the Forcing of Bulbs, Shrubs, &c.: and the Best Mode of Keeping a Succession of Bloom through *every* month of the year; exemplified in a select list of the most admirable plants of the present day, under the arrangement both of Jussieu and Linnæus—including their native country, propagation, and the soil adapted to each. By Richard Bainbridge, Flower Gardener to the Right Hon. Lord Wenlock.

*** The peculiar characteristic of this work is the means of obtaining a constant and large supply of flowers. It includes a very extensive List of Orchidaceæ, with their cultivation as pursued by the most eminent practitioners.

FRENCH GRAMMAR FOR PRIVATE TUITION.

In 8vo. price 12s. in cloth, the Ninth Edition of

3. A Guide to the French Language, especially devised for Persons who wish to Study the Elements of that Language Without the Assistance of a Teacher. By J. J. P. Le Brethon.

4. A Key to the Exercises in the above Work, by means of which any person of a mature understanding may acquire the elements of the French language practically, as surely as if a professed teacher were sitting by his side; and, with a very superficial knowledge of it, may teach it to others. Directions are given in the Key to parents not accustomed to teach languages, who wish to instruct their children, with the assistance of this book, how they must proceed. Price 8s.

5. The World in a Pocket-Book; or, Universal Popular Statistics; embracing the Commerce, Agriculture, Revenue, Government, Manufactures, Population, Army, Navy, Religions, Press, Geography, History, Remarkable Features and Events, Navigation, Inventions, Discoveries, and Genius, of Every Nation on the Globe: including an ample General Synopsis of the United States, &c. &c. By W. Crump. Price 4s.

New Christmas Book by Mr. Dickens.

On the 19th will be Published, in small 8vo, Price Five Shillings,

With Four Coloured Etchings and Woodcuts by Leech,

A CHRISTMAS CAROL.

IN PROSE.

BEING

A GHOST STORY OF CHRISTMAS.

By CHARLES DICKENS.

LONDON: CHAPMAN AND HALL, 186, STRAND.

Now ready, the FOURTH and LAST PART of the

HON. E. EDEN'S PRINCES AND PEOPLE OF INDIA.

Price 21*s.*; coloured, 2*l.* 12*s.* 6*d.*

*** This Work is now complete, and contains Portraits of most of the characters that have figured in the late disturbances in India, and is considered a standard and national work.

DICKINSON & SON, 114, New Bond-street.

A BOOK FOR THE HOLIDAYS.

Now ready, a Third and Improved Edition, illustrated with 33 Designs by W. B. SCOTT, engraved by ORRIN SMITH and LINTON, royal 18mo. half-morocco extra, 4*s.* 6*d.*

NURSERY RHYMES OF ENGLAND.

Collected and Edited by JAMES ORCHARD HALLIWELL.

Also, the Second Edition, enlarged, post 8vo., 20 Woodcuts, cloth, 6*s.*

ENGLISH SURNAMES:

A Series of Essays on Family Nomenclature, Historical, Etymological, and Humorous.

By MARK ANTONY LOWER.

*** A most amusing volume, which comes home to every body.

J. R. SMITH, 4, Old Compton-street, Soho, London.

NEW WEEKLY NEWSPAPER.

On SATURDAY, the 6th of January, 1844, will be published, price 8*d.* in Sixteen folio pages, containing Forty-eight closely-printed columns, No. I. of THE

Municipal and Poor Law Gazette,

AND LOCAL FUNCTIONARY.

A Stamped Newspaper of all matters relating to Local Jurisdiction, and of General News.

"In 1830, when men in England were generally expecting great political changes, one of the most practical and sagacious of our public men was reproached by his friends that he did not join with them in the discussion of the constitutional questions then in agitation. His reply is very nearly our Text—'*Let me have the legislating for the Parish: I leave to the boys in the Debating Societies the remodelling of the Constitution.*'"—*Extract from the Prospectus.*

Published by A. MAXWELL & SON, Law Publishers, 32, Bell-yard, Lincoln's Inn;

To whom all Communications for the Editor, and Advertisements, are requested to be addressed. Orders may be sent as above, or to any Newsman in Town or Country.

PUNCH'S ALMANACK!

MR. PUNCH will have the pleasure of laying before his Friends, on the 30th Inst.,

HIS ALMANACK FOR THE NEW YEAR,

wherein the events of each Month will be graphically illustrated in PUNCH'S most approved fashion.

The whole of the Jokes—several hundreds—are reared by the same hands as those which obtain every week the silver and copper medals from the public, who are always the best judges of a good thing, but of whose discrimination it is not for MR. PUNCH to speak. The Cuts, which are of a kind to invite the public to come again (and again), are by Messrs. LEECH, MEADOWS, HAMERTON, &c.

Published at the OFFICE, 196, STRAND. Price 3*d.*; and Stamped, to go by post, 4*d.*

VOL. V., price 8*s.* will be published in time for Christmas.

PATRICK, LOWTH, ARNALD, WHITBY, AND LOWMAN.

On Monday, the 1st of January, 1844, will be published, Part I. price 2*s.*, and Vol. I. price 24*s.*, to be continued on the 1st and 15th of every month, until completed in Forty-seven Parts, at 2*s.* each, or in Vols. published every Three Months, at 24*s.* each,

A CRITICAL COMMENTARY AND PARAPHRASE

ON THE

OLD & NEW TESTAMENTS,

AND THE

APOCRYPHA

BY

PATRICK, LOWTH, ARNALD, WHITBY, AND LOWMAN.

A New Edition, Imperial Octavo,

WITH THE TEXT PRINTED AT LARGE, IN FOUR VOLUMES.

CONDITIONS OF PUBLICATION.

1. A Part of this valuable Work will be published every fortnight until completed, in Forty-seven Parts, each averaging Six Sheets, at 2*s.* each.
2. For the convenience of families, the Work will be published also in Volumes every Three Months, at 1*l.* 4*s.* each, in cloth boards.
3. The Work will be uniformly printed on a superfine Paper made on purpose by Mr. Dickinson.
4. The Work is in such a state of progress, that no delay is expected to take place in the course of its publication.

ADVANTAGES OF THIS EDITION.

In all the previous editions of this valuable Commentary the Annotations were printed WITHOUT THE TEXT, thus rendering it a mere book of reference for the study. In this edition the text is placed at the head of each page, as in other Commentaries on the Holy Scriptures, thus adapting it to general use both in the family and the closet.

TO THE PUBLIC.

To those who may be unacquainted with THE EXCELLENCIES OF THIS COMMENTARY AND PARAPHRASE,

IT MAY BE NECESSARY TO STATE THAT

BISHOP PATRICK,

Whose Commentary includes from Genesis to the Song of Solomon, is esteemed among theological writers one of the most acute and sensible, and therefore useful Illustrators of the Old Testament. "In his Exposition," says Dr. WOTTON, in his Thoughts concerning the Study of Divinity, "there is great learning, and great variety, and what will save the reading of many volumes."

DR. LOWTH,

The father of the well known Bishop of London, completed the Old Testament, and is considered one of the most judicious Commentators on the Prophets. Few men were more deeply versed in critical learning, there being scarcely any author, Greek or Latin, profane or ecclesiastical, that Dr. LOWTH had not read, constantly accompanying his reading with critical and philosophical remarks: he adheres strictly to the literal meaning of the inspired writer, and there is not a great appearance of criticism, but the original text and all critical aids are closely studied by this most learned divine. Bishop WATSON pronounced LOWTH'S to be the best Commentary on the Prophets in the English language.

ARNALD ON THE APOCRYPHA.

The Apocryphal Books of the Old Testament, though not a part of the inspired writings, contain much historical information, and are useful for illustrating the idiom of the New Testament. ARNALD'S is a critical Commentary on such books of the Apocrypha as are appointed to be read in churches. The work was originally published at different times, and is deservedly held in high estimation. Archbishop CRANMER, in the Preface to his Bible, says, that "men may read them (the Books of the Apocrypha) to the edifying of the people, but not to confirm and strengthen the doctrines of the church."

DR. WHITBY ON THE GOSPELS AND EPISTLES.

The Commentary on the New Testament is by Dr. WHITBY, who in the course of his work exhibits labour and research worthy of the subject. Few men have brought a greater portion of natural sagacity, and a larger measure of appropriate learning, to the interpretation of Scripture. His knowledge of the Bible itself was thorough and complete, and his acquaintance with the writings of the fathers and of modern interpreters was profound. On a difficult text or expression, the reader will seldom consult him in vain. Dr. ADAM CLARKE, in the learned Preface to his Commentary, says, "The best comment on the New Testament, taken in all points of view, is certainly that of WHITBY. He has done all that should be done; he is learned, argumentative, and thoroughly orthodox."

LOWMAN ON THE REVELATION.

Bishop TOMLINE includes this work in his List of Books for Clergymen and Biblical Students. Dr. DODDRIDGE has said of it, that he "has received more satisfaction from it, with respect to many difficulties, than he ever found elsewhere, or expected to find at all." LOWMAN'S scheme of the Seven Seals is also approved by the late Rev. DAVID SIMPSON, in his Key to the Prophecies, as more consistent with history than that of Bishop Newton in his Dissertations on the Prophecies.

The reader will thus see from the authorities cited in this brief view, that the learned writings of PATRICK, LOWTH, ARNALD, WHITBY, and LOWMAN, form a perfect and invaluable series of English Commentaries on the Old and New Testaments and on the books of the Apocrypha.

London: printed for THOMAS TEGG, 73, Cheapside.

REVIEWS

A System of Logic, Ratiocinative and Inductive. By John Stuart Mill, Esq. 2 vols. Parker.

Easy Lessons on Reasoning. Parker.

THAT the 'Easy Lessons on Reasoning' are from the pen of Archbishop Whately, is as clearly established by internal evidence, as if his name had been given in the title. They are stamped with all the peculiarities of his style,—clearness of statement, felicity of illustration, and precision of diction,—and the principles they elucidate are the same as those set forth in his standard work on Logic, to which this little volume forms an appropriate introduction. "The existing treatises upon Logic," says his Grace, "may be compared to ships well-freighted, but which can only unload at a few wharfs, carefully constructed in advantageous situations. The want is, of small boats, drawing very little water, which can carry ashore small parcels of the cargo on every part of the coast, and run up into every little creek."

Adopting this illustration, we may say that we have before us two richly freighted ships in Mill's volumes, and "the trim-built wherry" in the Easy Lessons, by the aid of which we trust to land in our columns a fair assortment of the cargo. But before entering on this task, it is necessary to remove some general prejudices which are commonly entertained on the subject of Logic, and which prevent it from being regarded as an article for universal consumption, and not the luxury of a favoured few. The error has arisen from Logic being too commonly regarded as the mere art of disputation, and men have been led into this mistake from the fact, that the most ostensible use of logic is in controversies. This very tendency to regard any art or science as useful only in those departments of life to which it is most commonly and palpably applied, is an evidence for the necessity of repeatedly instituting such inquiries as those contained in the volumes before us. A little reflection might have taught us, that before the controversialist proceeded to convince his adversary, he must have gone through certain mental processes to arrive at conviction himself, and consequently that there must be some connexion between the means employed to force a conclusion upon an adversary, and those employed to arrive at the same conclusion in the individual judgment. "If there were but one rational being in the universe, that being might be a perfect logician; and the science and art of logic would be the same for that one person, as for the whole human race." In other words, there is a science, —a discoverable set of principles,—by which a man estimates evidence for himself, and forms conclusions, deductions, or inferences, and there is consequently an art—or possible arrangement of rules founded on those principles—by which the sufficiency of the evidence to bear out the conclusion, might be tested. Thus viewed, it is clear that Logic is as applicable, and we may add, as necessary, to right thinking as to right arguing.

"Logic, then, is the *science* of the operations of the understanding which are subservient to the estimation of evidence," and the art which points out "to what condition all facts must conform in order that they may prove other facts." It is analytic as a science, and synthetic as an art, and this distinction must be kept constantly in view when its claims to attention are under discussion.

Mr. Mill has entered on his task of completing a system of Logic with the rare qualification of a due appreciation of the merits of his predecessors. He has had the courage to do justice to Aristotle, and to sever him from his scholastic followers, and he has never hesitated to confess his obligations to the greatest of the Greek philosophers. But he has taken a wider range, and a more analytic course than the preceptor of Alexander; it is the science rather than the art of Logic, which occupies Mr. Mill's attention; his great object is to range, in systematic order, all the mental processes by which the mind is led from the more known to the less known—in fact, he aims at accomplishing for the science, that which Archbishop Whately effected for the art. It is curious that this difference of object explains, to a considerable extent, their seeming difference of opinion on the question of syllogism. Archbishop Whately asserts that syllogism "is the form in which all correct reasoning on whatever subject may be exhibited;" Mr. Mill, on the contrary, asserts that we may and perpetually do reason "from particulars to particulars, without passing through generals," that is, without forming a major proposition. The question, however, is not whether persons do or do not reason thus, but whether they reason correctly when they do so. Mr. Mill himself has correctly described the major proposition as a general rule derived from authority,—previous reasoning,—or the inductions of experience. Now the example he has given of reasoning from the particular, actually includes a latent assumption of the general. When an old crone says, "give this nostrum to Lucy, it will cure her hooping-cough, as it cured my Peggy's," she does not really argue from the particular instance of Peggy, but from a general rule which she had formed in her own mind, that what had been successful in Peggy's case would be successful in all others. Logically speaking, she has framed a general rule from imperfect induction.

The *judicial* use of the syllogism is not limited to Hermeneutics, because the maxim "*de dicto respondent judices, de facto jurati*," is not of rigid and universal application. Take for instance—

> Certain overt acts constitute treason;
> George committed those acts:
> ∴ He is guilty of treason.

Here in fact are two issues to be tried, whether the acts amount to the crime of treason, and whether they were perpetrated by George. Suppose him merely to have blown a soap-bubble in the direction of the palace, and to have said, "There,—I intend that to kill the queen," though there might be no doubt of the fact, the question would still be open respecting the import of the fact, and it would be clearly unjust to keep the major proposition from the consideration of the jury. We think that Mr. Mill has taken too low a view of the functions of syllogism, and instead of regarding it as coming in after induction, we hold it to be essential, at least as a test to every step in the inductive process.

Mr. Mill advocates Dugald Stewart's view of the hypothetical character of the geometric axioms and definitions, but we do not think that he has successfully met Mr. Whewell's able criticism of the Scotch philosopher. It would be quite possible to construct a scientific system on impossible postulates; for instance, the social system of imaginary beings under imaginary circumstances of existence; but the conclusions at which we should arrive, would have no relation to existing facts, while the consistency of geometrical conclusions with fact is acknowledged on all hands. We are, however, bound to add, that Mr. Mill does not, in the case either of syllogisms or axioms, deny the utility of scholastic science; on the contrary, he makes large concessions to the logic and geometry of the schools, requiring only that some abatement should be made in some of the pretensions set forth by too enthusiastic partizans.

We turn now to the part of Mr. Mill's work which must secure for him high rank among the masters of modern science, his systematic analysis and arrangement of the principles of inductive reasoning. The order of invariable succession, and the relations between cause and effect, have been the subject of fierce dispute between modern metaphysicians, but much of the controversy might have been avoided by attending to a simple distinction admirably stated by Mr. Mill; the neglect of which was the cardinal error of the Baconian philosophy:—

"It is seldom, if ever, between a consequent and one single antecedent, that this invariable sequence subsists. It is usually between a consequent and the sum of several antecedents; the concurrence of them all being requisite to produce, that is, to be certain of being followed by, the consequent. In such cases it is very common to single out one only of the antecedents under the denomination of Cause, calling the others merely Conditions. Thus if a man eats of a particular dish, and dies in consequence, that is, would not have died if he had not eaten of it, people would be apt to say that eating of that dish was the cause of his death. There needs not, however, be any invariable connexion between eating of the dish and death; but there certainly is, among the circumstances which took place, some combination or other upon which death is invariably consequent: as, for instance, the act of eating of the dish, combined with a particular bodily constitution, a particular state of present health, and perhaps even a certain state of the atmosphere; the whole of which circumstances perhaps constituted in this particular case the *conditions* of the phenomenon, or in other words the set of antecedents which determined it, and but for which it would not have happened. The real Cause, is the whole of these antecedents; and we have, philosophically speaking, no right to give the name of cause to one of them, exclusively of the others. What, in the case we have supposed, disguises the incorrectness of the expression, is this: that the various conditions except the single one of eating the food, were not *events* (that is, instantaneous changes, or successions of instantaneous changes) but *states*, possessing more or less of permanency; and might therefore have preceded the effect by an indefinite length of duration for want of the event which was requisite to complete the required concurrence of conditions: while as soon as that event, eating the food, occurs, no other cause is waited for, but the effect begins immediately to take place: and hence the appearance is presented of a more immediate and closer connexion between the effect and that one antecedent, than between the effect and the remaining conditions."

This at once overthrows Reid's plausible objection to antecedency as a definition of causation; he says that "night might thus be said to be the cause of day";* but day follows not only night, but several other antecedents, and amongst them the appearance of the sun on the verge of the horizon. The application of the laws of causation to the experimental sciences opens a wide field of investigation, which could not be profitably examined within reasonable limits. The value, however, of inquiries into the methods of experimental inquiry may be illustrated by showing the application of two of these methods to ascertaining the immediate cause of death produced by metallic poisons:—

"When solutions of these substances are placed in sufficiently close contact with many animal products, albumen, milk, muscular fibre, and animal membranes, the acid or salt leaves the water in which it was dissolved, and enters into combination with the animal substance; which substance, after being thus acted upon, is found to have lost its tendency to spontaneous decomposition, or putrefaction. Observation also shows, in cases where death has been produced by these poisons, that the parts of the body with which the poisonous substances have been brought into contact, do not afterwards putrefy. And finally when the poison has been supplied in too small a quantity to destroy life, eschars are produced, that is, certain superficial portions of the tissues are de-

* "Non est ea causa quæ antecedit, sed quæ *efficienter* antecedit."—CICERO.

Digitized by Google

stroyed, which are afterwards thrown off by the reparative process taking place in the healthy parts. These three sets of instances admit of being treated according to the Method of Agreement. In all of them the metallic compounds are brought into contact with the substances which compose the human or animal body; and the instances do not seem to agree in any other circumstance. The remaining antecedents are as different, and even opposite, as they could possibly be made; for in some the animal substances exposed to the action of the poisons are in a state of life, in others only in a state of organization, in others not even in that. And what is the result which follows in all the cases? The conversion of the animal substance (by combination with the poison) into a chemical compound, held together by so powerful a force as to resist the subsequent action of the ordinary causes of decomposition. Now, organic life (the necessary condition of sensitive life) consisting in a continual state of decomposition and recomposition of the different organs and tissues; whatever incapacitates them for this decomposition destroys life. And thus the proximate cause of the death produced by this description of poisons, is ascertained, as far as the Method of Agreement can ascertain it. Let us now bring our conclusion to the test of the Method of Difference. Setting out from the cases already mentioned, in which the antecedent is, the presence of substances forming with the tissues a compound incapable of putrefaction (*à fortiori* incapable of the chemical actions which constitute life), and the consequence is death, either of the whole organism, or of some portion of it; let us compare with these cases other cases, as much resembling them as possible, but in which that effect is not produced. And, first of all 'many insoluble basic salts of arsenious acid are known not to be poisonous. The substance called alkargen, discovered by Bunsen, which contains a very large quantity of arsenic, and approaches very closely in composition to the organic arsenious compounds found in the body, has not the slightest injurious action upon the organism.' Now when these substances are brought into contact with the tissues in any way, they do not combine with them; they do not arrest their progress to decomposition. As far, therefore, as these instances go, it appears that when the effect is absent, it is by reason of the absence of that antecedent which we had already good ground for considering as the proximate cause. But the rigorous conditions of the Method of Difference are not yet satisfied; for we cannot be sure that these unpoisonous bodies agree with the poisonous substances in every property, except the particular one, of entering into a difficultly decomposable compound with the animal tissues. To render the method strictly applicable, we need an instance not of a different substance, but of one of the very same substances, under circumstances which would prevent it from forming, with the tissues, the sort of compound in question; and then, if death does not follow, our case is made out. Now such instances are afforded by the antidotes to these poisons. For example, in case of poisoning by arsenious acid, if hydrated peroxide of iron is administered, the destructive agency is instantly checked. Now this peroxide is known to combine with the acid, and form a compound, which, being insoluble, cannot act at all on animal tissues. So, again, sugar is a well-known antidote to poisoning by salts of copper; and sugar reduces those salts either into metallic copper, or into the red suboxide, neither of which enters into combination with animal matter. The disease called painter's colic, so common in manufactories of white lead, is unknown where the workmen are accustomed to take, as a preservative, sulphuric-acid-lemonade (a solution of sugar rendered acid by sulphuric acid). Now diluted sulphuric acid has the property of decomposing all compounds of lead with organic matter and (of course) of preventing them from being formed."

Without going quite so far as to assert that Mr. Mill has done as much for Inductive, as Aristotle for Deductive Logic, we must say that the Treatise on Fallacies which forms the fifth division of this work, has given to the Inductive form of reasoning, a consistency and completeness which it had never before attained. Two examples of the Fallacy of Non-observation deserve to be quoted:—

"The economical workings of society afford innumerable cases in which the effects of a cause consist of two sets of phenomena: the one immediate, concentrated, obvious to vulgar eyes, and passing, in common apprehension, for the whole effect; the other widely diffused, or lying deeper under the surface, and which is exactly contrary to the former. Take, for instance, the vulgar notion, so plausible at the first glance, of the encouragement given to industry by lavish expenditure. A, who spends his whole income, and even his capital, in expensive living, is supposed to give great employment to labour. B, who lives upon a small portion, and invests the remainder in the funds, is thought to give little or no employment. For everybody sees the gains which are made by A's tradesmen, servants, and others, while his money is spending. B's savings, on the contrary, pass into the hands of the person whose stock he purchased, who with it pays a debt he owed some banker, who lends it again to some merchant or manufacturer; and the capital, being laid out in hiring spinners and weavers, or carriers and the crews of merchant vessels, not only gives immediate employment to as much industry at once as A. employs during the whole of his career, but coming back with increase by the sale of the goods which have been manufactured or imported, form a fund for the employment of the same and perhaps a greater quantity of labour in perpetuity. But the careless observer does not see, and therefore does not consider, what becomes of B's money; he does see what is done with A's; he observes the amount of industry which A's profusion feeds: he observes not the far greater quantity which it prevents from being fed: and thence the prejudice, universal to the time of Adam Smith, and even yet only exploded among persons more than commonly instructed, that prodigality encourages industry, and parsimony is a discouragement to it. The common argument against free-trade is a fallacy of the same nature. The purchaser of British silk encourages British industry; the purchaser of Lyons silk encourages only French; the former conduct is patriotism, the latter ought to be interdicted by law. The circumstance is overlooked, that the purchaser of any foreign commodity of necessity causes, directly or indirectly, the export of an equivalent value of some English article (beyond what would otherwise be exported), either to the same foreign country or to some other; which fact, although from the complication of the circumstances it cannot always be verified by specific observation, no observation can possibly be brought to contradict, while the evidence of reasoning upon which it rests is absolutely irrefragable. The fallacy is, therefore, the same as in the preceding case, that of seeing a part only of the phenomena, and imagining that part to be the whole; and may be ranked among Fallacies of Non-observation."

Mr. Mill ranks the acceptance of false and the rejection of just arguments, from analogy, among the fallacies of generalization; we incline to think that many of them may be referred to ambiguity of words. Take the following example in the 'Easy Lessons':—

"There is an analogy in many respects between all 'valuable-Articles' that Man uses; as Corn, and iron or lead, and again (what are called the precious metals) gold and silver. And as an increased supply of *most* of these articles, while it lowered their *price*, would not diminish their *usefulness*, and would thus prove a general benefit, some might infer that this would hold good in respect of gold and silver. If the earth should yield two bushels of corn, or two tons of iron or lead, for one that it now yields, these articles would be much cheaper, while a bushel of corn would be as useful in feeding us, as now: and so with most other articles. But if the supply of gold or silver were thus doubled, the chief *use* of these being for *coin*, and the utility of coin *depending on its value*, the only important change would be, that a sovereign or a shilling would be twice as large as now; and therefore twice as cumbrous. So that no advantage would result."

Here it would seem to us that the error arises from confounding inherent with exchangeable value. The distinction between the two was practically illustrated by Sindbad in the valley of diamonds, when he abandoned all the precious stones to seize on the carcase of a sheep.

Mill's Sixth Book treats of the application of Logic to the Moral Sciences; in this portion of his work, he has been obliged of necessity to enter on subjects connected with social rather than scientific controversies; on these points, his views are expressed with great force and clearness, and his illustrations exhibit a grasp of intellect and a range of information, such as M. Comte has alone rivalled amongst modern writers. We shall not enter upon this enticing division of the work, for every page is rife with matter which would require several distinct dissertations, but we cannot take leave of Mr. Mill, without expressing our gratification at meeting, in this age of plagiarism, a work of original thought, deserving to take rank with the immortal works of Locke and Bacon.

The Correspondence of Burns and Clarinda. Edinburgh, Tait.

This collection of letters had been long known to exist, and had been sought by Mr. Cunningham to complete his edition of the Life and Works of Scotland's greatest poet. The history of the papers is given by the editor of the present volume, Mr. W. C. M'Lehose, the grandson of Clarinda. This account, containing nothing striking, is followed by a memoir of the lady, who has obtained a celebrity by the connexion of her name with that of Burns. Her history is a melancholy but a common one. She made a sentimental marriage early in life; the god of her idolatry turned out a bad husband; he led a dissipated life, and terminated it in the West Indies, leaving his widow ill provided for, and burthened with the charge of a young family. The friendship, however, or the Platonic attachment of Mrs. M'Lehose and Burns, commenced in the lifetime of her worthless husband. Their first meeting, the mutual impressions produced, and the origin of the letters, are told in a few words:—

"Towards the end of the year 1787, Robert Burns was introduced to Mrs. M'Lehose, in the house of a mutual friend, Miss Nimmo. They spent the evening together; and we have the sentiments recorded by both parties of the impressions reciprocally produced. The poet declared, in one of his letters to her, 'Of all God's creatures I ever could approach in the beaten way of friendship, you struck me with the deepest, the strongest, the most permanent impression.' While she wrote:—'Miss Nimmo can tell you how earnestly I had long pressed her to make us acquainted. I had a presentiment that we would derive pleasure from the society of each other.' The poet was at this time preparing to depart from Edinburgh; and, under these circumstances, could only regret that he had not possessed the opportunity of cultivating the lady's acquaintance earlier; but a severe accident, which happened a day or two later, when he was engaged to spend the evening with her, delayed his departure for some time, and led to a correspondence, in which Mrs. M'Lehose fancifully adopted the name of 'Clarinda,' and Burns followed up the idea by signing 'Sylvander.' As soon as he recovered from his accident, the poet visited the lady, and they enjoyed much of each other's society for several months, till he left Edinburgh. They met only once afterwards, in the year 1791,—but occasionally corresponded till within a short period of his death."

We shall give one more extract from the memoir—a sketch of Clarinda's person and social character, essential points in the *historiette* of a sentimental *liaison*:—

"Of Mrs. M'Lehose's appearance in early life, it has already been recorded that she was considered one of the beauties of Glasgow. The editor's personal recollection does not extend beyond her middle life. She was short in stature; her hands and feet small and delicate; her skin fair, with a ruddy colour

Digitized by Google

in her cheeks, which she retained to the end of her life; her eyes were lively, and evinced great vivacity; her teeth well formed, and beautifully white; her voice was soft and pleasing. Mrs. M'Lehose's perceptive talents were not so good as her powers of reflection. Her judgment was often misled by her imagination, or biassed by the keenness of her feelings; but she read much; and having an excellent memory, and exercising sound reflection, she made the knowledge thus acquired her own. Her observation on the world around her was constant and acute, and she formed a true appreciation of her own position. But her sensitiveness was too great; her natural vivacity was strong, and when she gave full play to it in society next day's reflection made her construe slight deviations, on her own part especially, and sometimes in others, into grave offences, for which she felt undue regret. She was very fond of society, and took a lead in it from her vivacity and ready wit; but when there were many strangers, she kept it in the background. It seemed to require the fostering encouragement of those who had already shown an appreciation of her conversational powers to excite her to the exercise of them. For thirty or forty years, it is believed she was in company five days out of seven; and when later years thinned the ranks of her friends, and diminished the number of her invitations, it was with great difficulty she became reconciled to a more retired mode of life. As her feelings were naturally strong, so were her attachments. She always considered ingratitude as one of the basest of sins. She would have been a devoted wife, had it not been her misfortune to be united to a man utterly incapable of appreciating her, or of affording her happiness."

The perusal of the correspondence inclines us to think that it has been sought for with more eagerness than the letters are worth. At any rate, the share that Burns had in them, will not add to his literary reputation. Many of our poets have been eminent in prose composition, for instance Pope, Addison, Swift, Gray, and particularly Dryden. Few moderns, however, except Southey, have excelled in both prose and rhyme. Scott is scarcely a fair instance, for his fame rests upon his prose far more than on his poetry, and his best poetry is found in his prose works. Of our living poets, not one can be said to write English prose with the hand of a master. But to return to Burns, he has left but little prose except his letters, and the natural charm of his poetry would lead us to expect a similar ease and grace in his epistolary style. On the contrary, we find his letters strikingly deficient in the points which constitute the chief excellence of letter-writing. We have here a collection of his love-letters, where, at least, we might expect to meet with the simplicity of language appropriate to the expression of deep feeling. But it is not so; he is generally strained, elaborate, high-flown, artificial, affected. In writing a note to Clarinda, he is thinking of sustaining the reputation of the author of 'Saturday Night' and 'Tam O' Shanter.' Sylvander must say nothing of Burns, and the consequence is, that Sylvander has little or nothing of what renders Burns so fascinating and so popular.

Here is Sylvander's third letter. (By the bye, a name is wanting for the letters that pass between the parties to a Platonic affection):—

"I stretch a point, indeed, my dearest Madam, when I answer your card on the rack of my present agony. Your friendship, Madam! By heavens, I was never proud before. Your lines, I maintain it, are poetry, and good poetry; mine were, indeed, partly fiction, and partly a friendship which, had I been so blest as to have met with you *in time*, might have led me—God of love only knows where. Time is too short for ceremonies. I swear solemnly, (in all the tenor of my former oath,) to remember you in all the pride and warmth of friendship until—I cease to be!"

In a subsequent epistle we find the passage that follows:—

"To meet with an unfortunate woman, amiable and young, deserted and widowed by those who were bound by every tie of duty, nature, and gratitude, to protect, comfort, and cherish her; add to all, when she is perhaps one of the first of lovely forms and noble minds, the mind, too, that hits one's taste as the joys of Heaven do a saint—should a vague infant idea, the natural child of imagination, thoughtlessly peep over the fence—were you, my friend, to sit in judgment, and the poor, airy straggler brought before you, trembling, self-condemned, with artless eyes, brimful of contrition, looking wistfully on its judge, —you could not, my dear Madam, condemn the hapless wretch to death 'without benefit of clergy'?"

To this plea, there is no replication by Clarinda, at least on the record. But she probably expressed some slight displeasure, for Burns says, in his next letter—

"I believe there is no holding converse, or carrying on correspondence with an amiable woman, much less a *gloriously-amiable fine woman*, without some mixture of that delicious passion, whose most devoted slave I have, more than once, had the honour of being. But why be hurt or offended on that account? Can no honest man have a prepossession for a fine woman, but he must run his head against an intrigue! Take a little of the tender witchcraft of love, and add it to the generous, the honourable sentiments of manly friendship, and I know but one more delightful morsel, which few, few in any rank ever taste. Such a composition is like adding cream to strawberries: it not only gives the fruit a more elegant richness, but has a peculiar deliciousness of its own."

The lady's views of the matter were pretty much the same. Clarinda observes—

"You say, 'there is no corresponding with an agreeable woman without a mixture of the tender passion.' I believe there is no friendship between people of sentiment and of different sexes, without a *little* softness; but when kept within proper bounds, it only serves to give a higher relish to such intercourse. Love and Friendship are names in every one's mouth; but few, extremely few, understand their meaning. Love (or affection) cannot be genuine if it hesitate a moment to sacrifice every selfish gratification to the happiness of its object. On the contrary, when it would purchase that at the expense of this, it deserves to be styled, not love, but by a name too gross to mention. Therefore, I contend, that an honest man *may* have a friendly prepossession for a woman whose soul would abhor the idea of an intrigue with her."

Her admiration of Burns evidently betrayed her into copying the faults of his prose composition, for, in the same letter, she breaks forth in this floral strain:—

"Now and then, I am favoured with a salutary blast of 'the north wind of Prudence.' The southern zephyrs of Kindness, too, often send up their sultry fogs, and cloud the atmosphere of my understanding. I have thought that 'Nature' threw me off in the same mould just after you. We were born, I believe, in one year. Madam Nature has some merit by her work that year. Don't you think so? I suppose the carline has had a flying visit of Venus and the Graces; and Minerva has been jealous of her attention, and sent Apollo with his harp to charm them away."

In her next note, there is this affecting allusion to the lone situation which caused her to yearn for such a friend as Sylvander:—

"At this season, when others are joyous, I am the reverse. I have no *near* relations; and while others are with theirs, I sit alone, musing upon several of mine with whom I used to be—now gone to the land of forgetfulness."

And she sends him the following verses of her own rhyming:—

Talk not of Love! it gives me pain—
For Love has been my foe:
He bound me in an iron chain!
And plunged me deep in woe!

But Friendship's pure and lasting joys
My heart was form'd to prove—
The worthy object be of those,
But never talk of Love.

The "Hand of Friendship" I accept—
May Honour be our guard!
Virtue our intercourse direct,
Her smiles our dear reward!

Burns found fault with the rhyme in the second stanza, and proposed to alter them as follows:—

But Friendship's pure and lasting joys
My heart was form'd to prove:
There, welcome win and wear the prize,
But never talk of Love.

From this it is plain that Sylvander was wont to pronounce "prize" as if it was written "proize": otherwise he might have let Clarinda's rhyme stand.

The subject of religion occupies not a little space in this tender correspondence. Clarinda was a Calvinist, and deplores the aversion of Burns to that creed:—

"One thing alone hurt me, though I regretted many—your avowal of being an enemy to Calvinism. I guessed it was so by some of your pieces; but the confirmation of it gave me a shock I could only have felt for one I was interested in. You will not wonder at this, when I inform you that I am a strict Calvinist, *one or two* dark tenets excepted, which I never meddle with. Like many others, you are so, either from never having examined it with candour and impartiality, or from having unfortunately met with weak professors, who did not understand it; and hypocritical ones, who made it a cloak for their knavery. Both of these, I am aware, abound in country life; nor am I surprised at their having had this effect upon your more enlightened understanding. I fear your friend, the captain of the ship, was of no advantage to you in this and many other respects."

Here is what Sylvander replies to the fair enthusiast:—

"I am delighted, charming Clarinda, with your honest enthusiasm for religion. Those of either sex, but particularly the female, who are lukewarm in that most important of all things, 'O my soul, come not thou into their secrets!' I feel myself deeply interested in your good opinion, and will lay before you the outlines of my belief:—He who is our Author and Preserver, and will one day be our Judge, must be,—not for his sake, in the way of duty, but from the native impulse of our hearts,—the object of our reverential awe and grateful adoration. He is almighty and all-bounteous; we are weak and dependent: hence prayer and every other sort of devotion. 'He is not willing that any should perish, but that all should come to everlasting life': consequently it must be in every one's power to embrace His offer of 'everlasting life'; otherwise he could not in justice condemn those who did not. A mind pervaded, actuated, and governed by purity, truth, and charity, though it does not merit heaven, yet it is an absolutely-necessary prerequisite, without which heaven can neither be obtained nor enjoyed; and, by Divine promise, such a mind shall never fail of attaining 'everlasting life': hence the impure, the deceiving, and the uncharitable exclude themselves from eternal bliss, by their unfitness for enjoying it. The Supreme Being has put the immediate administration of all this—for wise and good ends known to himself—into the hands of Jesus Christ, a great Personage, whose relation to Him we cannot comprehend, but whose relation to us is a Guide and Saviour; and who, except for our own obstinacy and misconduct, will bring us all, through various ways and various means, to bliss at last."

In the self-same letter, it is thus written; so easily does religious fervor in the mind of a Sylvander blend itself with warmth of an earthly kind:—

"Oh, thou perfidious, cruel, mischief-making demon, who presidest o'er that frantic passion,—thou mayest, thou dost poison my peace, but shalt not taint my honour! I would not for a single moment give an asylum to the most distant imagination that would shadow the faintest outline of a selfish gratification at the expense of *her*, whose happiness is twisted with the threads of my existence. May she be happy, as she deserves! And if my tenderest, faithfullest friendship can add to her bliss, I shall at least have one solid mine of enjoyment in my bosom! *Don't guess at these ravings.*"

And, at the close—

"You are by this time fast asleep, Clarinda; may good angels attend and guard you as constantly and as faithfully as my good wishes do!

Digitized by Google

"Beauty which, whether waking or asleep,
Shot forth peculiar graces."

We find the lady declaring in her next letter, "I have been *puzzling my brain* about the fair one you bid me not guess at!" And she adds, I first thought it your Jean, but I don't know if she now possesses your 'tenderest, faithfullest friendship.'" This proves the extreme simplicity of Clarinda.

There are touches in these letters, which show that they could not have been written in any city of Europe but "auld" Edinburgh:—

"I am certain I saw you, Clarinda, but you don't look to *the proper storey for a poet's lodging*,

Where Speculation roosted near the sky.

I could almost have thrown myself over for very vexation. *Why didn't you look higher?*"

Clarinda might have answered, that the neck of the human frame is not formed for looking as high as the poet's flat in the ancient streets of Edinburgh, where, in truth, it seems but one step from the attic story to the "threshold of Jove's court." Her reply, however, is characteristic enough. "My eye soared to poetic heights, *alias* garrets, but not a glimpse of you could I obtain. You surely was within the glass at least. I returned, finding my intrinsic dignity a good deal hurt, as I missed my friend. Perhaps I shall see you again next week. *Say how high you are.*"

It might have been difficult for Burns to say "how high he was" in the Titan-like mansions of Edina. At least a considerable degree of arithmetical talent might have been requisite. It seems to be beyond doubt that the *liaison* between Burns and Mrs. M'Lehose never outstepped the frontier of virtue, but their correspondence confirms the general opinion of the danger of such treaties of friendship between enthusiasts of different sex. Burns was not formed by nature for the Platonic school; he keeps himself with difficulty within philosophic bounds:—

"Clarinda, may I reckon on your friendship for life? I think I may. Thou Almighty Preserver of men! Thy friendship, which hitherto I have too much neglected, to secure it shall, all the future days and nights of my life, be my steady care. The idea of my Clarinda follows:—

Hide it, my heart, within that close disguise,
Where, mix'd with God's, her loved idea lies.

But I fear inconstancy, the consequent imperfection of human weakness. Shall I meet with a friendship that defies years of absence and the chances and changes of fortune! Perhaps 'such things are.'"

Hear Clarinda in answer; her virtue entrenches itself behind the following rampart of allegory:—

"Sylvander, the moment I waked this morning, I received a summons from Conscience to appear at the Bar of Reason. While I trembled before this sacred throne, I beheld a succession of figures pass before me in awful brightness! Religion, clad in a robe of light, stalked majestically along, her hair dishevelled, and in her hand the Scriptures of Truth, held open at these words—'If you love me keep my commandments.' Reputation followed: her eyes darted indignation, while she waved a beautiful wreath of laurel, intermixed with flowers, gathered by Modesty in the Bower of Peace. Consideration held her bright mirror close to my eyes, and made me start at my own image! Love alone appeared as counsel in my behalf. She was adorned with a veil, borrowed from Friendship, which hid her defects, and set off her beauties to advantage. She had no plea to offer, but that of being the sister of Friendship, and the offspring of Charity. But Reason refused to listen to her defence, because she brought no certificate from the Temple of Hymen! While I trembled before her, Reason addressed me in the following manner:—Return to my paths, which alone are peace; shut your heart against the fascinating intrusion of the passions; take Consideration for your guide, and you will soon arrive at the Bower of Tranquillity."

She then "drops her metaphor," and adds in plain language that she is neither "well nor happy." But we think we have given specimens enough of this collection of letters, though perhaps we have not quoted the passages which may be considered as most instructive in the way of admonition. Much allowance is to be made for a lively and imaginative young woman in Mrs. M'Lehose's situation, without parents, guardians, or near relatives, and with a profligate husband in Jamaica. The time is also to be taken into consideration, for even in Scotland there was more social licence half a century since than there is at the present day. We have no doubt but that the loves of Clarinda and Sylvander ended, as they began, with Plato; but we are equally satisfied that Plato is nearly as dangerous as Cupid in all such cases, and the perils of such a correspondence seem to be rather increased than diminished by the intellectual, and even by the religious complexion it occasionally assumes. The fear is that the pursuits of literature and the effusions of piety, are unconsciously used by Clarindas and Sylvanders as masks to conceal the more usual aims of shepherds and shepherdesses. We are suspicious of poetical flirtations, and still more of sanctimonious gallantries. Burns's Clarinda was a woman of sense as well as of sensibility; she was under heavy moral responsibilities as the mother of a young family, and she navigated in safety a sea where most women would have suffered shipwreck; her death took place so recently as 1841, and it appears that she enjoyed to the last the respect of a numerous acquaintance; but still we think her story of more use as a warning, than as a precedent to her sex. There was but one Minerva in the skies, and there are not many Clarindas upon earth.

The System of Late Hours in Business. By A. J. King. Aylott.—*Hours of Business.* By E. Flower. Aylott.—*Prize Essay on the Evils which are produced by Late Hours of Business.* By T. Davis. With a Preface, by the Hon. and Rev. B. W. Noel.—*Publications of an Association for bringing about an Abridgment of the Hours of Business.* Nisbet & Co.

Whatever may be the difference of opinion on political, one only can exist as to the eligibility of domestic reforms. Overt evils, being public and visible, are daily the theme of vehement declamation, but those which are unseen and deep-seated are of a more serious character, and would, if properly understood, plead hourly "trumpet tongued;" since not a minute passes but their operation is felt, and their consequences entailed. But men neglect the affairs which come home to their own business and bosoms, while joining in popular outcries against abuses of larger pretensions and greater bulk, though, in their agency less intense, and individually less poignant. Yet is society composed of individuals, and the whole must share in the sufferings of each. Nay, the very public evil itself so loudly denounced, is but the external symptom of that internal and insidious disease, which is paralyzing one function and organ after another, until the whole body sinks under its repeated ravages, and dissolution is inevitable.

It is now a quarter of a century since an English philosopher exclaimed, on the subject of the proportion of time engaged in business, "The man who subjects me to twelve hours toil in the day, makes my soul a slave, and condemns me to perpetual ignorance." This truth, however, like others, greater and less, was not generally received on its first announcement, but needed several years for its influence to grow and become operative. Many theorists have since taken up the argument, and discussed it with various degrees of skill; Parliament, also, in relation to factory children, has condescended to look into the matter; and now the subject seems to demand serious consideration in its remoter applications, as involving an eminently practical principle of universal importance.

Twelve hours a day! said the philosopher, while one of the pamphlets before us says "fourteen, fifteen, or perhaps sixteen, hours a day," is the doom of the youth who is introduced to certain houses of business, with the understanding that he shall "make himself generally useful." Mr. Davis enters into particulars:—

"On busy days, and during nearly the whole of the spring and former part of the summer, it is often found to be impossible to leave the shop within *one, two, or three hours after it has been closed.* So that during a large part of the year, it is a common thing for these young men to be pent up in the shop from *six or seven o'clock in the morning until ten or eleven at night.* This is a description of the present mode of carrying on business, as it appears in the most favourable aspect. The far larger number of shops, which are frequented chiefly by the middle and working classes, are kept open until *nine or ten o'clock in the winter, and ten or eleven in the summer.* So that it frequently happens that the young men are employed from *seven o'clock in the morning until twelve at night;* that is for a period of *seventeen hours* out of the twenty-four! On Saturdays the time for closing (as if in mockery of a 'preparation for the Sabbath') is *in all cases later.* In many shops the young men are often unable to retire to rest until *one or two o'clock in the Sunday morning.*"

Now this is the case, we believe, fairly stated, but in outline only. Apparently minor evils compose the filling in, items of exceeding bitterness. Cooped up in a little elevated box, or perched upon a high stool, or standing behind a counter, where every inch of space is economized for the stowage of goods, in an unventilated shop lighted with gas, with scarcely time allowed for meals—prohibited from reading or conversation, even during the idle portion of the day—the poor victim passes a weary time waiting for employment, "in a state of painful and unnatural constraint, varied and relieved only by the actual occupation with customers, which consumes not more than half the hours which are daily devoted to business."

Daily! day after day—week after week—month after month—year after year—heavens! a moral and intellectual being thus occupied—thus trained from the age of thirteen or fourteen upwards!

We are not surprised at finding, that, under these circumstances, the mortality among this class of men is greater than in the most dense and poverty-stricken masses in the manufacturing districts. Morality, intellect, and religious feeling have suffered death even earlier.

This monster-evil is of modern growth. The old citizen was accustomed, at four o'clock, to quit his shop, which was left in charge of a mere lad, till about five or six, and then closed for the night. Fortunes were made nevertheless, and the public convenience as well provided for as now. The amount of buying and selling in a day is not dependent on Late Hours. The time now lost in the morning, under a better system, would be saved at night. The object should be "to compress the labour of the day into so many *consecutive* hours as shall suffice for their due performance—to redeem the extra time, which is absolutely wasted in unemployed attendance at the counter, and to devote that time to the bodily and spiritual health of man, without trenching upon the duties, and obligations, and reasonable requirements of the shop."

So far the question is one merely touching the Economy of Time in matters of Business: and so far we can go along with the advocates and claimants of Early Hours. But there is

Digitized by Google

unfortunately, such a tendency to Cant in this same world "of beggarly elements," that associations are already started for bringing about a better state of things, and joint-stock companies proposed for turning assistants into masters, and partakers in the working of a large capital. Here begins the liability to great abuses. Individuals, too, should beware how they seek leisure, whether for moral or intellectual *luxuries*. The privilege sought is claimed too much as a right, and too little is said of the correlative duty. Besides, the hardship is stated in too exclusive a form. The shopman and assistant seem to forget that the lecturer they wish to hear is working during the very hour of their proposed leisure, and had worked for days, perhaps years, by night and day, to qualify himself for the office. Many a man of letters works harder than the shopman-slave. There is too both moral and intellectual task-work; moral and intellectual drudgery; labour which no man would undertake but for the sake of money. Persons high in rank and station have no immunity from this. The Judge and Chancellor on the bench are frequently compelled "to take home papers" to consider their bearings on the case, at over-hours. The senator frequently performs his duties from evening till far beyond midnight in the houses of parliament, after having undergone the fatigues of many interviews in the course of the day, or perhaps labouring for hours "in committee." The evil complained of, then, is not confined to the class of persons who are now claiming redress. But it is a great and general "Fact," (to use a favourite phrase of the day) that Man, through all the scales of humanity, is expending life in the pursuit of the means of living. True, the shopman risks and loses his health—and what is worth more than health in his peculiar occupation? But how many are the altogether unemployed who are dying from the want of occupation? To have an occupation is a privilege, the greatest privilege that a man, whether rich or poor, can possess. Yes, and both with rich and poor, Work will have its Martyrs too; those voluntary, these compulsory. A price must be paid, a sacrifice incurred, for this inestimable privilege. If the claims now making originate in a disinclination to self-sacrifice in the path of duty, not only is the motive unworthy, but the proposed end will be unattainable. If they are made on economical grounds, so as to preserve within its due limits the necessary self-denial, and to prevent a wasteful expenditure of energy, they will be justified in their origin, and crowned with triumph in their results. With these words of caution, we leave the subject for the present; but shall nevertheless fix our attention on the progress of the practical measures that may be taken in relation thereto.

Memoirs of Admiral the Earl of St. Vincent.

[Third Notice.]

STRIKING contrasts in character form the great charm of biography; and it is amusing to see St. Vincent in what he, doubtless, considered an amiable, if not playful, mood. Capt. Darby, who distinguished himself at the Nile, had imprudently expressed much vexation at not being sent to England after that battle, and in terms which amounted almost to insubordination. His remarks having reached the admiral's ear, he was obliged to bring Darby to a sense of his duty. As Mr. Tucker vouches for the truth of the following anecdote, it is our duty to believe it; but we may be permitted to think that some of the details exhibit the touching-up of a clumsy artist, who cannot "let well alone":

"There happened to be a grand dinner at the General's, at which the Commander-in-chief and several of the 'Nile heroes' were present, and Lord St. Vincent was, as usual, very marked in his graciousness to Captain Darby. When they separated at night, his Lordship retired to his house at Rosia, and Captain Darby to his ground-floor lodging, near the Mole Jetty, to which the Bellerophon was lashed. But not long after he had fallen asleep, he was awakened by a tapping at his window. Annoyed at being so soon roused, he gave a very gruff repulse to the disturber; but as the knocking provokingly continued, he was at length compelled to ask, 'Who's there?' and the voice was Lord St. Vincent's, which said, 'It is I—it is I, my dear Darby; get up, I have something to say to you.' 'Oh, my Lord, is it you?' drawled out the Captain, 'why, we have only just parted!' 'I know that, Darby; but I am always thinking of you; and I have had a dream about you, which I must tell you, for till I have told it I cannot rest; so get up, and come over to the window and hear it.' 'Well, my Lord, I hope it is a short one, for I am uncommonly sleepy.' The window being opened, and Captain Darby, in only his nightcap and shirt, standing on the inside, Lord St. Vincent, in full dress uniform, bending in from the outside, his Lordship proceeded:—'Darby, I dreamt I was looking on at the battle of the Nile, and, of all our ships, the Bellerophon most attracted my admiration. I saw her alongside the mighty L'Orient, nobly supporting a conflict quite unrivalled in our naval history; and then I exclaimed, "Look at Darby, there! what a fine, gallant fellow he is! what a matchless hero!" and, Darby, I dreamt that I watched you there, obstinately continuing that unequal fight, till, two of your lieutenants being killed, and two hundred of your crew killed or wounded, I saw yourself knocked down by a splinter, and the Bellerophon drifting past her enormous opponent; and then I said, "What an incomparable hero that Darby is! how proud I am of the choice I made of him! how greatly will England approve of my selection!" After that, Darby, my dream changed, and I was here again on the Rock, and some one told me that when, instead of going to England, you received my orders to repair your ship here, you said, "It was quite impossible, for there are not enough shipwrights on the Rock; that it is notorious she can hardly swim; that people said a post-chaise might go through her; and that you did not know who would fight the battles of the country, if, after fighting as your fellows had, they were to be sent to sea to be drowned for it afterwards!" and I replied, "Why, surely it cannot be the gallant Darby who has said all this! is *he* turned chicken-hearted? I can't believe it—'tis impossible!"' Starting with impatience, Captain Darby exclaimed, 'Good God! my Lord, what do you mean by such a term?' 'But,' continued his Lordship, calmly, 'remember, this is only my dream, Darby. Yet they told me, that you not only said all this among the officers of the squadron, but at the army messes too, and moreover they mentioned who had heard you; and I was indeed astonished and grieved! But then, Darby, my dream again changed, and I thought I was at a court-martial, *and, Darby, do you know, it was your sword lay on the table!* Now, remember, this was only my dream, Darby, but, now I have told it to you, I hope I shall be able to rest, so good night!' And, shutting the window, away his Lordship went, leaving Captain Darby no longer sleepy. On the following day a large party dined with Lord St. Vincent, but Captain Darby, who either had not quite recovered from the loss of sleep, or not forgiven the disturbance, was unusually silent, keeping at a ceremonious distance from his Lordship. This did not escape Lord St. Vincent's observation. 'Where's Darby?' he called out during dinner. 'Why, Darby, you appear out of spirits; now, that's my dream you're thinking about: come, let's have a glass of wine together.' 'Indeed, my Lord St. Vincent,' replied the Captain, filling his glass, 'there's no knowing where to have your Lordship; for you have a tongue like a cow.' And, while all were astonished at the temerity of the answer—'How so? how so, Darby?' 'Because, my Lord, you have a rough and a smooth side to it.' 'Ah, Darby,' replied his Lordship, 'you're always playing off your jokes on me; but never mind, it was only a dream. Here's to you, Darby.'"

As we dislike scriptural parodies, we refrain from giving another anecdote of this sea lion's gambols, which Mr. Tucker relates (Vol. I. p. 391), though it has, we confess, entertained us.

St. Vincent was, and, in our opinion, very judiciously, strict in requiring officers to wear their proper uniforms—a practice of which he set a rigorous example; but in days when buckles have long disappeared from shoes, a general order reprimanding officers for coming on board the flag ship "*with strings in their shoes*," will excite a smile.

But shoe-strings, instead of buckles, are not the only innovations which time, fashion, and the progress of knowledge have made upon St. Vincent's ideas. Let our naval readers, who think such enormous frigates as the *Warspite*, *Vindictive*, *Alfred*, and others of their class, the pride of the navy, wonder at the admiral's opinion, that "frigates were grown preposterous" when there were none larger than the old forty-fours.

Our next extracts shall present St. Vincent as a "preux chevalier;" and perhaps the brightest days of Chivalry never produced two more graceful and generous epistles. The "knight of superior prowess," mentioned in the first of these letters, was Nelson:—

"*To Lady Hamilton.*

"H.M.S. Ville de Paris, Cadiz, 22nd of May, 1798.

"Madam,—I feel myself highly honoured and flattered by your Ladyship's charming letter of the 15th April. The picture you have drawn of the lovely Queen of Naples and the Royal Family, would rouse the indignation of the most unfeeling of the creation, at the infernal designs of those devils, who, for the scourge of the human race, are permitted to govern France. I am bound, by my oath of chivalry, to protect all who are persecuted and distressed, and I would fly to the succour of their Sicilian Majesties, were I not positively forbid to quit my post before Cadiz. I am happy, however, to have a knight of superior prowess in my train, who is charged with this enterprize, and will soon make his appearance, at the head of as gallant a band as ever drew sword or trailed pike. Your true knight, and devoted humble servant,

"ST. VINCENT."

"*To the Marquis de Niza.*

"H.M.S. Ville de Paris, in the Tagus,
"1st of December, 1798.

"After the many gracious marks of favour and kindness I have received at the hands of His Royal Highness, the Prince of Brazils, through the obliging intercession of his ministers, nothing short of the present occasion could influence me again to intrude upon His Royal Highness. Monsieur Durepaire, late an officer in the Regiment Montemar, of the brave Garde de Corps, who so nobly and gallantly preserved for a time the sacred life of the Queen of France, by falling, covered with wounds, in defending the door of Her Majesty's ante-chamber, at Versailles, when attacked by a band of ruffians, hired by the Duke of Orleans to assassinate the King and Queen, is, by a reform the ministers of Great Britain have judged necessary to make in the army, reduced to a pittance barely sufficient to carry him out of the kingdom of Portugal,—his cause must interest the feelings of every gentleman in Europe, and I am ready and willing to settle an annuity upon him out of my private fortune. I have the honour to be, &c. ST. VINCENT."

The wretched state of Lord St. Vincent's fleet, in January, 1799, is shown by the annexed pithy letter to the secretary of the Admiralty, which accounts for and fully justifies the indignation he felt at the mismanagement and abuses of the Navy Board:—

"My dear Nepean,—We are literally without a fathom of rope, yard of canvas, foot of oak or elm plank, board or log to saw them out of; we have not a bit of iron but what we draw out of condemned masts and yards, nor the smallest piece of fir plank, board or quarter stuff, but what they produce; and the last large stick was wrought into a topmast for the Thalia yesterday. Add to this, that three fourths of the ships under my command are so much out of repair and shaken, that, were they in England, no one would go to sea in them—and you will feel for your friend, "ST. VINCENT."

A remarkable letter from Lord Nelson proves that some neglect or discourtesy on the part of the Admiralty—from which many zealous ad-

Digitized by Google

mirals, including the haughty St. Vincent and the patient Collingwood, have so often suffered—had greatly ruffled the hero's mind, in March, 1799:

"March 2nd, getting under sail.

"My dear Lord,—I am always happy when my conduct meets your approbation: and whilst I remain in the service, my utmost exertion shall be called forth; but, although, I own, I have met with much more honour and rewards than even my most sanguine ideas led me to expect, yet I am so circumstanced, that this expedition will probably be the last service ever performed by your most obliged and affectionate friend,

"Nelson and Bronte."

The temptation of bringing the warm-hearted, generous letters of Nelson to broad daylight after being so unaccountably buried in private collections for forty years, is irresistible. The public subscribe to build a column to his memory, yet there is not an eminent publisher in London (and we speak from knowledge) who has spirit enough to allow Nelson to erect his *own* monument to posterity—without the fear of being caricatured by some incompetent architect, or some jobbing committee—by printing a collection of his letters and dispatches as a companion to those of Wellington. Were two more genuine, natural, gratifying addresses to a chief from a distinguished follower ever written than the following?—

"Palermo, June 10, 1799.

"My dear Lord,—We have a report that you are going home. This distresses us most exceedingly, and myself in particular—so much so, that I have serious thoughts of returning, if that event should take place. But, for the sake of our country, do not quit us at this serious moment! I wish not to detract from the merit of whoever may be your successor, but it must take a length of time, which I hope the war will not give, to be in any manner a St. Vincent. We look up to you, as we have always found you, as to our father, under whose fostering care we have been led to fame. If, my dear Lord, I have any weight in your friendship, let me entreat you to rouse the sleeping lion. Give not up a particle of your authority to any one: be again our St. Vincent, and we shall be happy! Your affectionate Nelson."

"June 19th, 1799. Nine o'clock at night.

"My dear Lord, our St. Vincent,—What have we suffered in hearing of your illness, and of your return to Mahon! Let me entreat you to come to us with a force fit to fight. We will search the French out, and if either in Leghorn, Espezia, or Naples, we will have at them; we shall have so much pleasure in fighting under the eye of our ever great and good Earl. If you are sick, I will fag for you, and our dear Lady Hamilton will nurse you with the most affectionate attention. Good Sir William will make you laugh with his wit and inexhaustible pleasantry. We all love you. Come, then, to your sincere friends. Let us get you well, it will be such a happiness to us all—amongst the foremost, to your attached, faithful, and affectionate Nelson."

The impaired state of Lord St. Vincent's health having compelled him to resign the command of his fleet, he returned to England and struck his flag in August, 1799. At the urgent request of the ministry, he assumed the command of the Channel fleet, in consequence of fears of another mutiny in 1800, though he was then labouring under dropsical symptoms. "The king and the government require it, and the discipline of the English Navy demands it: it is of no consequence to me whether I die afloat or ashore, the die is cast," was the observation with which he silenced his physician's remonstrances. His reputation as a disciplinarian made this appointment very unpopular; and that common failing of strong minds, of carrying a line of conduct to extremes when resisted, was stimulated by his having heard that the superior officers of the fleet had resolved that "the discipline of the Mediterranean should not be introduced into the Channel fleet." Certain it is, however, that no officer was ever more disliked, than Lord St. Vincent while he held that important office; but it is no less certain, that England and the profession were greatly benefited by his iron rule. Its best feature was impartiality. If the common seaman was debarred from recreation in port, so were the officers and captains; and if unusual duties were imposed upon the latter, it was to enforce sobriety and order, and thereby save the thoughtless sailor from dreadful corporeal punishment. St. Vincent's orders and letters for enforcing subordination and discipline at this period, are remarkable, and ought to ensure respect alike for his justice, his zeal, and his indefatigable attention to the health of his seamen. We had marked numerous passages all redounding to his honour, but, even if our limits admitted of their insertion, we do not think that such details would interest general readers.

In Mr. Addington's administration, Lord St. Vincent accepted the office of First Lord of the Admiralty, when he carried many of his plans of *Reform*. His audience of the King, as described by Mr. Tucker, exhibits him in a very favourable light, as the advocate of a concession of the Catholic claims when that measure had horrors for Royal ears:—

"Having expressed his duty and thanks to His Majesty for his condescension and favour, and having entreated that His Majesty would allow him to express his opinion freely upon a subject which he was most desirous to mention, and to which the King very readily assented, he said, 'that he should make but a bad return for all the honours and favours which His Majesty had most graciously bestowed upon him, and very ill discharge his duty, if he did not frankly and honestly tell His Majesty, that, having served nearly half a century with the Roman Catholics, and seen them tried in all situations, it was his decided and conscientious opinion, that they were entitled to be placed upon the same footing in every respect as His Majesty's Protestant subjects; that he had been informed that the retiring ministry had resigned upon that question, and that he could not accept office under such circumstances, without first stating to His Majesty, that upon his honour and upon his allegiance, he entirely agreed with them in opinion; that having now discharged this duty to His Majesty and to himself, he would also add, that his life and his utmost services were at His Majesty's disposal, and that he was ready to return to the fleet, or to serve His Majesty on shore, or to retire into private life, as His Majesty might think proper to command;' that the King listened very attentively to all he said, and when he had finished, that His Majesty replied:—'Lord St. Vincent, you have in this instance, as you have in every other, behaved like an honest, honourable man; upon the question of Catholic emancipation my mind is made up, from which I *never* will depart; and therefore, as it is not likely that it will be a matter agitated or discussed between us, I can see no reason why you should not take the Admiralty, where I very much wish to see you, and to place the navy entirely in your hands.'"

To Lord St. Vincent the public owed the Commission of Naval Inquiry, which was violently resisted by his colleagues in the Cabinet, and supported only by himself and by Lord Chancellor Eldon. The description of that "drastic measure," as Lord Brougham calls it, is one of the best passages in Mr. Tucker's book:

"Thus much of it is beyond all dispute or cavil: it made towards practical improvement in those State affairs for which it was particularly designed, that great and honest step, which never can be retraced, and never sufficiently acknowledged—of fearlessly placing before the eyes of the public intelligible and true information of the details of those transactions into which abuse had crept, and might at any time attempt to return; and it laid the immoveable foundation—it paved the broad and certain way, for all the subsequent improvements in the civil department of the navy."

The block machinery at Portsmouth, the design of the breakwater in Plymouth Sound—are also to be attributed to St. Vincent's ardent zeal; and his inflexible denial of requests for promotion, even when urged by princes of the blood and by the most influential members of the peerage, because he would first provide for professional merit, is shown by numerous letters.

Never was an elegant compliment paid in more laconic terms than in the subjoined notes from Admiral Cornwallis, who had succeeded St. Vincent in the command of the Channel Fleet. Nor was there ever a neater return made than in St. Vincent's reply. These rough sons of Neptune might have challenged all the courtiers of Europe to have expressed themselves more tersely or more elegantly:—

"Ville de Paris, before Brest, March, 1801.

"My Lord,—The French fleet shows a disposition to put to sea; I apprehend they know that your Lordship has quitted the station. I have the honour to be, William Cornwallis."

"Admiralty, 2nd April, 1801.

"My dear Admiral,—The French know, and have experienced too much of your character, to risk theirs by facing you, in preference to

"Your sincere friend, St. Vincent."

Great part of Mr. Tucker's second volume is occupied by a defence of Lord St. Vincent's conduct at the Admiralty in reference to Mr. Pitt's attack upon him in the House of Commons. He quitted the Admiralty on Mr. Addington's resignation in May, 1804, and went into opposition, but when the Whigs returned to office in 1806, he again accepted the command of the Channel Fleet, bearing the union flag at the main. He relinquished his command on the change of administration in 1807, and was never again employed. His interview with the King on this occasion, is worthy of attention, as it reflects honour upon the venerable Admiral's spirit and independence:—

"Almost immediately after the flag was struck for the last time, the King commanded the presence of his great Admiral at a private audience. After homage had been paid to Majesty, George III. expressed deep regrets that his officer would not continue in command of his channel fleet; to which Lord St. Vincent replied, 'Sire, my life ever has been, and ever will be, at your Majesty's disposal, but I am the guardian of my own honour, and I could not place it in the hands of your Majesty's present ministers.' The King, at first, appeared rather displeased; but then, in the most gracious manner, said, 'Well, Lord St. Vincent, you have now quitted active service, as you say, for ever—tell me, do you think the naval service is better or worse than when you first entered it?' Lord St. Vincent—'Very much worse, may it please your Majesty.' The King, very quickly—'How so? how so?' Lord St. Vincent—'Sire, I have always thought that a sprinkling of nobility was very desirable in the navy, as it gives some sort of consequence to the service; but at present the navy is so overrun by the younger branches of nobility, and the sons of members of parliament, and they so swallow up all the patronage, and so choke the channel to promotion, that the son of an old officer, however meritorious *both* their services may have been, has little or no chance of getting on.' The King—'Pray, who was serving Captain of the Fleet under your Lordship?' Lord St. Vincent—'Rear Admiral Osborne, Sire, the son of an old officer.' The King—'Osborne, Osborne! I think there are more than one of that name admirals.' Lord St. Vincent—'Yes, Sire, there are three brothers, all admirals.' The King—'That's pretty well for democracy, I think.' Lord St. Vincent—'Sire, the father of those officers served twenty years as first-lieutenant, with my dear friend Admiral Barrington, who had never sufficient interest to get him beyond the rank of commander. He was, of necessity, obliged to send all his sons to sea, and, to my own knowledge, they never had anything more than their pay to live on; nevertheless, they always appeared as gentlemen; they were self-educated, and they got on in the service upon the strength of their own merits alone; and, Sire, I hope your Majesty will pardon me for saying, I would rather promote the son of an old deserving officer than of any noble in the land.' The King mused for a minute or two, and then said, 'I think you're right, Lord St. Vincent, quite right.'"

Our concluding extract shall be the description of St. Vincent's death-bed:—

Digitized by Google

"On the same afternoon Dr. Baird and Mr. Tucker returned. They found that, after passing a still more restless night, his Lordship was gone to his bed, and was in the most alarming state. But even now, while he lay in intensest sufferings, and while the hand of Death was all but on him, still quite alive to all the passing events of the day, the ardour which he exhibited for freedom was as strong as ever. He positively *would* be informed of all that was going on in Greece. His zeal in the cause of the liberty of Spain seemed increased. The newspapers, as usual, were all read to him. It was perfectly evident that he listened to every sentence with undiminished attention. At the conclusion of M. Manuel's speech, he said he was 'a fine, manly fellow;' afterwards, that the French gend'armes who refused to execute the 'outrageously illegal order' to arrest that dauntless deputy, 'had behaved like a noble fellow.' His Lordship then dozed a little; when he awoke, he said, 'What a convulsed state the world is in!' He then inquired 'where the Duke of Lorenzo,' who it will be remembered, was sent to England to represent the Constitutional Government, 'was lodged?' and when told, at the Spanish Ambassador's, and that the British populace had testified their good wishes for the Spanish cause, by marks of respect to the former, and of a contrary feeling to the latter, it caused him for a moment to forget his pain and his sufferings, and his countenance brightened up for the last time. The radiance was but transient; yet it was enough to show what a soul he had for freedom, and that his mighty spirit was only setting, but was not enfeebled. After that, he lay in silent exhaustion for two hours, during which the bystanders of his bed were, his old captain, Sir George Grey, the affectionate Dr. Baird, and the heart-broken Secretary; the witnesses of his greatest energies; the objects of his uninterrupted countenance and kindness. About half-past eight, his extremities were noticed to have become cold and clammy; exertion in breathing then gradually increased to a labour beyond his strength; and, at last, without a sigh or a groan, but with merely an effort similar to a suppressed sneeze, he expired."

Without any disrespect for the labours of Captain Brenton or Mr. Tucker, we must repeat our desire to see yet another life of St. Vincent, which shall present him without those meretricious colours with which injudicious biographers bedaub their heroes. A glance at other sources of information persuades us, that some striking facts and anecdotes should supersede many in these volumes. Mr. Tucker has contrived to give an air of silliness and childishness to some stories which he evidently considers clever and piquant, and for which we hope the shade of St. Vincent may forgive him. His admitted ignorance of nautical affairs is some excuse even for such an absurdity, as representing the old Admiral sitting in a gale of wind on the quarter deck, "*in a bight of the main topsail!*" (II. 18). But why did he not ask some nautical friend to read his manuscript, that it might be free from such gross blunders as offend the eye even of, what his hero would have called, a *land lubber* of a *reviewer!*

The Laurringtons; or, Superior People. By Mrs. Trollope. 3 vols. Longman & Co.

THE spectacle of Ignorance "rising in its own opinion every hour," of Dulness pluming itself on the possession of fancy and spirit, of Prejudice "suffocated with admiration" at its own knowledge of life, is diverting, by way of variety, though wearisome, if too long contemplated. Few are better calculated to exhibit such a group of puppets than Mrs. Trollope. Her 'Superior People' are gems of the first water. We have known them:—a shallow, pompous, rich brother, and three shallow, pompous, comely sisters (one even a beauty), who manage to hide from themselves their own selfishness and unpopularity, by perpetually chiming in each other's ears the fact, that they are too good for the generality of their neighbours, who desire to be intimate with them yet dare not; and by lavishing on each other fulsome compliments, and personal attentions. Meek Mrs. Laurrington, the mother, is but an appendage to these cumbrous pieces of magnificence, though her fortune propped up the family—she being one of two co-heiresses to a pin-maker's hoards—a fact brought forward *in terrorem* by her genteel children, whenever she shows the slightest disposition to have a will of her own. Yet they are not too genteel to be most magnetically attracted towards the hoards of the other co-heiress, a maiden Aunt Watts; who has begged their youngest sister (the fifth Laurrington) for humble companion, has trained the child up in every good grace and honest affection, has discountenanced all rumours proclaiming her as heiress elect,—and who is, therefore, an object of "thrilling interest," and secret detestation to the quartett of 'Superior People.' Commend us to Mrs. Trollope's spinsters! Mrs. Ellis has finished the 'Mothers,' 'Wives,' and 'Daughters,' but to the authoress of 'Widow Barnaby' fall by right the 'Aunts' of England. Never was faëry intervention so nimble and mysterious—never were purses so omnipotently guinea-full, never wits so keenly inventive, as theirs. But Aunt Watts beats either Aunt Betsy or Aunt Cli, in the comprehensive boldness of her schemes and performances. Returning from the continent, she finds Cornelia Laurrington, the Superior beauty, engaged to the very man of men, who is worthy of her own pupil and darling Cecilia; she perceives William Laurrington, the intolerable *Magnus Apollo* of the family, committing himself in wedlock to as artful and fashionable a shrew as ever sold herself for an establishment and took out the sacrifice in tormenting her buyer:—but (to quote from 'Sir Charles Grandison') "these surprises affright not her steady soul." Here she drops a hint, there a sly letter, lastly, lavishes munificent London hospitality on the whole intolerable crew, for the purpose of unmasking them, and extricating from their toils the nephew-elect, whom she resolves to endow with her immense wealth and her Cecilia! How she is crossed and thwarted, and what may be the end of her devices, must be communicated to the public, by the agency of the circulating libraries. But we must warn the world that this novel contains a more than usual number of examples of the *anti*-"she-never-told-her-love" principle, and Mrs. Trollope, we suspect, will have a heavy account to settle with the "Aunts" on this head. The learned Mary, the musical Araminta, the beautiful Cornelia, the exquisite Cecilia—all "profess" first—and, as if this was not enough, one of the accessory personages—a certain fair and fanciful widow, Lady Willbury, who very much admires a certain admirable Rev. Mr. Ormond and a certain *roué* cousin, Frank Mastermann, at the same time—"takes the initiative" with a vivacity more perceptible than Mrs. Trollope will find it decorous to encourage in the essay we have bespoken from her. This understood, there is no offence in 'The Laurringtons'—some shrewdness—some merriment, and a little extravagance. The 'Superior People' will not be found bores, if bidden to country-houses for the entertainment of Christmas guests.

OUR LIBRARY TABLE.

The Lady's and Gentleman's Diary.—Last year, we believe, the two mathematical almanacs, the Lady's Diary and the Gentleman's Diary, were united: the Gentleman being about 120 years old, the Lady about 140. We take an interest in these publications, in which so many English mathematicians have commenced their career. The joint publication, we think, ought to state the age of the parties in the title-page, as the individual ones used to do: is it that the lady objects to appear as twenty years older than her husband? And we are sorry to see the quaint old announcement of purpose so mawkishly modernized. It used to be "designed principally for the amusement and instruction of the fair sex," and "containing many useful and entertaining particulars, peculiarly adapted to the ingenious gentlemen engaged in the delightful study and practice of the mathematicks." The joint work is "designed principally for the amusement and instruction of students in mathematics; comprising" (out upon *comprising!*) "many useful and entertaining particulars interesting to all persons engaged in that delightful pursuit." For shame, Stationers' Company! turn the "fair sex" into "students in mathematics," "ingenious gentlemen" into "persons," and "study and practice" into "pursuit"? All this is even worse than leaving out of mathematics the *k*, which proved the antiquity of your work. What is to warn (we speak to your feelings) the lover of old times who sees your young couple in a shop window, that he is not looking at a thing of yesterday? do you think that many a purchaser was not attracted by "the hundred and thirty-seventh almanack published of this kind," and the like? Would you have dared to do so with old Moore or Poor Robin? Give us both the old titles in one; knock out the Albert-and-Victoria looking medallion, and make something like the Prince and the Queen, which will be appropriate, since the junction of the almanacs took place in the present reign; modernize the contents, but not the form, of your useful and well-remembered old work.

A Diagram to define the Lives of the Patriarchs, by H. Smith.—Mr. Smith is the inventor of what he calls Self-Supporting Dispensaries, which, it appears, have been "cruelly attacked and misrepresented." He had also something to say on the "allotment of land to labourers," "fêtes and public holidays for the working classes"—and these subjects he discourses on in some lengthy appendices to the present volume, which seems, in fact, only a peg—and that a bad one—whereon to hang a foolish and angry preface and the before-mentioned appendices.

Records of Scenery and other Poems, by the Hon. J. A. Maynard.—A volume of that easy kind of octosyllabic and other verse which means nothing—or very little. All surface and no depth. It contains, however, evidence of kind feeling, prettily expressed.

The Cabinet Edition of the Works of W. Shakspere, edited by C. Knight.—This pretty little edition is now complete, and for beauty, accuracy, and price, may be pronounced unrivalled, even in these days of cheap and elegant publications.

Letts's Diaries—Richards's Diaries.—The usual preparations for the coming year are proceeding rapidly. Now that the Almanacks have nearly all made their appearance, the Diaries of various forms and on various plans are following. Messrs. Letts & Son have published their customary numbers of all shapes and sizes, each of them useful in its way; and Mr. Richards has issued two, both of very convenient forms. Mr. Richards has also published a neat and useful Account Book, which we can recommend to all careful housekeepers.

Maps.—Mr. Wyld has just published an interesting map, by J. J. Forrester, of the *Wine District of the Alto-Douro*—and another of the *Sandwich Islands*.

List of New Books.—Coleridge's (S. T.) Poetical Works, 3 vols. fc. 8vo. new edit. 15*s.* cl.—The Works of Beaumont and Fletcher, edited by Dyce, Vol. IV., 8vo. 12*s.* cl.—Life in the Sick Room, by an Invalid, 8vo. 8*s.* bds.—Ackerman's Coins of the Romans relating to Britain, 2nd edit. 8vo. 10*s.* 6*d.* cl.—Halliwell's History of Freemasonry in England, post 8vo. 2*s.* 6*d.* cl.—St. Patrick's Purgatory, an Essay on the Legends of Purgatory, Hell and Paradise, by T. Wright, post 8vo. 6*s.* cl.—The Tests of Time, a Story of Social Life, by S. Wood, 12mo. 5*s.* cl.—Tales of the Great and Brave, by M. Fraser Tytler, 2nd series, fc. 8vo. 5*s.* cl.—Daniel's Directory to the Port Charges of Great Britain and Ireland, and Principal Foreign Ports, 8vo. 6*s.* 6*d.* cl.—James's Christian Watchfulness, 5th edit. 12mo. 6*s.* cl.—James on the Collects, 10th edit. 12mo. 5*s.* cl.—The Faith once delivered to the Saints, Six Discourses, by Rev. J. Ridgway, 12mo. 5*s.* cl.—The Christian Ladies' Magazine, Vol. XX., 12mo. 7*s.* cl.—My Early Days, 4th edit. 18mo. 1*s.* cl.—Friendly Visitor for 1843, 12mo. 1*s.* 6*d.* bds.—Children's Friend, for 1843, 32mo. 1*s.* 6*d.* hf-bd.—The Cottager's Monthly Visitor for 1843, 12mo. 4*s.* bds. 4*s.* 6*d.* hf-bd.—The Christian Magazine, Vol. II., for 1843, 12mo. 2*s.* 6*d.* cl.—The Missionary Repository for Youth, Vol. V., fc. 8vo. 2*s.* cl.—Nursery Rhymes of England, edited by J. O. Halliwell, Esq., 3rd edit., with illustrations, 12mo. 4*s.* 6*d.* cl.—A Christmas Carol in Prose, being a Ghost Story of Christmas, by Charles Dickens, Esq., fc. 8vo. 5*s.* cl.—The Home Treasury, 'Jack and the Beanstalk,' square, bds. 2*s.* tinted, 3*s.* 6*d.* coloured.—The Home

Treasury, 'Chevy Chase,' square, bds. 2*s.* 6*d.* tinted, 4*s.* 6*d.* coloured.—Lessons on Animals, Vegetables, and Minerals, by Mrs. Marcet, 18mo. 2*s.* cl.—Arabella Stewart, an Historical Romance, by G. P. R. James, Esq., 3 vols. post 8vo. 31*s.* 6*d.* bds.—Whitefriars, or the Days of Charles the Second, an Historical Romance, 3 vols. post 8vo. 31*s.* 6*d.* bds.—Men and Women, by the Author of 'Susan Hopley,' 3 vols. post 8vo. 31*s.* 6*d.* bds.—Harry Mowbray, by Capt. Knox, 8vo. 13*s.* cl.—The Italian Confectioner, or Complete Economy of Desserts, by W. A. Jarrin, new edit. post 8vo. 12*s.* bds.—Copland's Medical Dictionary, Vols. I. and II., 8vo. 3*l.* cl.—Sir Robert Peel and his Era, 2nd edit. post 8vo. 5*s.* cl.—Sheppard's Observations on the Proximate Cause of Insanity, 12mo. 3*s.* 6*d.* cl.—Thacker's Rules for the Decision of Courses, fc. 2*s.* 6*d.* cl.—History of Frederick the Great, by Kugler, 8vo. 21*s.* cl.—Hansard's Parliamentary Debates for Session 1843, being Vols. LXVI. to LXXI., 3rd series, 8vo. 3*l.* 8*s.* bds.—Montagu and Ayrton's Law and Practice of Bankruptcy, by Roe and Miller, 2nd edit. 2 vols. 2*l.* 2*s.* bds.—Hamilton's Family Ledger for 1844, 8vo. 1*s.* 6*d.* cl.—The Architectural Annual for 1844, 'Ancient and Modern Architecture, first series,' imperial 4to. 2*l.* 12*s.* 6*d.* cl.—The Royal Blue Book, 1844, royal 18mo. 5*s.* bd.—The Anglo-Indian-Chinese Almanac, 1844, 1*s.* swd.—Allen's Latin Delectus, 2nd edit. 12mo. 4*s.* cl.—School Music, or Songs and Hymns from the Singing Master, 8vo. 5*s.* 6*d.* cl.—The Wrongs of Women, Part IV., 'The Lace-Runners,' 18mo. 2*s.* 6*d.* cl.

PICCANO ARLOTTO.

"I will invite that merry priest
Arlotto for to-morrow's feast:"
Another, quite as merry, said,
"And you shall see his fun repaid.
When dinner's on the board, we'll draw
Each of the company a straw:
The shortest straw shall tap the wine
In cellar, while the others dine:
And now I'll show how we'll contrive,
He draws the shortest of the five."

They learn their lesson: there are few
Good priests (where eating goes) but do,
From Helgabalus, ending with
Humour's pink primate, Sydney Smith.
Such food more suits them, truth to speak,
Than heavy joints of tough-grained greek.
Well; all are seated.
"Where's our Chianti?"
Cries one: "without it feasts are scanty.
We will draw lots then who shall go
And fill the bottles from below."
They drew. Arlotto saw their glee,
And nought discomfited was he.
Downstairs he went: he brought up two,
And saw his friends as friends should do,
Enjoying their repast, and then
For the three others went agen.
Although there was no long delay,
Dish after dish had waned away.
Minegra, liver fried, and raw
Delicious ham, had plumpt the maw.
Polpetti, roll'd in anise, here
Show their fat sides and disappear.
Salame, too, half mule's* half pig's,
Moisten'd with black and yellow figs;
And maccaroni by the ell
From high-uplifted fingers fell.
Garlic and oil and cheese unite
Their concert on the appetite,
Breathing an odour which alone
The laic world might dine upon.
But never think that nought remains
To recompence Arlotto's pains.
There surely was the nicest pie
That ever met Piccano's eye.
Full fifty toes of ducks and geese,
Heads, gizzards, windpipes, soak't in grease,
Were in that pie, and thereupon
Sugar and salt and cinnamon;
Kid which, while living, any goat
Might look at twice and never know't;
A quarter of grill'd turkey, scored
And lean as a backgammon board,
And dark as Saint Bartholomew,
And quite as perfectly done through.
Birds that, two minutes since, were quails,
And a stupendous stew of snails.

"Brother Arlotto!" said the host,
"Here's still a little of our roast.
Brother Arlotto! never spare."
Arlotto gaily took his chair
And readily fell to: but soon
He struck the table with a spoon,
Exclaiming, "Brother! let us now
Draw straws agen. Who runs below
To stop the casks? for very soon
Little is there within, or none."
Far flies the napkin, and our host
Is down the cellar stairs.
"All lost!
Santa Maria! The Devil's own trick!
Scoffer! blasphemer! heretick!
Broaching (by all the Saints) five casks
Only to fill as many flasks!
Methinks the trouble had been small
To have replaced the plugs in all."
Arlotto heard and answer'd. "You
Forgot to tell me what to do.
But let us say no more, because
We should not quarrel about *straws*.
If you must play your pranks, at least
Don't play 'em with a brother priest."

WALTER SAVAGE LANDOR.

* There is an excellent reason why the sausage and salame of Bologna should be in estimation. Nearly all the mules and asses of Italy, descending from the Alps and Appennines, worn with age and diseases, end their existence in that central city, where others are always in readiness to replace them. Their flesh is very little adulterated with any other: the sinews are minutely and well pounded, and the garlic and muriate mollify the most obstinate fibre.

ROYAL ACADEMY.

PROFESSOR J. H. GREEN'S LECTURES.

Beauty and Expression as the Elements of the Fine Arts.

Mr. President and Gentlemen,—The subject of these lectures is the anatomy, or distinct exposition of the Human Body, its form, and its capabilities of movement and position. In addition, however, to the interest which we all, as men, and by force of a thousand associations, cannot but feel in this beyond all other forms, the character which expressly and especially entitles it to the attention of the artist, is its superior beauty and expression, or expressiveness. I may therefore, perhaps, claim your indulgence in having selected these subjects as the appropriate theme of my introductory lecture to an anatomical course in the service of the Fine Arts, in which it has been usual to permit, and even to expect, a greater expansion of thought and subject, and thus to allow the lecturer to increase his claim to the after-attention of his audience on points proper to his own profession, by having assured them of his intelligent sympathy with those aims and objects which are common to all cultivated minds, but are more especially the province of the artist.

Artist and Artizan—the worker in the Useful and the worker in the Fine Arts—are both comprehended in the general definition:—one who produces with design; that is, after a pattern in his mind, which he would give an outward existence to.

Now, I have often thought that the world of production may very conveniently be divided into three realms, or spheres. In the first, Nature is the artist, and man the noblest product—at once the crown and the epitome of all below him: man, I say, as far as we are permitted to consider him as a product of nature; that is, the organic body of man, the human organismus. In the second sphere of production, it is man that produces; but in order to outward and circumstantial interests; for the most part in behoof of his animal needs, wishes, and conveniences; but always as means to certain ends, which are themselves only means to some ultimate end: as a knife for the division of food, which is itself but a means to the sustentation of the living body, or the pleasure that accompanies it. Hence the productions in this sphere have their value determined wholly by their utility; and it is, therefore, in this restricted but most proper sense of the word, the sphere of the Useful Arts. In the third sphere, likewise, man is the producer; but he produces under the influence and from the impulse of a higher interest—an interest grounded on the constitution of the human mind, as far as it is exclusively human, and for the communication and excitement of a delight not only peculiar to man, as contradistinguished from the animals, but characteristic of cultivated man—a delight which is the test of the excellence which excites it. This, then, is the third sphere of production—the sphere of the Fine Arts; distinguished in many ways from the preceding, but principally by the difference of the object of pursuit. In this sphere, the artist, as it were, abstracts himself from the outward world, while he still appeals to the senses, by which he is placed in communion with the same; and he seeks to substitute a world of his own; to project his own inward thoughts, but no longer as thoughts, but as things, having that correspondence to the thoughts which, in the sphere of the useful arts, the thoughts have to outward things. In fact, on this very ground are they the Fine Arts, that the products do not acknowledge their appropriate criterion in the outward things, but in our thoughts of these things; and the artist who would paint or model on the principle that the *beau ideal* of his productive genius should be a fac-simile of nature—who would paint every brick in a wall, or twig in a tree, with precisely the same distinctness as the same would be actually seen at the supposed distance with the eye, would but excite regret for time wasted and talent misapplied. For what is the object of the painter or sculptor? Not to act on, or modify things; nor yet to communicate a scientific knowledge of them as they exist in nature; but to reproduce their images in the mind, in that order and combination, and with that superaddition of reality and fixture, which is delightful to the mind by the mind's own laws and constitution. As, too, his productive activity is differently directed, so likewise is his social sympathy. A great painter is reported to have once addressed a minute critic, who was peering into a history piece—"Sir, my picture was not made to be smelt at!" and, with equal propriety, a great landscape-painter might say to a critic of the same class—"Sir, my trees were not intended to teach you botany!" The artist seeks a soul similarly constituted and affected with his own, and akin to him—not, indeed, in the power of production, but allied to him by a power of appreciating the product, and a susceptibility of delight from the same.

In the sphere of the Useful Arts, from which I have sought to distinguish the sphere of the Fine Arts, we have found the governing faculty to be the Understanding; and the object, or impulsive motive, that calls the understanding into exertion, is Commodity, or Self-interest in reference to that part of our being which we have in common with the animals. In the artistic sphere, on the other hand, I may say, without fear of controversy, that the governing faculty is the Taste; and that the object or impulsive motive is the production of the Beautiful, and of the peculiar Complacency which results from the contemplation of the Beautiful. Its aim and object, therefore, appertain to that part of our being which man has exclusively, and by which he is divided from the animals—by which, in fact, he is a man.

Now, it would be an interesting, and, I would add, not uninstructive fact, should it be found that the characteristic perfection of the Fine Arts is the same, the subjects only being different, with that which Nature aims at in the crown of her productions in the vast world of animal life. Man, in the sphere of his productive agency—becoming, as it were, another nature—seeks to repeat in the peculiar world of man a product having the same perfection, and uniting the excellence of both—a product necessarily ideal, because grounded in the constitution of the human mind: but to this he will add the character of sensible nature; that is, outwardness—sensible reality. Now, the true character of the human organization, the distinctive characteristic of man's bodily frame, consists in its fitness to a balance of the organs and organic powers; and without anticipating the proof, which for my present purpose is unnecessary, my position is, that as the organic frame of man exhibits the most perfect attainment of corporeal existence in the adjustment of all the living powers and faculties to a balance, which it permits and requires, so doth the perfection of artistic genius consist in a harmony and balance of the mental powers and faculties, and the ideal perfection of the products of artistic genius in the fit representment and, as it were, reflection of this harmony.

But here I must appear to have contradicted myself; for the balance and equilibrium of powers is contrasted with the marked predominance of any one power; and yet, as I have stated, Taste is the governing power in the sphere of the Fine Arts: and if, indeed, Taste be a single faculty—if there be any single faculty of the human mind which can, with any propriety, be called Taste, the contradiction is irre-

Digitized by Google

movable; and my only chance for acquitting myself of the charge must be, that what is meant by the word Taste, is actually a unity resulting from the equilibrium of all the powers that constitute the human mind—a complacency arising from the equable excitement and gratification of the whole man, as far as his character is exclusively human. There have been, indeed, critics and connoisseurs who have even written voluminous theories of Taste, who have overlooked—nay, who have boldly denied any difference between the pleasurable affection of the senses and the intellectual complacency now in question. But, honestly, I can hold such fancies deserving of no other confutation than by putting the assertion in some such form as the following—that the taste *for* the works of Raffaelle is the same in kind and origin as the taste *of* venison, and the taste *of* turtle has no intrinsic difference from the taste *for* Milton and Shakspeare,—and then leaving the theory to its own absurdity.

Henceforward then it will be understood that by Taste I mean the appropriate sense of Beauty, existing in that degree of cultivation, in which it manifests itself by the production of the Beautiful, or by the power of discovering and appreciating the same in the products of others. And the positions on which I conceive the theory of the Fine Arts to be grounded are no less than these:—First, that the primary object of the Fine Arts is Beauty. Secondly, that in all beautiful objects the human soul is affected as a whole, and the mind seeks its most perfect state, consisting in a living balance of all its constituent faculties, reflected to us in the beautiful object. But thirdly, that this is a living balance,—it is an act; and the source of the peculiar pleasurable emotion or complacency is the act and moment of balancing;—again, that this complacency consists with the apparent disturbance, though not with the destruction of the balance;—nay, that the complacency is even heightened by the temporary disturbance, for this living balance is necessarily a state of oscillation, which, at the same time that it permits action, never destroys repose.

This apparent disturbance—this tendency to fly off from the centre, but which never passes beyond the controlling and recalling influence of the centripetal power, is Expression, which, by seeming to disturb, actually manifests the existence of the equilibrium, and, as the motion in a beautiful fountain, gives it life without destroying the identity of form, and imparts variety without the sacrifice of unity. And thus the total result will be, that the common ground of the Fine Arts is Beauty, considered as the centripetal force, while the tendency to pass from the centre, to awake out of this repose, is Expression, represented by the correspondent centrifugal force.

The best proof of the truth of this theory will be found in an enumeration of the constituent faculties of the mind, and in the fact that, in the sense of the Beautiful, each of these is present as one of the factors, and that no one of them is predominant; but that from their co-operation, or living balance, there results a peculiar complacency of which the mind is conscious, and which thus performs the functions of a judgment. So consonant is this with our experience that we almost daily hear persons disclaiming any pretence to judgment respecting this or that work of art, adding, however, "I can only know what I felt";—"it pleased me";—or "it was beautiful to my mind." There are other facts that tell strongly for the truth of this explanation of the beautiful. An object may be excellently fitted to produce a high state of excitement or enjoyment for this or that single faculty, as, for instance, a state of pleasurable sensation in reference to our animal life, a state of vivid emotion resulting from the more impetuous passions, but lowered by memory and fancy into that state in which the results are pleasurable. But such objects only by a gross abuse of language are called beautiful by individuals, in whom the sense of beauty is in fact dormant, whether from natural obtuseness or from imperfect cultivation, yet who at once repeat and misapply the language they have learnt from their betters. A late writer on Taste, inattentive to this difference, has given a ludicrous portrait of a female negro, concluding with these words: "Such is the ideal of beauty in Dahomy!" It is remarkable that about the very same time a very intelligent and observant traveller had published the result of some months' sojourn in the kingdom of Dahomy; and without the least reference to, or rather without the least consciousness of, the remark made by the critic, he has these words: "So very low is the state both moral and intellectual of the Dahomese, that in their whole language they have no word for Beauty; but when they are pleased, or have their desire excited by an object, they say it is "Nice" and good for such a thing; and no wonder (concludes the traveller) for the very sense of beauty is dormant, and, if it exists at all, exists but as the flower in the seed." The name truly descriptive of those objects, which excite pleasure by gratifying separate faculties of our nature would be Interesting; and this is the case with everything which derives its pleasure from Association. The sense of the Beautiful is always immediate, primary, disinterested. The shepherd does more than value his shepherd-dog, the indispensable helpmate of his charge, his faithful companion, his loyal guard,—he loves him, nay, he esteems him. The leopard and the tiger are the merciless and treacherous ravagers of his flock, the objects of his personal terror and detestation, and yet the shepherd, supposing him to know the meaning of the word, would smile at the thought of comparing his rough-coated friend in point of beauty with either of the two:—"the leopard (he would say,) is a mischievous fiend, but, it must be allowed, is a very beautiful creature."

Another and important proof of the truth of this theory is, that it alone satisfies both of two known facts: the one that, even in the highest sense of the word Taste, the tastes of men differ; the other, equally certain, that in respect of the beautiful this difference is confined within very narrow bounds;—and that taking, what the theory demands and supposes, an adequate developement of our humanity, taking ages and countries of cultivation, the same or similar objects have exerted the same complacency. And, if we could raise an educated and refined Athenian from the grave, we should take him to the works of a Buonarotti, a Chantrey, or Canova, with the same undoubting confidence in their calling forth from him the sense and admiration of their beauty, as we should lead a contemporary of the same degree of moral and intellectual cultivation to the contemplation of the works of Phidias in the British Museum.

In short, what are the constituents of our minds, as far as they are human?—If, having enumerated them, we can show no one of them can be excluded from the sense of the Beautiful, and yet that the Beautiful is not referable to the action of any one distinctly or consciously, the inevitable conclusion will be, that it results from the simultaneous and harmonious action of all, made evident by the common result, and this I have named a living balance. Now, as far as I can trace the characteristic powers of my own mind, I find in myself Will, Personality, or that which every man means when he says I, myself;—next, Reason, or the power of contemplating necessary and universal truths, and of proposing ultimate ends for the determination of the Will,—that faculty which, when the sense shows us that the two sides of a given triangle are greater than the third, adds to this information: So it is universally, and so it must be. Further, I find the Imagination distinguished in kind from the Fancy:—as when we say that Milton is a highly imaginative, Cowley a fanciful poet: or that Shakspeare discloses the greatest luxuriance of fancy in his Queen Mab's dream, the profoundest energies of imagination in his King Lear, and unites imagination and fancy throughout the Tempest:—to the works of Callot we willingly apply the praise of great fancy; but assuredly in a very different sense do we attribute imagination to Michael Angelo.

These are the higher powers of the mind, and it is by the influence of these in the same mind that the remaining faculties are properly and peculiarly human, namely the Understanding, which, in the intelligent animals, we see as a faculty of selecting and adapting means to immediate purposes, but which, elevated by Free-Will, Reason, and Imagination, in man becomes the faculty of Words or significant signs, of Language in its widest extent, visual or auditual,—a faculty by which we generalize the notices of the senses, and by referring the phenomena to pre-established classes we determine their reality, independent of the impressions or images in our own minds. Then the Sense, the percipient faculty, which, when united with Sensation, and determined by a specific organization, constitutes the Senses. In learning geometry, the pupil is rightly instructed that it is not to the diagram on the paper that the demonstrations apply, but to the mental perception; that the true mathematical circle is an object of the pure sense, and exists in and for the mind alone, the diagram being only a picture or imperfect representative.

Moreover, as there is no chasm in the mind, and every faculty, therefore, must have an intermediate partaking of both; so between the understanding and the sense we find a most important faculty, and for which I know no more appropriate name than the Active or Schematic Fancy. It is that faculty by which we form the most general outline of our thoughts, the general scheme of our intended productions,—the mental scheme, for instance, which precedes and guides the sketch of a composition, or the actual draught upon paper of the first outlines of a figure. In like manner, below the sense, and oscillating between sense and the vital sensations, (which have their representative, and appear as a peculiar power, in the perception of spontaneity and sentiment of existence generally)—I place an intermediate, namely the Passive Fancy. This is the great agent in dreams, in the indescribable phantoms of delirium; but is in fact carrying on its processes every moment of our lives, and supplying the unceasing links of Association, indispensable instruments in the mechanism of recollection and memory: and thus oscillating, as I have said, between sense and life, the passive fancy accounts for the wonderful connexion between sensations and the dim, indistinct and fleeting imagery of sleep. "This is that very Mab," who

> "gallops night by night
> Through lovers' brains, and then they dream of love;
> On courtiers' knees, that dream on court'sies straight,
> O'er lawyers' fingers, who straight dream on fees;
> O'er ladies' lips, who straight on kisses dream."

These, according to my conviction, are the great constituent faculties, of which the human mind is the sum and unity:—the Will, the personal and conscious being; the Reason; the Imagination; the Understanding; the Active Fancy; the Sense, pure, and mixed as in the senses with sensation; the Passive Fancy; and the Life and Spontaneity. And permit me to remark that the nature of my subject left me no choice with regard to the enumeration, or to the elucidation, in order to render my meaning intelligible: for if I have not erred in the position, that Taste, Beauty, the sense of the Beautiful, the Complacency *sui generis*, which accompanies the perception, consist all alike in the existence of *a living balance of the mental powers*, then the Beauty contemplated and the sense of Complacency therein, the product in the mind of the beholder, and the producent in the mind of the artist, differ only in that the former is accompanied with a consciousness of the idea having been received and not produced, and the consequent, though perhaps unconscious, attributement of the active and producing power to another.

But before I proceed to the illustration of these views, I must detain you with one preliminary remark. The sense of the Beautiful, the idea of Beauty, arises, I have said, whenever the constituent faculties of the soul of man are so brought into simultaneous activity, as to permit and require a living balance or equilibrium of the whole. As the weight of the atmosphere pressing partially on the body calls forth a sensible resistance, but acting on all parts simultaneously produces only a sense of steadiness, so is repose the result of the balanced activity of the mental powers. But this repose, arising from the balance of their simultaneous action, can only exist under the condition of the energy of each being proportioned to that of the others; and, it must ever be borne in mind, that the faculties in question cannot be measured as equal forces, or considered merely as mensurable equivalents of like forces. A slight degree of the activity of the Will, for instance, or of the Reason, or of the Moral Sense and Affections, as attributes of both conjoined in the Personality,—a very slight degree of activity in either of these will suffice to counterpoise a much livelier excitement of the lower forms, of Sense, Sensation, and Spontaneity. And let it not be forgotten that the state of which I am treating is a mental repose, arising out of, and consisting in, a still continuing action, but this, an

Digitized by Google

equilibrium or living balance of simultaneous actions. Hence, it is motion in the form of rest,—a wakefulness that imitates sleep, a momentary trance, a working together of all the powers in and to the fruition of the whole mind. So in the beautiful fountains in the Colonnade of St. Peter's, or in the column of blue smoke from a cottage chimney in a tranquil evening, we see with delight the union of unceasing change with undisturbed identity—transiency counterfeiting permanency. As the result of these premises, you will see that the number of proportions and combinations, all of which may be equally susceptible of a balance, may be almost infinite, even as there are thousands of different forms, and combinations of form, all of which we call beautiful, and contemplate with the peculiar complacency in which the fruition of beauty consists.

I may now, with improved hopes of rendering my idea intelligible, proceed to its illustration by a commensurate example. We will take one of the simplest instances of the Beautiful: and if in these I include productions of nature, it is in the conviction that, as often as we stand in contemplation of the Beautiful in nature, we regard nature as an artist, and judge by the same rules, and with the same abstraction from the purposes of mere utility and of the immediate excitement of mere pleasurable sensations, as in works of art. We will suppose a young artist in a garden attracted by the particular beauty of a rose. First, it is evident that as far as he thinks of nature at all, he abstracts from all other purposes of design, of utility, or truth; in all these respects the particular rose presents no ground of preference to any other flower on the same bush, or to any other plant in the garden. It may be very true that there is a medicinally tonic power in the rose, and it is quite certain that its odour renders it highly agreeable, and that both the one and the other may add to our value for the rose: no less certain is it that the moss of the moss rose is a propagated disease of the plant, and that its numerous petals are a degeneracy and a virtual mutilation; but we think neither of the one nor the other, and the most enthusiastic botanist will, with a smile of inward complacency, admit that the moss in this instance is a beautiful disease, and the multitude of petals a beautiful degeneracy. If the admiring artist thinks of nature at all, it is as of an artist, having the same feeling and object with himself. So do we all when we make the following or any similar observation, that when no higher objects intervene, nature aims at beauty, as may be illustrated in the decay of vegetables. The decay of vegetable life is scarcely less lovely than its growth, the autumn scarcely less attractive than the spring and early summer; and the delighted poet directs the attention of the sympathizing painter to—

> The hanging woods, that touched by autumn seen,
> As they were blossoming hues of fire and gold,
> The flower like woods, even lovelier in decay.

But not only does he represent nature to himself under the abstraction of a fellow artist, but the particular product of the invisible Van Huysum is no less an abstract, or if I may venture so bold, so just an expression, it is a projected form, a visual melody, that exists only by the co-operation of his—the spectator's—mind, and mood of mind. Analyze then the state of mind at this moment,—though it is an essential character of the peculiar complacency in question, that the mind should not be distinctly conscious of the several agents that co-operate in its production.

First, the outward existence of any object, to which the attention is suddenly directed, awakens that peculiar sensation of existence, which in a certain degree of intensity is desirable to the mind, and the want of which is marked by depression or craving. To this the man who has been long in confinement or solitude will bear testimony; nay, the comfort which a single bush or tree is capable of affording to a captive gazing through the barred windows of keep or dungeon, will sufficiently prove the fact. Next, or rather in the same moment, the vividness of the colour acts on the Sensation; while the form, in like manner, calls into free activity the Perceptive Sense. Meantime the regularity of the outlines engages the understanding, and her main agent, in respect of sensible objects, the Active or Schematic Fancy; and at the same time the predominance of the curvilineal in all these lines (of the rose namely, the supposed object of attention,) prevents that distinct scientific contemplation, which exists in the constructions of geometry. The importance of this truth will be rendered more obvious by the examination of the conditions of Beauty in the beautiful object, which, as distinct from the sense of beauty in the mind, I have been obliged to postpone. So far, however, I may anticipate, as to notice the complacency with which the mind beholds the glimpse, as it were, of regular form, and then the modifications of that form by the influence of life and will, or by that freedom of curve and sinuous lines, not to be precalculated or anticipated, which counterfeits the movements of free life; a charm so often seen in the great works of Art, as to place out of doubt that it had formed an intention in the first design of the artist, whether cone or pyramid, or whatever else may be the ground of the composition. Free motion is the character of life; we see it not only in animated beings, but in the living, though inanimate forms of vegetables, and even in the inorganic world,—in the outlines of hills, in the meandering of streams, in the pendulous branches of the weeping willow that hangs over its own reflection in the river pool,—we see with lively complacency the semblance, the intelligible language of free motion; and yet more in the serpentine wood paths, where we connect the varying line at once with life, choice, will, and intelligent purpose.

That these higher powers in the beauties of still life are present only in feeble intensities, we must be prepared to expect; were they otherwise, were they called forth into higher or stronger activity, the co-agency of the minor powers would be withdrawn from our consciousness or wholly suspended.

> I gazed upon thee,
> Till thou, still present to the bodily sense,
> Didst vanish from my thought.

Yet, on the other hand, equally true it is, that these higher powers,—"the thought, the life, and life's own secret joy,"—are blending in the mind in the moment that the conscious attention is given to some beautiful form. And hence, in the greater works of Art, in the magic masterpieces of Raffaelle and Buonarotti, where the highest faculties of the soul are in strong action, a counterpoise thereto is still effected by calling into gentle activity their lower antagonists; and we see the pertinence and propriety of the ornamental accidents of the picture, and even of the delightful arabesques and flower-wreaths, which surround as a sort of frame some of the great pictures of the Vatican:—so, too, the twisted and spiral columns in the cartoon of the Healing in the Porch, without being distinctly noticed,—

> Yet like some sweet beguiling melody,
> So sweet, we know not we are listening to it,—

they awaken and call into effective and proportional activity, the Sensation, the Sense, and the Sensuous Fancy.

Again, on the other hand, in the humbler beauty of still life,—to recur to our former instance in the rose, and its fair sisters in the household of Flora,—the presence of the highest attributes of humanity, actually, though not consciously, co-operating, is evinced in the only way which is left conceivable, namely, in the tendency, in the disposition, to connect these objects with the highest forms or the tenderest affections of our proper humanity,—with love, with fond remembrance, with innocence, yea, even with the ultimate end and highest object of the moral Will and Reason. Hence, not only may we trace the presence of these powers in the popular names and associations,—the innocent Snowdrop, the humble Violet, the Heartsease, and Forget-me-not,—not only in the fabled loves of the Rose and the Nightingale, and the dedication of the Rose and the Myrtle, that to Beauty, and this, with its deep green leaves and snow-white blossoms and inward reserved odour, to Love; but they are invoked as sending up their fragrant dews as a sacrifice of Thanksgiving:—

> Soft roll your incense, herbs and fruits and flowers!
> In mingled clouds to Him, whose sun exalts,
> Whose breath perfumes you, and whose pencil paints.

Last, first, and midst, comes the Imagination, as the great fusing and modifying power; and as the active Schematizing Fancy incloses the many to a visible whole—the outward unity of complex perception—so works the Imagination in a higher, and, if I may so say, spiritual affection, in reducing, as with the influence of moonlight on a ruin,—the simultaneous many to a unity of effect—the uniting soul of the Beautiful.

I have purposely selected the most difficult instance; for if even here, in contemplating a dewy rose, and in that moment in which we are tranquilly enjoying its beauty, all the constituent powers and attributes of our proper humanity, of the whole man, be co-present, yet severally unnoticed, because hid in the balance of all,—far more easy must it be to exhibit the same truth in the higher and more commanding works of Art.

Thus, as far as my ability, and the narrowness of my limits, the shortness of my canvass, permits, I have placed before you the essence and character of the one of the two elements, out of the union of which the Fine Arts arise,—of Beauty, namely, in which I find the common ground of these arts;—and I have now to treat the other and antagonistic power,—that is, Expression. Beauty, considered strictly in and for itself, will give rise to Complacency; but, in order to enliven this complacency into poetic feeling, or artistic delight, Expression must supervene, and enter into union with the Beautiful. To borrow an apt illustration from the planetary system, already in part adopted, and apply it to the artistic sphere, the peculiar world of man,—let Beauty be its centripetal principle, and the antagonistic, yet friendly and correspondent, power as the centrifugal, will be Expression. At whatever moment any one of the operative powers acquires that increase of intensity, which begins to render it a distinct object of the self-consciousness, and consequently to threaten the continuance of the balance, then it is the genius of the artist to reproduce the balance by calling forth those powers in those relative intensities, which tend in retaining the Expression, and the expressive character of the work of art, to harmonize it with the beautiful, or the complacency, which requires the equable excitement of all.

But this predominant activity of the faculties of the human mind, severally and singly, constituting the sphere of Expression, arises whenever any outward object or existent in nature or art, becomes for us the exponent of an Inward,—Life, Mind, or Will,—of those powers, namely, or their analoga, of which we are ourselves conscious, and which, by virtue of our consciousness, we attribute to an outward existent: even as "when we keep a spring stretched with one hand, we feel an effort opposed exactly in the same way, as if we had ourselves opposed it with the other hand, or as it would be by that of another person." And this outward, then,—the inward ground of which is, by the constitution of the human mind, silently assumed to be, in kind, one with man's inward being,—addresses itself to the soul of man in that universal language, of which the Fine Arts claim especially to be the interpreter, and calls forth kindred and correspondent feelings as various as the kinds of Expression, significant of life, spontaneity, appetite, passion, moral affection, or individual character. In short, whatever object conveys an inward or subjective meaning, is *ipso facto* expressive, whatever that meaning or import may be in other respects, and whatever the nature or quality of the emotion may be in other respects, painful or pleasurable, ennobling or debasing. It will be unnecessary for me to do more here than recal to your attention the enumeration of the constituents of our humanity, with which I commenced the analysis of the Beautiful in the mind of the contemplant; and I may proceed at once briefly to illustrate my meaning by a few examples of Expression, when harmoniously combined with the Beautiful.

I begin with the lowest and simplest—a simple inward state, or character, of existence. Thus in admiring a landscape, we say: "What an expression of calmness, stillness, there is over all!" Or by the attribution of a higher power, especially where feeding cattle, or other forms associated with life, are introduced, we find an expression of tranquil enjoyment:—indeed I hold it barely possible to witness a landscape, bright with the first shower after a drought, without associating with it some sense of obscure fruition.

The next is Life in its simplest form as Spontaneity, the expression of which is free motion, or the lines which indicate the same. And here again I may appeal to the common language of men, almost to the instinct, by which we represent motion in

Digitized by Google

words implying life, will, and action; nay, we apply this language even to stationary and unmoving lines, where the eye in following them imitates motion:—the outlines of hills run in gentle undulations, the mountain towers and lifts its head, the river precipitates itself, rages, or "winds at its own sweet will." I scarcely need add that this expression of Life is the very soul of the beauty which we love in Claude Lorraine, or in a severer form admire in Poussin, or behold with more enkindled eye on the canvass of Salvator Rosa. In the language of the poet,—

The very dead creation, through its power,
Assumes a mimic life. By this illum'd,
In brighter mazes the reluctent stream
Plays o'er the mead. The precipice abrupt
Projects a horror o'er the blackening flood.
Yea! even the desert lives a sterner life
Through its melancholy bounds.

Indeed it is hardly possible, even in cool prose, to describe the component elements of a fine landscape in nature or art, without the use of language more appropriate to poetry—words significant of life and passion. Who has ever gazed on a magnificent water-fall—who has been favoured with the opportunity of viewing the cataracts and glaciers of the Alpine regions, and has not found in himself a disposition to address them as living powers, has not felt emotions similar to those with which the poet addresses the torrents of Mont Blanc?

And you, ye five wild torrents fiercely glad,
Who call'd you forth from night and utter death,
From dark and icy caverns call'd you forth,
Down those precipitous, black, jagged rocks
For ever shatter'd, and the same for ever?
Who gave you your invulnerable life,
Your strength, your speed, your fury, and your joy,
Unceasing thunder and eternal foam?
And who commanded—and the silence came—
Here let the billows stiffen, and have rest?

I have dwelt longer on this subject, because it furnishes so striking and undeniable a proof and instance of that same attribution by the mind of its own state to the outward object in this second element of the Fine Arts, which in a former part of my lecture I have contended to exist in Beauty, the other element and twin constituent;—and indeed the intimate union of Beauty and Expression in every great work of art would be utterly inconceivable, on the supposition that the birth-place of each was essentially diverse.

If then even the inanimate, in order to be seen with that inward complacency, which attests the presence of the Beautiful, must have the expression of life, so in rising into the realm of animated and intelligent being must the living forms have the expression of Force, Passion, or Fruition. If however I have successfully established the nature of Expression as a constituent co-factor in the gratification we derive from fine art, I may safely leave the youthful artist to the study of the grammar and vocabulary of the universal language in which each has its appropriate character. And who shall limit the achievements of genius in the use of this language, or despair of its resources? What apparently more hopeless than the attempt to portray the Fall, significant of the doom and final sentence of the unrighteous? Yet, that, by the magic of lines, and the masterly adjustment of the beholder's mind by the ministry of the multitudinous accompaniments in his vast work of the Last Judgment, Michael Angelo has effected this expression, a late poet, and an honoured member of this Academy, dear to both the muses (I speak of the lamented Alston) must have strongly felt, when he tells us:

The giant hand of Angelo hath hurl'd
E'en human forms, with all their mortal weight
Down the drear void,—fall endless as their fate!
Already now they seem from world to world
To have been for ages thrown; yet doomed another past,
Another still to reach, nor e'er to reach the last!

Perchance there are few problems the solution of which would be less promising to an ordinary mind than by mere unmoving lines to express to the eye the combination of lawless restlessness with imperious despotism; yet, says the same poet, describing the picture of Æolus, in the Institute at Bologna, by Pellegrino Tibaldi, gifted, he says, to call up

—the Spirits in embodied forms
Of gales and whirlwinds, hurricanes and storms;

—that in obedience to his bidding the stern relentless Lord of the Winds teemed into visible shape.—

His form of motion ever restless seems;
Or, if to rest inclined his turbid soul,
On Hecla's top to stretch, and give the word
To subject winds, that sweep the desert pole.

I have now however reached the goal, and have arrived at the Expressions, which are peculiarly human, bringing with them the recollection of human Affections, of Moral Will, of Character and Individuality. I should, however, needlessly transgress the limits of this lecture, were I to attempt the necessarily imperfect exposition of their characters; but here I may be permitted perhaps to notice the double sense and import of the word Expression, especially when applied to the human countenance, as the most significant exponent of the inward being and affections of man. Expression, in its highest and appropriate sense, implies an excellence which is the crown of all others. It is not only different from the ordinary characters and manifestations of those Passions, which in their fullest action level the highest with the lowest, and overwhelm the evidence of individual character in the animal nature common to all,—it is not only different, I say, from these; but it is incompatible with them, or discloses itself only as counteracting and modifying them. Far rather might it be affirmed that Expression supposes an equilibrium as it were of the features, and provides that unity and continuity of countenance, which is the result of an intelligent Will. Even in the fiercer emotions the Expression is given by the Will that controls them—sometimes only to retain and render them more intense, but still the Will, and still controlling the emotions. Without this essential character of humanity, Expression, in any higher sense or application, loses all its force and meaning. This distinctive character and exponent of man is not made by the countenance, but shines through it, and consists in the translucency of his proper and permanent being.

Take, indeed, any figure or representation of a native of Australia or of the Indian Isles, and you might apparently find in the brute-like degeneracy of the countenance an objection to my view. But it must strike every observant and reflecting beholder that this is a mere variety, and by no means the normal character of an original and enduring kind; not the representative of a genus, but an instance of casual degeneracy; not, indeed, confined to an individual, but yet characteristic only of a particular family,—a grape from the vine of humanity, that affords a specimen only of a blighted or abortive cluster, deprived of light and air, or with the stalk, that should have connected it with the trunk of the vine, bent, crushed, and the channels for the sap collapsed or obstructed. The essence or distinctive character of humanity gleams but dimly indeed, and confusedly, through a turbid medium, but yet it is sufficiently indicated to perceive that the differences from the portrait of a Milton, a Raffaelle, or a Dante are all but so many evident declensions from the idea and character of man.

To conclude,—if I have at all succeeded in the main purpose of this Lecture, I have shown that the perfection of the artistic genius consists in a harmony and balance of the mental powers and faculties, and the ideal perfection of the products of artistic genius in the fit representment and as it were reflection of this harmony: and as I have said that the characteristic perfection of the fine arts is the same as that which Nature aims at in the crown of her productions, so it will be my object to show that the distinctive character of man's bodily frame consists in the fitness to a balance of the organs and organic powers, and that it is in this balanced relation of the parts, their proportional developement, and harmonious constitution to one, that we recognize its perfection, as fitted for a being destined for moral freedom, and its corresponding aptitude for expressive beauty. And herein then we find a common ground of science and fine art; and if the anatomist in his studies seeks Beauty for the sake of scientific truth, so will the enlightened artist seek the scientific truths, of which anatomy is the key, in order to the easier conception and more confident production of Beauty and Expression.

THE GUIANA EXPEDITION.

We left (*ante*, p. 1091) Mr. Schomburgk, Mr. Goodall the artist, and their Indian followers, on the Wanamu at the point where the Wanamu and the Caphiwuin unite, and form the Kaphu, in circumstances by no means pleasant—short of provisions, and before them a journey of unknown duration, for they had already exceeded, by some days, the time which it was supposed would have been sufficient to reach the next Indian settlement, and they had not yet seen either habitation or human being. The banks of this river, at a distance of a few days from the above-named junction, are inhabited by the Tshikianas Indians; and further to the eastward is the territory of the formidable tribe of Maipurishanas or Cortoipityans (Tapir) Indians. These savages are described by the other Indian tribes as cannibals. They are reported to eat their enemies, and to prepare drinking vessels of the skulls of the vanquished in their frequent wars with other tribes.

"But," says our traveller, "of those warlike women, the Amazons, or Cunhapuyara Indians, no specific information could be procured. Our present journey appears to have chased them from their last hold—the upper Rio das Trombitas. Herrera and Acunha inform us that Orellana, while landing his troops at the mouth of the river Cunuriz—the present Trombetes,—was attacked by Indians, among whom he observed women fighting at their sides; and as neither Brazilian nor European was ever able to ascend the river, the abode of the republic of women was planted near its sources. We felt almost regret to disperse the last hopes of seeing the romantic accounts realized, which Indians and Europeans alike have spread of the Amazons." Thus the truth or fiction of a tradition which has been handed down from the remotest ages—even from times long before the very continent of America itself was known to us—and which has employed the pen of our most ancient writers, and supplied the muse of our modern bards, remains yet as doubtful as ever."

Our travellers continued to ascend the Wanamu, and on the 5th of August, approaching inhabited places, they increased their speed of paddling, in the hopes of gaining a supply of provisions. Mr. Schomburgk's boat was in advance, and turning round an angle of the river, two canoes with Indians were discovered advancing to them. As Mr. Schomburgk had, some days previous to his departure from the Maopityan settlement, dispatched two messengers over land, to inform the Pianaghottos of his intended visit, to prevent misapprehension, the advancing Indians were thought to be some of this tribe, coming to meet the travellers. Scarcely, however, had the savages observed the boats, than they fled in the utmost dismay. The Maopityans of Mr. Schomburgk's party were desired to speak to them, as knowing their language; but in vain; nothing could induce them to arrest their flight. Mr. Schomburgk's party now gave chase, being anxious to come up with them before they could land, and spread a needless alarm; when the fugitives, finding their pursuers gaining upon them, pushed for the shore, and abandoning their canoes, took to the woods. The other boats of the party having now come up, the whole pressed on with all speed to reach the village ere the alarm was spread. They arrived, however, only to find the settlement totally deserted. Hammocks, Cassada baking on the pans, dogs,—in short, every thing had been deserted in their trepidation and haste. Numerous axes, cutlasses, and knives were lying about, and in the huts. These were of Dutch manufacture, and were wistfully eyed by the Maopityan Indians, but Mr. Schomburgk gave strict orders that nothing should be disturbed or taken. These orders the Indians of the party obeyed, but the Maopityan guides were not to be restrained from falling ravenously upon the bread and dried meat they found on the barbacots.

But the difficulties and privations of our travellers' situation were now to be increased by the more active and more formidable dangers of treachery and desertion. "I had already retired to my hammock," says Mr. Schomburgk, "sadly disappointed in the hopes I had formed that morning of meeting the Pianaghottos, and accomplishing a quick journey to the sea coast, when one of the Wapisiana Indians who accompanied us from the Watu Tiraba, and who understood somewhat of their language, informed me that he had overheard the Maopityans planning to leave us about midnight to our fate, after having plundered the village of every valuable article. My resolutions were soon formed—the six Maopityans were put into one of the huts, and standing sentry before it with some of our Indians whom I could trust, I threatened to use our fire-arms, which we loaded before their eyes

Digitized by Google

if they attempted to escape. Daylight gave us the strongest proof of their bad intentions; not an axe, cutlass, or knife was to be seen, which, with every other valuable article, they must have removed after dusk, to be ready for the execution of their plan." Retaining the three chief-men as hostages, Mr. Schomburgk commanded the rest to restore the stolen goods; which, in a few hours, was done. They were then directed to go in search of the fugitive Indians, as Mr. Schomburgk was determined to keep his hostages close prisoners until a good understanding was established between our travellers and the Pianaghottos Indians. "Our situation," Mr. Schomburgk now remarks, "was critical in the extreme. Seeing us coming up a river which they knew was flowing into the Amazon, we had been mistaken for Portuguese, and the information we had received previously, that not long ago the Indians had murdered every soul of a party of Brazilians, who came up the river Dara, excepting only an Indian boy, was by no means calculated to quiet our apprehensions. Our scouts brought us several times information that they had traced footsteps of Indians departing in different directions, no doubt to give a general alarm, and marks were found near our camp, which proved that we had been reconnoitred."

In the midst of such difficulties and threatening dangers, another source of anxiety likewise befel our gallant traveller. The watches which fell upon him and Mr. Goodall *every* night, and perhaps great anxiety of mind, produced the severe indisposition of the latter gentleman, while Mr. Schomburgk himself also became unwell. However, after fourteen anxious days of delay, the scouts fell in with the family of Zumamata Indians, before alluded to, in our last, as being met with at the mouth of the Wanamu river, and they were easily induced to come to the camp of the travellers, from whence, loaded with presents, the younger individuals were despatched to quiet the apprehensions of the Pianaghottos.

Our travellers next pursued their course northward, ascending the Iriau, and, for the second time, abandoned their canoes, and with them almost all their baggage, as the small number of faithful Maccusies, now composing the party, were only able to carry the valuable instruments. With very natural regret, Mr. Schomburgk deplores the unavoidable abandonment of his collection of objects of Natural History and Ethnography. "I had some forebodings," says Mr. S., "that I was not to see them again."

They forded the river Iriau, which empties itself into the Wanamu, and wading through swamps, and traversing hillocks, from three to four hundred feet high, they reached, on the 21st August, the first small river which runs N.N.W. towards the Corentyne. The party were, therefore, once more on the elevation which divides the basin of the Amazon from the northern rivers. At length they approached a settlement of Drio Indians, and the joy of the party, after their late dangers and difficulties, may be better imagined than described, when they found themselves received by these denizens of the forest with friendship and welcome; and the chieftain promised that the next morning a party should be despatched for the baggage unavoidably left behind.

The village at which our travellers were now happily arrived, is situated near the sources of the river Cutari, the western branch of the Corentyne. The eastern tributary called Curuni, or Curuwini, is thirty miles further to the east, and is inhabited by the Cocoipityans, or Eagle Indians. The immediate neighbours of these, are the Maroons, or Bush negroes of Surinam, who inhabit the banks of the Meikoro, one of the branches of the Marowini. The Pianaghottos also, and the Drios—the kind hosts of our travellers—maintain a friendly intercourse with these people, and exchange with them hunting-dogs, cassada graters, waist laps, and other commodities of Indian traffic, for cutlasses, axes, and knives,—"the latter," says Mr. Schomburgk, "were all marked 'F. Lauer' on the blade." From information here procured, Mr. Schomburgk estimated the number of these Maroons to be from six to eight thousand souls.

For the third time in the course of this arduous journey, our party were here obliged to construct woodskins, or bark canoes, with which they hoped to descend to the coast. On the sixth of September these frail conveyances were ready, and the greater part of the baggage having arrived,—with the exception, however, of the tents, Mr. Schomburgk's collections, and most unfortunately the *salt*,—and as it would cause a further delay of eight days to wait for these, the party were once more *en route*.

The information our travellers received for their future course appears to have been very vague. But one Indian pretended to have ever descended the Corentyne, for any great distance, and he stated that on the 10th day they would reach an Indian settlement. Cassada bread was not very abundant, but our travellers had prepared for themselves a basket of farina, and loading their boats to the utmost with yams, and accompanied only by their ever faithful and trusty Maccusi Indians, the descent to the coast regions was commenced on the 6th of September. At the point of departure the river was a mere stream, and was often completely barricaded across by fallen trees, some eight and nine feet in diameter, which were obliged to be divided to permit the passage of the heavily laden boats. The progress of the party therefore, was so slow, that at the end of six days of laborious travelling, they had only progressed fifteen miles.

The River, however, becomes wider after receiving the tribute of the Amatau from the left, and a few miles below this point, it receives its second accession in the Curuni or Curuwini, which debouches into it on the westward, and is of equal size, and the water of the same colour, as the Cutari. At the confluence is a noble cataract, and the united rivers form a stream about three hundred yards wide. After this rapids succeed rapids in the descent, which, though not dangerous, proved exceedingly harassing to the party. A larger fall, however, which they reached on the 12th of September, was more formidable, and obliged them to unload the boats, and carry the baggage over land. The water of this rapid rushes over two ledges—the first from eight to ten feet in height—the second from fifteen to eighteen feet, forming altogether a beautiful and imposing cataract, rendered more picturesque and remarkable by the interposition of huge blocks of quartz, studded so thickly and richly with flakes of mica, "that their aspect," says our narrator, "when the sun's rays fell upon them, realized the picture the unfortunate Raleigh drew of Guiana; and I could not," he continues, "bestow a more appropriate name than that of Sir Walter Raleigh upon this cataract, which so forcibly called to my mind 'the country where every rock was gold.'"

The course of the Corentyne had hitherto been N.N.W., but on the 19th of September, it took a different course, trending westward, and frequently south-westwardly, and was so intersected and studded by rocks and islands, that its breadth spread out to several thousand yards. Of man having ever visited these wilds, no traces existed—all was solitude, and Nature in her primal and uncultured grandeur.

Our party now began to doubt the correctness of the information they had received from the Drio Indian. Fourteen days had now elapsed since they had embarked, and no sign of the settlement appeared which, according to his information, they should have reached on the tenth. The provisions were all consumed, except the basket of farina, and once more apprehensions of want were entertained, and prudence required that all should be put on the scanty allowance of six ounces of farina per diem.

The history of the succeeding ten days is a record of nothing but difficulties and dangers overcome, and privations and sufferings endured with courage and uncomplaining fortitude by all. Of all the rivers he had ever visited, Mr. Schomburgk represents the Corentyne as the most perilous to navigate. Fall follows fall, and our struggling party had often to unload and reload the canoes three times a day, carrying the baggage on each occasion several hundred yards over land.

Some of the cataracts, Mr. Schomburgk states, were grand and imposing in the highest degree, surrounded with all the beauties of tropical scenery. As their first discoverer, it became him to name them, and to some of the most remarkable and picturesque he gave the names of William Frederic, of Prussia, Lord Stanley, and Governor Light.

The bark canoes of our party were now beginning to show the effects of the hard usage of all this cataract navigation, and became in a wretched condition. The voyagers had even to tear off pieces of their clothing to stop the leakholes, hourly increasing by fresh collisions against the rocks. One canoe they were obliged to entirely abandon. In the midst of these difficulties, on the 24th of September, to the unspeakable joy of the whole party, the path which leads from the Corentyne to the Essequibo was discovered—and, far as they knew they still were from the completion of their journey, yet our party felt all the cheering influence of the enlivening thought, that they had now reached a part of the river occasionally navigated by human beings, instead of roaming through regions shared with them only by the wild beasts of the forest.

On the morning of the 28th of September, our party reached the foot of the great cataracts visited by Mr. Schomburgk in 1836. The greatest dangers were now passed; yet a journey of from three to four days' duration still stretched before them, ere they could hope to reach a Carib settlement; while, for the sustenance of the whole party—fifteen individuals—for that period, a few pounds of farina alone remained; "and when I threw a glance upon the emaciated forms of my Indian companions," observes Mr. Schomburgk, "the very word to urge them to paddle stronger died upon my lips."

On the morning of the 1st of October, the last morsel of the farina was shared out, amounting to something more than two ounces for each individual. Our travellers had not succeeded in procuring either game or fish during the two preceding days; even the mountain cabbage whose manica had often before stilled the cravings of their appetites, had failed,—none could be found. Summoning, then, a resolution and a degree of strength, which perhaps stern necessity alone could have leant to such worn and exhausted frames, they paddled uninterruptedly for ten hours; and such unwonted and arduous exertions were rewarded, as evening fell, by the sight of the first Carib settlement; where, Mr. Schomburgk being instantly recognized, the chieftain speedily had their wants supplied.

The next morning Mr. Schomburgk continued the journey; leaving Mr. Goodall to follow more leisurely with the rest of the party on the following day; and on the 7th of October the Chevalier reached the *Eliza and Mary* estate, at the mouth of the Corentyne, where he was received by the manager, Mr. Jones, with hospitality and kindness. Ultimately, on the 13th Oct., the whole party reached Georgetown; and we cannot more appropriately close our narrative, than, in the words of the leader himself—"having completed the circuit of the Colony, from its sea boundary to within forty-two miles of the Equator, in the course of nearly three years, I am happy to say, although we have had to brave manifold dangers, a kind Providence has been watching over us, and not an individual belonging to the expedition has lost his life, either by accident or sickness."

OUR WEEKLY GOSSIP.

We have just heard of the decease of the eminent landscape gardener, botanist, and indefatigable literary labourer, Mr. Loudon, who, an invalid for many years, was lately seized with inflammation of the lungs, rapidly declined, and died at his residence in Porchester Terrace, Bayswater, on Thursday last. In his profession as a landscape gardener, Mr. Loudon was confessedly the first of his day. But he had many other claims to distinction, for his studies and pursuits were various, although all linked together. His literary labours were extensive, and displayed extraordinary diligence; in proof of which, we may refer to his 'Encyclopædia of Gardening,' his 'Cottage and Villa Architecture,' 'Suburban Gardener,' 'Arboretum Britannicum,' and other works. He also projected and brought out the 'Gardeners' Magazine,' and the 'Architectural Magazine,' the first periodical expressly devoted to architectural subjects. Mr. Loudon has left a widow and one child, a daughter; the former well known by her literary works. No man ever laboured harder than Mr. Loudon, and yet, such is the hazard of literary speculation, he has died poor. The enormous expense of his last great work, the 'Arboretum,' involved him in debts and difficulties, from which efforts were just being made to extricate him, by issuing a new impression, and appealing to the country. His own statement is now before us, and we trust it will be listened to with

Digitized by Google

attention, and that his wife and daughter may yet reap the fruit of such indefatigable labours. "The 'Arboretum Britannicum' was got up between the years 1833 and 1838, and published on Mr. Loudon's own account, at an expense of upwards of 10,000*l.*; the greater part of this sum was owing at the completion of the work, but it sold so well, till the late depression of the book trade in 1841, that only about 2,600*l.* of the debt remained to be paid off at the end of that year. It is, however, necessary to observe that this large proportion of the debt was not paid off solely by the produce of the 'Arboretum,' but in part by the profits of Mr. Loudon's other literary property, consisting of thirteen different publications, all of which stand pledged in the hands of his publishers, for the debt on the 'Arboretum.' This debt, at the present time, amounts to about 2,400*l.*; and hence, if 350 additional Subscribers could be got, the debt would be at once liquidated, the works pledged for it set free, and Mr. Loudon or his family would enjoy the whole produce of his literary property." We trust this appeal will not be made in vain.

To this obituary record we may add, on the authority of the foreign journals, the death, on the 29th ult., at Neuwied-on-the-Rhine, after two days' illness, of apoplexy, of Sir William Thorn, author of 'The History of the War in India, under General Lord Lake;' and that of 'The Conquest of Java,' and other works: also the death of M. Feuillet, a member of the Academy of Moral and Political Sciences in Paris; and one other name—famous for attributes different from those which usually find a memorial in our columns, but seeming to claim an exceptional mention, on account of its historical place in the great events of the early part of this century, and still more because of the loud sound which it had, and whose echo lingers yet in the ears of the living generation—the Russian General Kutusow.

German papers announce the death, on the 10th of October, at Athens, of Dr. H. N. Ulrichs, Professor at the Otho University; known to antiquarians and classical scholars as the author of a volume of Travels in Greece, of which only one part, containing a description of Delphi, and his tour through Phocis and Bœotia, as far as Thebes, appeared. He also published many antiquarian and topographical dissertations, in different Journals and Transactions of learned societies. —They also mention that the naturalist Schimper, after having resided for six years in Abyssinia, has obtained for himself an excellent position with King Tbie, who has appointed him governor of an extensive district. He himself gives details on the subject in a letter, written from Ambasaa, and dated June 30, wherein he says: "I am now proprietor of a vast district, containing many thousand inhabitants, and over which I am sovereign, like a Count of the empire in the middle ages. But I am poor, for there is nothing in it but corn, arms, and cattle. Money is scarce, and I am unwilling to procure it by the violent means used by the great men of Abyssinia."—It is therein asserted, that the projected visit of Professor von Raumer to America, which we lately adverted to, is with a view to the completion of a History of the United States, on which the Professor has been for some time occupied.—The rage for monuments, in Germany, seems to grow by what it feeds on. In Darmstadt alone three are announced as in progress, to landgraves, or grand dukes of that petty sovereignty, none of whom are of any historical note, but who, nevertheless, serve to feed the reigning fancy of the day.—A medal has been struck to commemorate the opening of the railroad between Cologne and Aix; having on one side a bust of King Leopold, and on the other the allegorical figures of Prussia, Belgium, and France, with the legend, "War has parted, and peace united them." In the background are seen the Cathedrals of Antwerp and Cologne.

By strange accident, a discovery has been lately made of the original architects of Cologne Cathedral. It appears that the account-books (*Schreinbücher*), from the foundation of the building, are still preserved at Arnsberg, where they have lately been examined by Dr. Fahne, who finds the following names of architects, and dates of their superintendence:—

Heinrich Sunere, or Soynere, of Cologne (the first on the list)—1248-54.

Gerard von Rile (the name of a village a little below Cologne, on the Rhine)—1254-95.

Arnold—1295-1301.

John, his Son—1301-30.

Gerard, the second on the list, has been confounded with a certain Gerard of St. Trond, a Belgian, for whom, of late, the credit of founding this magnificent edifice has been claimed by his countrymen—in error, as it now appears.

The monumental record by which the people of Paris have at length bethought themselves of expressing their pride in Molière, is drawing to its completion. The fountain, with its ornaments, sculptural and architectural, is all but finished; and, a few days ago, was placed on the principal façade of the house, No. 34, in the Rue Richelieu, a frame of white marble enclosing, in gold letters on a black ground, an inscription, of which the English is as follows:—"In this house died Molière, on the 17th of February, 1673, at the age of 51." Above the inscription is the year 1844, enclosed within a crown of laurel.—The Barrière du Trône, and its columns, so long unfinished, are now also to be amongst the completed monuments of the French capital. Two colossal figures, by M. Desbœufs, representing, respectively, Victory and Peace, have been placed on the shaft of each column; and these are to be severally surmounted by bronze statues of St. Louis, by M. Etex, and Philip Augustus, by M. Dumont. The sculptures which are to adorn the pediments of the buildings, on each side of the gates, alone remain to be finished. A statue of Rossini, by M. Etex, is about to be erected in the vestibule of the Opera House.

At the Anniversary Meeting of the Royal Academy (the seventy-fifth), on Saturday last, the prizes were delivered to the following students. There was not a single candidate in the first class, Historical Painting! This, Mr. Jones (who presided as senior officer, in consequence of the indisposition of the President) attributed to the time of the students having been occupied in preparing the Cartoons:—

To Mr. E. B. Stephens, for the best composition in sculpture, the gold medal, and the Discourses of the Presidents Reynolds and West. To Mr. H. B. Garling, for the best architectural design, the gold medal, and the Discourses (as before). To Mr. J. Harwood, for the best copy made in the school of painting, the silver medal, with the Lectures of Professors Barry, Opie, and Fusell. To Mr. A. Ranckley, for the next best copy made in the painting school, the silver medal; but this student having received a similar medal in 1842, this medal, though adjudged to him, could not be given. To Mr. A. Solomon, for the best drawing from the living models, the silver medal: the only medal given in this class. To Mr. G. Perry, for a drawing of the west wing of Greenwich Hospital, the silver medal. To Mr. J. E. Millais, for the best drawing from the antique, the silver medal, and the Lectures of Professors Opie and Fusell. To Mr. G. E. Sutzenich, for the next best drawing from the antique, the silver medal. To Mr. J. Engel, for the best model from the antique, the silver medal, and the Lectures of Professors Opie and Fusell. To Mr. A. Gatley, for the next best model from the antique, the silver medal was adjudged, but not bestowed, as he had already (in 1842) received a similar medal. To Mr. W. Thomas, for the next best model from the antique, the silver medal.

The office of Principal of King's College, London, vacated by the elevation of Dr. Lonsdale to the Bishopric of Lichfield, has been conferred on the Rev. Dr. Jelf, Canon of Christ Church, Oxford, and late tutor to the Prince George of Cambridge. We may, at the same time, announce the appointment of Mr. Hullah as Vocal Professor in the same College. The Rev. Henry Melville has also, as we are informed, received the appointment of Principal of the H. E. C.'s College at Haileybury.

Messrs. Phelps, Anderson, and Keeley have, we understand, completed a contract with Mr. Arnold for the English Opera House, which is to be newnamed, the 'Theatre Royal, Wellington Street.' It is to be opened on New Year's Day.

The Royal Society of Lisle have offered a gold medal, of the value of three hundred francs, to the author of the best essay on the life and works of Jean Baptiste Wicar, the painter, a native of that city. The essays are to be sent to the president of the Society on or before the 15th of June, 1844.

By the reports of a meeting held at Leicester, on the 30th ult., we see that it is in contemplation of an influential body of Dissenters to establish a college for the Midland Counties (the town of Leicester being suggested as its seat), for the secular instruction of young men against whom the existing universities are closed; and embracing, at the same time, a class designed for the service of Christian missions, to the members of which it is proposed to communicate such a knowledge of medicine and simple surgery as may qualify them to subserve the physical interest of those among whom they may labour, and at the same time to afford such a knowledge of science in general as may enable them to promote the secular and commercial, as well as the spiritual interests of the people whom they may visit.

Will be shortly Closed.

DIORAMA, REGENT'S PARK.

The Two Pictures, now exhibiting, represent the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. REMOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Four.—N.B. The Gloria, from Haydn's Service, No. 1, will be performed during the midnight effect of the Cathedral of Notre Dame.

ROYAL POLYTECHNIC INSTITUTION.—BRILLIANT EFFECTS are produced by ARMSTRONG'S HYDRO-ELECTRIC MACHINE at three o'clock, and at Eight in the Evenings (except Saturday Evening). By LONGBOTTOM'S OPAQUE MICROSCOPE the singular Optical Illusion of converting a Matrix into the appearance of being a Cast in bold relief, is exhibited, with a variety of other curious effects. Particulars of the CHEMICAL and PHILOSOPHICAL LECTURES, which are delivered Daily, are suspended in the Hall of Manufactures. DISSOLVING VIEWS. DIVER and DIVING BELL. Numerous STEAM ENGINE and other MODELS at work. The original CRAYON DRAWINGS of RAPHAEL'S CARTOONS, &c. &c.—Admission, One Shilling.—Schools, Half-price.

SCIENTIFIC AND LITERARY

GEOLOGICAL SOCIETY.—*Nov.* 29.—The President, Mr. Warburton, in the chair.

Professor Sedgwick concluded his paper in continuation of the Memoirs on the Geology of North Wales, read June 21. The author maintains the threefold division of the older rocks. The middle division is now illustrated by more detailed sections, especially through different parts of the Berwyn chain. The first and principal section is from the porphyries of Arrenig across the lake of Bala, and over the crest of the Berwyns to Llangynog. The whole of this section is placed in a fossiliferous system, and the thickness of the beds actually associated with fossils is several thousand feet. The difference between this result and one stated by Mr. Sharpe, is accounted for, first, by a different computation of the thickness of certain beds about the position of which there is no doubt, and, secondly, by a different interpretation of phenomena, Mr. Sharpe terminating his section abruptly against a supposed fault, while Professor Sedgwick makes a regular ascending section, and places in the highest part of the series certain beds which Mr. Sharpe calls *Cambrian*, and regards as a part of a lower and non-fossiliferous group. In short, Professor Sedgwick extends his section among the fossil groups several miles to the east of the supposed line of fault of Mr. Sharpe. Other sections are described drawn through the southern part of the Berwyn, which is shown to rest on a great trough formed by the Bala limestone. The author then gives a general and detailed account of the physical structure of the whole Berwyn chain, which measured on the curved line of the water shed, is not less than thirty miles long. The whole crest of this chain, with the exception of about five miles, is composed of beds superior to the Bala limestone. The author then describes the sections on the east side of the Berwyns, and the section on the Ceiriog and the Dee, which connect the part of the protozoic group, which is the exact equivalent of the Caradoc sandstone, with the Denbigh flagstone, which represents the upper Silurian rocks of Mr. Murchison. After discussing the sections in detail he draws the following conclusions: 1. The base of the fossiliferous system is unknown, for beds (occasionally alternating with contemporaneous porphyries) of great thickness occasionally present fossil bands with *Asaphus Buchii*, &c. These are below the level of the limestone seen in the Arrenig section. 2. That the limestones near Bala (three of which are on the line of section, and one at a still lower level) contain fossils which point to a lower level than the Caradoc sandstone, and rather conform, especially in the lower beds, to the character of the Llandeilo flagstone. 3. That the higher part of the section on the Ceiriog conforms to the best types of the Caradoc sandstone, and passes into the system of the Denbigh flags. 4. That the lower Silurian beds in Westmoreland do not conform to the above type:—they may be compared with the upper part of the Ceiriog section, and perhaps with the *highest* part of the Arrenig section; but they admit of no comparison with the lower and by far the thicker part of the protozoic group of North Wales. Lastly, the author, as in a former paper, divides the upper Silurian rocks of Denbighshire, &c.

Digitized by Google

into three primary divisions or groups. The complicated Llangollen sections he puts entirely in the lowest of the three divisions. He confirms his former views by some new details and general remarks, accompanied by lists of fossils.

INSTITUTE OF BRITISH ARCHITECTS.—*Dec.* 4.—W. Tite, Esq. V.P., in the chair.—Mr. H. T. Wright was elected an Associate.—A paper was read 'On the Foundations of the late Church of St. Bartholomew, by the Exchange,' by C. R. Cockerell, Esq., showing the rude but efficient mode of construction adopted by our forefathers, and the masterly judgment and skill with which Sir C. Wren availed himself of the existing ancient foundations in his new structure after the fire. The piers in the east wall, as well as those under the pillars of the nave were raised upon a mass of well made concrete, formed of chalk, broken tiles, and stone, pebbles, and lime, cast about a foot deep into the stratum of sound gravel. Where arches were required, as in the east and north wall, the natural soil was left undisturbed, and formed into a rude centering from pier to pier on which the voussoirs of the arches in chalk were at once placed. From the springing of the piers, the masonry was of a superior kind, the centre, however, being filled in with concrete—the side walls of the church were of a better masonry with upright faces. The tower was built of flint and chalk, with walls of the thickness necessary to resist the action of the bells.

Mr. T. W. Papworth exhibited a volume containing a collection of decorations for a chapel in the Cathedral at Lisbon, made at Rome in 1755. It appears, from these drawings, that the architect sent his general designs to Rome, and that the details were there filled up by the most eminent decorative artists. The name of Pompeio Battoni, who was to supply some painting of the higher class, occurs among the number. There are designs for the pavements, railings, hangings, and every description of decoration and furniture to make the work complete. The artistical knowledge displayed in these drawings throughout the variety of operations necessary to carry out a work of this kind, and the unity of purpose with which it is brought together and applied, is the principal deficiency in our modern system of architecture.

MEETINGS FOR THE ENSUING WEEK.

FINE ARTS.

DECORATION.

House-Painting—(continued.)

IN the preceding paper we endeavoured to show that the *aspect* of the room should determine the choice of the general colouring of the decorations. This question being settled, the next to be considered is,—

Shall the colour chosen be used in tones dark or light —full or faint?

The supply of light, the size of the room, and its purpose, appear to be the chief circumstances which ought to regulate the strength or depth of the colours to be used. Where the light is strong, unobscured, and plentiful, the tone of the colouring may be full; on the other hand, where the supply of light is small, the tone of colouring should be light. In the houses of the ancients the strongest and darkest colours—even blacks, as we have already observed—were used on large surfaces, when the apartment received a direct and full light from above. Under a strong and abundant light, full-toned colours preserve their brightness and distinctive character, but when the light is feeble, and the supply of it limited, they become dull and gloomy. Full-toned colours lessen the apparent size of the room: light colouring enlarges it. A little attention to the proportion between the space to be coloured, and the depth of the colouring, becomes, therefore, of great importance. If you wish to make your room appear as large as possible, then exclude dark colouring, not only on the large surfaces, but even in the patterns of the paper-hangings, and in the mouldings and ornamental parts. The nature of the use to which the room is applied should also influence the decision as to the tone of colouring. If the room is used mostly by artificial light, which, being less pure than daylight, materially modifies the appearances of most colours—much or little, according to their strength—then keep the colouring light. If, on the other hand, it is a room for occupation during daylight, then the tone of colouring may be deep. Of the peculiar treatment which should be applied to colours when employed in the several sorts of domestic apartments, we shall speak more in detail hereafter. At present we have been dealing only with general principles, which cannot be recapitulated too often. First select the colours—warm or cold—active or passive, on the *plus* or *minus* side, as some writers call them respectively—according to the aspect; and next, remember that the depth or lightness of the colour ought to be no less subjected to regulation by certain principles.

The particular choice of colours seems to be the next branch of the subject to be examined, and on this point we would particularly refer the reader to Mr. Hay's work; but lest that work should not be at hand, we shall extract a few of the most practical and useful observations on each colour. In Mr. Eastlake's edition of Goethe's Theory of Colours, we also find many remarks on the peculiarities, influences, and associations of the principal colours, and as these remarks seem to us calculated to be of some use in directing the *selection of colours*, we shall abridge from Goethe's work those portions which appear applicable to the subject under consideration, omitting the more questionable and fanciful theories with which they are sometimes intermingled.

In respect of *White*, Mr. Hay says, that "in Symes' Nomenclature of Colours there are no fewer than eight different tints of white enumerated, and although the terms reddish white, &c. are rather anomalous, yet there seems to be no other way of denominating the lightest tints of colours. For instance, when the lightest tint of any colour is placed beside the most intense, it will appear to the eye a pure white, but when placed beside the purest white, the colour will appear with which it is tinged. Still, it should be understood, that if it be a single shade beyond the first remove or gradation from pure white, its name must be altered to a light tint of the colour with which it is tinged." A principle is here suggested, which is important in the treatment of most colours. They may be made to appear light or dark, positive or negative, by contrast. Mr. Hay suggests, that if white be used, the colours brought into contact with it "should be light and cool, amongst which grey and green are the most suitable. Very light yellow, of the tint of the primrose, forms also a pleasing arrangement with pure white. Where white is much used, the colouring of the furniture should be relatively light, and bamboo and satin wood are the best in respect of appropriate colour." Some years ago it used to be the fashion to use white and black in direct contrast. Panels painted white, with the beadings and mouldings picked out in black—most disagreeable in effect, and a practice that must be entirely avoided. If pure white is used, it suits best with a south aspect; but if a white is wanted in a north aspect, then it should be so far warmed in tone, as to be at least a cream colour. White is often used sparingly to contrast with violent colours in carpets and hangings; in such cases the effect is confused and crude.

Yellow, says Goethe, is the colour nearest light. In its highest purity it always carries with it the nature of brightness, and has a serene, gay, softly-exciting character. In this state, applied to dress, hangings, carpeting, &c. it is agreeable. "Gold, in its perfectly unmixed state, especially when the effect of polish is superadded, gives us a new and high idea of this colour; in like manner, a strong yellow, as it appears on satin, has a magnificent and noble effect. We find from experience, again, that yellow excites a warm and agreeable impression. Hence, in painting, it belongs to the illumined and emphatic side. This impression of warmth may be experienced in a very lively manner if we look at a landscape through a yellow glass, particularly on a grey winter's day. The eye is gladdened, the heart expanded and cheered; a glow seems at once to breathe towards us." The following assertion appears to us rather too broad in its application. There are surely circumstances, when the yellowish brown of the fallen leaf, as it is termed, might be most judiciously employed; but Goethe's account is rather more poetical than practical. He says, "When a yellow colour is communicated to dull and coarse surfaces, such as common cloth, felt, or the like, on which it does not appear with full energy, the disagreeable effect is apparent. By a slight and scarcely perceptible change, the beautiful impression of fire and gold is transformed into one not undeserving the epithet foul, and the colour of harmony and joy reversed to that of ignominy and aversion. To this impression the yellow hats of bankrupts, and the yellow circles on the mantles of Jews, may have owed their origin. As no colour can be considered as stationary, so we can very easily augment yellow into reddish, by condensing or darkening it. The colour increases in energy, and appears in red-yellow more powerful and splendid. All that we have said of yellow is applicable here in a higher degree. The red-yellow gives an impression of warmth and gladness, since it represents the hue of the intenser glow of fire, and of the milder radiance of the setting sun. Hence it is agreeable around us; and again, as clothing in greater or less degrees is cheerful and magnificent. A slight tendency to red immediately gives a new character to yellow, and while the English and Germans content themselves with pale yellow colours in leather, the French, as Castel has remarked, prefer a yellow enhanced to red; indeed, in general, everything in colour is agreeable which belongs to the active side. As pure yellow passes very easily to red-yellow, so the deepening of this last to yellow-red is not to be arrested. The agreeable cheerful sensation which red-yellow excites, increases to an intolerably powerful impression in bright yellow-red. The active side is here in its highest energy, and it is not to be wondered at that impetuous, robust, uneducated men should be especially pleased with this colour. Among savage nations the inclination for it has been universally remarked, and when children, left to themselves, begin to use tints, they never spare vermillion and minium. In looking stedfastly at a perfectly yellow-red surface, the colour seems actually to penetrate the organ. It produces an extreme excitement, and still acts thus when somewhat darkened. A yellow-red cloth disturbs and enrages animals. I have known men of education to whom its effect was intolerable if they chanced to see a person dressed in a scarlet cloak on a grey, cloudy day." In reference to this effect, we are inclined to ascribe great part of it to the strength of the contrast between the scarlet and the surrounding cool tones. Yellow is not distinguishable from white in most artificial lights, which are themselves of a yellow tone, and cause *white* to appear so yellow that it is undistinguishable from yellow; and though the fact is often recognized in the preference of lemon-tinted gloves over white, as they serve both for morning and evening wear, it is not so often remembered when papering a room, or selecting a chintz furniture. Mr. Hay recommends that both pure yellow and orange should be avoided in large masses, and used chiefly as heightening colours.

The colours on what Goethe calls the *minus* side, are *blue, red-blue, and blue-red.* "They produce a restless, susceptible, anxious impression. As yellow is always accompanied with light, so it may be said that blue brings a principle of darkness with it. As the upper sky and distant mountains appear blue, so a blue surface seems to retire from us. Blue gives us an impression of cold, and thus again reminds us of shade. It has some affinity with black. Rooms hung with pure blue, appear in some degree larger, but at the same time empty and cold." The blue room at the Reform Club again comes to mind as an illustration in point. The appearance of objects seen through a blue glass is gloomy and melancholy. Red-blue, in an attenuated state, or lilac, is pronounced to be 'something lively without gladness.' Blue-red generates an unquiet feeling. A carpet of a perfectly pure deep blue would be intolerable. "As the higher dignitaries of the church," continues Goethe, "have appropriated this unquiet colour to themselves, we may venture to say that it unceasingly aspires to the Cardinal's red, through the restless degrees of a still impatient progression."

"In *Red* we must forget everything that borders on yellow or blue. We are to imagine an absolutely

Digitized by Google

pure red, like fine carmine, suffered to dry on white porcelain. The effect of this colour is as peculiar as its nature. It conveys an impression of gravity and dignity, and, at the same time, of grace and attractiveness. The first in its dark deep state, the latter in its light attenuated tint, and thus the dignity of age and the amiableness of youth may adorn itself with degrees of the same hue. History relates many instances of the jealousy of sovereigns with regard to the quality of red. Surrounding accompaniments of this colour have always a grave and magnificent effect. The red glass exhibits a bright landscape in so dreadful a hue as to inspire sentiments of awe. The French prefer generally scarlet which inclines to yellow, whilst the Italians choose a crimson with a tinge of blue." The employment of red requires skilful management, and it is often used too indiscriminately. "We have only," observes Mr. Hay, "to look at nature for the proper use of this colour. We shall see that red seldom appears in its full intensity, and when it does so, it is at that season when its effect is balanced and neutralized by the general verdure which clothes the earth." Neither pure red nor scarlet should be used in large masses—it ought not to be contrasted with bright green unless in the smallest quantity. Where the direct light falls upon the ground, and not on the walls, Mr. Hay recommends a bright scarlet on the walls, heightened with gold, with deep-toned colours on the carpet. Crimson makes a capital background for the hanging of pictures, but care should be taken that its tint does not approximate to scarlet or pink. This approximation to pink is a common error. In the new decorations at St. James's Palace, now in progress, where the walls of the state rooms are covered with crimson flock paper, the colour is much too near pink.

Purple, though a good colour by daylight, is much injured and neutralized by artificial light. *Green* is the result of mixing blue and yellow. If mixed "in perfect equality, so that neither predominates, the eye and the mind repose on the result of this junction as upon a simple colour. The beholder has neither the wish nor the power to imagine a state beyond it. Hence, for rooms to live in constantly, the green colour is most generally selected." Goethe remarks, that "the juxtaposition of yellow and green has always something ordinary, but in a cheerful sense; blue and green, on the other hand, is ordinary in a repulsive sense. Our good forefathers called these last fools' colours." "The colours on the active side (yellow and yellowish) placed next to black, gain in energy; those of the passive (blue and blueish) lose. The active, conjoined with white and brightness, lose in strength, the passive gain in cheerfulness. Red and green, with black, appear dark and grave, with white they appear gay." We see these effects strikingly illustrated in book-wrappers. Black letter-press is applied indiscriminately to red, blue, lilac, green, and yellow covers. A publisher of taste, would do well to consider how much the purchase of a book is affected by the first impression it makes.

In the practical application of the foregoing observations to the colouring of surfaces, it seems to us that Nature herself suggests to us those parts

Where Colour shall be lightest—where darkest.

If we look at a landscape, we find three distinct gradations of colour. The greatest light comes from above, the next gradation of light lies in the part between the sky and the ground, and the darkest part is on the ground. The exceptions to this statement, arising from partial obscuration of the direct rays of light, and from reflexions, do not materially affect the principle here laid down, and which we think is applicable to the artificial use of colour in interior decoration. In accordance with it, we say, let the ceiling be the part *lightest* in colour and tone, the walls darker than the ceiling, the floor darker than the walls. The reverse is too often found in practice. In the Reform Club, the mouldings of the ceilings of the upper and lower quadrangles surrounding the great hall, and those of the upper library, are painted to imitate bronze, and in the quadrangles especially they are much heavier in colour and appearance, than the walls by which they are supported. In the drawing-room floor where the colouring of the frieze and festoons is light and mean, the ponderous look of the ceilings is objectionable. And here, though we are not considering especially the decorations of the Reform Club, we take the opportunity of remarking on the poverty of invention, not to say the contradiction, of colouring the ceiling of the lower quadrangle as if to represent blue sky, when it is palpable to the eye at the time, that it supports the floor of the passage above it. In the upper drawing-room of the same Club, the light maple-wood book-shelves are much less positive in colour than the beautiful ceiling above them, which is of bright blue, heightened with gilding between the bronze-painted divisions. Fortunately, the dark-green furniture and the deep crimson carpet in this room, are some balance against the full tones of the ceiling, or we should have here an example of the reverse of the principles which Nature seems to suggest. In the great drawing-room, it appears that the decorations are far more consistent. There the ceilings, being shades of white and light pink with gilding, are elegant and rich, yet lightsome and cheerful; less coloured than the walls, which are of a yellowish brown damask, the colour Goethe seems to reprobate, and the walls again are subordinate in the strength of their colouring to the floor, which is a deep-toned maroon in its masses. We are not unmindful of the full-toned colouring of the Venetian ceilings, which might be quoted apparently in opposition to what we have here advanced. For the present, without discussing particular instances of the practice of painting ceilings in intensely full tones, it is sufficient to point out, that what might be tolerated or even defended in the works of a Paolo Veronese, is not to be safely upheld as a precept for the common house-painter, whom alone, and not the poet-painter, we are attempting to influence. It may be as well to observe, that according to the depth of colouring in the ceiling, so the apparent height of the room is lowered and brought near to the eye: and, as in London houses, the height of the rooms is seldom suitably proportioned to the size of the room, this artificial lowering becomes a consideration, which ought not to be disregarded. Not only, to our mind, ought the ceiling to be the lightest in point of tone, but it ought to be the least decorated part of the room—What? venture to say this with Michael Angelo's Sistine Chapel in remembrance? Certainly—and we would call in evidence all who have seen this marvellous work, the strongest case perhaps that can be produced, to testify their regret, that those wondrous works are on the ceiling, and the extreme difficulty, no less than lying flat on the back, which is experienced in viewing them. But because we object to having the chief decoration on the ceiling,—the part obviously most difficult to see, we would not have it imagined that the ceiling is to be left bare, as it generally is in practice. On the contrary, we desire to see special attention bestowed on the—

Decoration of Ceilings,

and Mr. Barry is to be thanked for the good example he has set at the Reform Club, although some of the details do not seem, in our judgment, to be quite right. The coloured decoration of this part of a room, generally extends little beyond the tinting in one or two faint colours the cornice or the plaster ornament in the centre; though sometimes, indeed, we meet with the hideous practice of painting artificial skies and clouds—a miserable conceit, always to be eschewed. We are convinced, from actual experiments, that very effective and cheap decorations might be used in ceilings. The colouring of mouldings and cornices by the hand, and indeed all hand labour on a small scale, is slow, and therefore costly, but the plan we would recommend, and hope to see extensively used for the adornment of ceilings, is much more simple and easy of performance. Ceilings may be treated as easily as walls. Papers may be prepared expressly with suitable patterns, and they may be attached, afterwards, to the walls like common paper hangings. After making some little allowance for the extra trouble in affixing the paper to the ceiling, there seems to be no reason why the ornamental papering of ceilings should be more costly than that employed on the walls. In one experiment, we directed a paper surface of about ten feet in diameter to be prepared, which contained Pompeian forms expressed in four colours, and which cost, in its preparation, about forty shillings. Had the same design been executed in great numbers, there is no doubt that it might have been produced for half the money, or even less. On the other hand, had the design been painted on the ceiling itself, by the hand, the cost would have been much increased. The economy of the process of affixing the ornament in a large surface at once to the ceiling, is obtained precisely on the same principle as that of laying the tesseræ in blocks on pavements, according to Mr. Singer's patent, instead of laying tesseræ one by one on the floor.

Leaving out of the account the additional beauty which tasteful colouring on the ceiling confers on a room, we would recommend the practice as economical—a charm oftentimes more attractive in these money-making times than beauty itself. In the course of every three or four years, the ceiling of a London house requires re-colouring. There is little doubt that the determined lines of the positive colouring in an ornamental design, and also the paper itself, would tend very much to conceal the ordinary cracks and markings in the ceiling, caused by the dirt and smoke, and thus reduce the necessity of re-colouring. In addition to the experiment already mentioned, we had a simpler one prepared in two shades of deep straw-colour, for the centre of a room, the cost of which experiment was only five shillings. In the prosecution of these experiments, it is only just to mention that we had the assistance of Mr. Clarke, a paper-stainer, of 60, High Holborn, who seemed well disposed to carry them much farther, if any public taste could be generated for them. In the preparation of decorations for ceilings, and until we can enter upon the subject of pattern in detail, a word of caution may be whispered against all and every sort of imitation of raised surfaces. Let there be no sham cornices or rosettes for centres—no sham festoons, draperies, or tassels. Whatever is done, should be limited to the expression of agreeable forms in colour, and much more effect may be produced under this limitation than is generally obtained by the plaister mouldings and ornaments themselves which are commonly attached to ceilings. The choice of the colours and peculiar treatment of them in ceilings must, of course, be regulated by the circumstances of the room, and the character of the decorations used in it.

The particular treatment of colours which should be applied to rooms of various purposes, seems to follow next in order for consideration. We are much disposed to agree with Mr. Hay, when he insists that the decorations of rooms should be subordinate in importance to the furniture, which he appears to regard in the same relative importance to a room as figures stand towards a picture. Mr. Hay says:—"In toning and harmonizing the colours in a picture, an artist has the assistance of light and shadow, and can make his shades accord with the tone in such a manner as to improve the general harmony; but as the colours of the house-painter and manufacturer are all liable to be placed in full light, they must be toned in themselves, to prevent that unnatural crudeness so annoying to the eye. How, then, can we account for the prevalence of those gaudy paper-hangings, which impinge the most obtrusive rays in all their vigour, or those carpets where the preponderance of bright yellow and red attracts the eye, and injures the effect of everything which is placed upon them? And if, according to the rules which regulate the higher branches of art, simplicity of arrangement prevents confusion where a variety of colours are introduced, the colours in the generality of such articles are most erroneously arranged. These rules must proceed from a general negligence of the rules of harmony. I do not mean by this that bright and vivid colours are always offensive. I have already said, that they add richness and grandeur when used in their proper places and in proper quantities; but they should by no means cover the floor or walls of an apartment unless under very peculiar circumstances. It may here be observed, that in all pictures representing interiors, when a group of figures is introduced, there may occasionally appear a piece of rich drapery, or furniture painted in equally vivid and bright colours with the figures, and which may, in a great measure, improve the general effect and harmony; but who ever saw, in a work of merit, the colours on the walls of the apartment or carpet on the floor making a monopoly of attraction, and causing those upon the figures and furniture to sink into insignificance?" But we have no more space at present, and the suggestions touching the appropriate colouring of particular rooms must be reserved to a future opportunity.

MUSIC AND THE DRAMA

Concerts of the Christmas Season.—Our musical year seems preparing to go out "like a lamb." The "star" singers, lamentably diminished in number by recent marriages and departures, are wandering through the provinces, or repeating their old songs in London concerts: and everything like effort or novelty seems to have been put aside by common consent till a more propitious season. The meetings held in Crosby Hall, for the purpose of giving the citizens cheap and good sacred music, however commendable in themselves—the more trade-like and unsatisfactory performances in Store Street—cannot supply the place of those exhibitions making *progress* either in composition or executive skill, which ought to be found in every metropolis aspiring to taste or connoisseurship in Art. Not long since the Londoner thought it enough to spend his money on music—small matter of what quality. "Those whom it may concern" inform us that he is no longer so ready with his purse, but the signs of an improved judgment on his part which would make such caution welcome, are still few. Are we then to have neither music nor taste? Patience: we firmly believe that the latter is spreading, and will spread faster when the *prestige* of Fashion's foolish patronage shall have ceased to influence the middle-classes, which will be when their own education becomes sounder and more liberal. But our artists must not merely wait the while; they ought to advance, in humility, in industry, and in renunciation of *coterie*, to be ready for better days.

We prefer offering these general remarks to anatomizing the music of London during the past ten days: a remark, or two, however, are called for. The very beautiful sacred song, by Mr. E. Loder, 'My soul is sorely vexed,' performed at Madame Dulcken's second *Soirée*, gives us occasion to ask, why this composer's music is so sparingly brought forward by the *British Musicians:* we are sorry that it also gives us occasion to inquire of Miss Marshall, when she means to improve—pretension will no longer pass for feeling: nor is her want of execution counter-balanced by any remarkable beauty of tone. We, among others, augured so well of this young lady, in days past, that we cannot allow her to sink into indifference without reminding her, that success, never easy to attain, is now more difficult than ever.

Another sign of the musical times is becoming too strong to be overlooked: this is the popularity of those mixed exhibitions, in which anecdote and music bear an equal part—a fashion revived by Mr. Wilson, continued by Messrs. Horncastle and Crouch, and now daily spreading. These exhibitions are agreeable in proportion as they have a meaning: and it is not extraordinary that those of our stage-singers who feel unwilling, or unequal, to the increased dramatic requisitions of our opera-goers, should resort to them as a profitable means of keeping before the public. At all events, in addition to Mr. and the Misses Fraser's Scottish entertainment, and Messrs. Carpenter and Jones's 'Night with Robin Hood,' and Mr. Leo's performances of Hebrew melodies, recitations, and chants. Mr. Templeton announces an evening to be devoted to 'Mary Queen of Scots and the music of her times.' Whence did our worthy tenor gather this? Had he more modestly promised 'Music illustrative of the Queen's story,' it had been more true. The impending musical entertainment of Mr. H. Phillips, however, is still more remarkable. First come the 'Songs of Charles Dibdin' with introductory observations, the selection little calculated to do justice to our melodist, however it may suit the vocal predilections of the singer. But the second part of the entertainment is to be a yet stranger *olla podrida*, beginning with the 'Life of Sir Walter Raleigh,' going thence to the 'Lake of Killarney,' dipping next into Waller, and subsequently into Izaak Walton, then trifling with Lover's 'Molly Bawn,' then penultimately torturing poor Herr Marschner's drinking quartett from 'The Vampire,' into a *solo* (with introductory observations on '*The* German's seasons for hilarity, the great tun of Heidelberg, Dr. Aldrich's reasons (?), the inefficiency of translations in general'), winding up with a Robin Hood ballad! There must be a sequence and a purpose in this arrangement, or why should not the songs be gone through as in a regular concert, without waste of words?—but we are at a loss to perceive them, and till we do, cannot recognize the artistic interest or usefulness of the exhibition.

MISCELLANEA

Paris Academy of Sciences.—Nov. 27.—A communication was made relative to the telescopic comet, which was discovered a few nights previously at the Paris Observatory, by M. Faye. It was stated that on the night of the 26th it was twice seen, and in such a way that it would be possible to calculate its orbit, so as to say whether it is a new comet, or one that has already been recorded.—M. Biot read a paper on the identity of the modifications imparted to polarized light by fluid bodies, whether in a state of motion or repose.—M. Duvernoy read some notes on the fossil giraffe of Issoudun. From the various facts collected by M. Duvernoy, there is little doubt that the giraffe was at some former period a native of both Europe and Asia.—M. Ackerman, a surgeon of the navy, read a paper on the little animal called the *coipo*, of Chili, which many persons have supposed, from the extraordinary accounts given of it, to be fabulous. M. Ackerman, however, has sent several specimens, preserved in spirits of wine, to M. Lereboullet, a professor of natural history at Strasburg, who has dissected them. The most extraordinary parts of this animal, which is partly of the beaver species, are its mammiferous organs, which are placed upon the back. The *coipo* inhabits small lakes and deep ponds, in which there are reeds. It never leaves its haunts except when the sun or the moon is shining. In sunshine it forms a sort of raft of reeds, on which it sleeps for hours.

Colonel Stoddart and Capt. Conolly.—The pleasant intelligence which we announced last week, as received from Sir Stratford Canning, rests, it appears, on information received from Mr. Layard, who thus writes to Mr. Wolff.—"I have much pleasure in informing you that I have received additional accounts of Messrs. Stoddart and Conolly, and that all these accounts tend to prove that those gentlemen are still alive. As far as Colonel Stoddart is concerned, I do not now feel a doubt but that he was alive four or five months ago. I have learned to-day that a native of Bokhara, who quitted the city about five months ago, states that he was well acquainted with an Englishman there who had turned Mussulman; that he enjoyed perfect liberty, and was not only permitted to live in the city, but was furnished with money and all necessaries by the principal people of Bokhara. On being asked the name of this Englishman, he wrote on a slip of paper, after having endeavoured to explain *vivâ voce*, Astordis, or Stordas. It must be remembered that the person through whom these inquiries were made was ignorant both of the name of Colonel Stoddart and of all circumstances connected with his imprisonment, &c. The person who furnished this account is unable to state what became of Conolly, but he has no reason to believe that he was put to death. I have already informed you that I have ascertained, from persons who quitted Bokhara above a year ago, that both these gentlemen were then alive. All the accounts I have received agree in this one respect; and although I have now inquired indirectly of many natives of Bokhara, not one has yet stated that either has been put to death. Is it, therefore, still credible that a public execution should have taken place unknown to some of the principal inhabitants of the city?"

New Colour.—In your last number you have a paragraph respecting a new vegetable black dye, used by the natives of the Shan* country of India; which has been examined by Mr. Hume, Hon. Secretary of the Agricultural Society of India, who describes it thus: "It is of a jet black colour, extremely hard, and very refractory in its re-action with the most powerful chemical agents—sulphuric and nitric acids, with the caustic alkalies, having little effect upon it: it was found to contain a quantity of iron and earthy matter, the exact amount of which has not been ascertained. Mr. Lander, the enterprising individual who discovered the dye, has forwarded specimens to the Society of Arts, and an eminent chemist, a member of the Society, has undertaken to analyze the substance as far as practicable with so minute a specimen. I am, &c. Francis Whishaw, Secretary

Society of Arts, Adelphi, 14th Dec.

Epitaphs.—The following is inscribed on a tombstone in the church-yard of Steddon, in Holderness.—"Hear lyes the body of W. Stenton of Patrinton: he was buried the 28th of May 1685, aged 79 years. He had children by his first wife 38—by his second 17: own father to 45, and grandfather to 86—great grandfather to 97—great great grandfather to 230—he lived to see of his own generation 251."

Punch, as our readers know, is a favourite with the *Athenæum*. We patted him on the back when a youngster, gave him encouragement in his riper years, or months, and have ever since rejoiced over him. His ridicule is wholesome, finely tempered, and reserved for the unworthy—not the unfortunate; his sympathies are large and liberal; and he has done, and is doing, infinite good. Would, we say, that the tone of the following song "could reach the rich!"—

The Song of the Shirt.

With fingers weary and worn,
With eyelids heavy and red,
A woman sat, in unwomanly rags,
Plying her needle and thread—
Stitch! stitch! stitch!
In poverty, hunger, and dirt,
And still, with a voice of dolorous pitch,
She sang the "Song of the Shirt!"

"Work! work! work!
While the cock is crowing aloof!
And work—work—work,
Till the stars shine through the roof!
It's O! to be a slave
Along with the barbarous Turk,
Where woman has never a soul to save,
If this is Christian work!

"Work—work—work,
Till the brain begins to swim;
Work—work—work,
Till the eyes are heavy and dim!
Seam, and gusset, and band,
Band, and gusset, and seam,
Till over the buttons I fall asleep,
And sew them on in a dream!

"O! Men, with Sisters dear!
O! Men, with Mothers and Wives!
It is not linen you're wearing out,
But human creatures' lives!
Stitch—stitch—stitch,
In poverty, hunger, and dirt,
Sewing at once, with a double thread,
A Shroud as well as a Shirt.

"But why do I talk of Death—
That Phantom of grisly bone,
I hardly fear his terrible shape,
It seems so like my own—
It seems so like my own
Because of the fasts I keep,
O, God! that bread should be so dear,
And flesh and blood so cheap!

"Work—work—work!
My labour never flags;
And what are its wages? A bed of straw,
A crust of bread—and rags,
That shatter'd roof—and this naked floor—
A table—a broken chair—
And a wall so blank, my shadow I thank
For sometimes falling there!

"Work—work—work!
From weary chime to chime
Work—work—work,
As prisoners work for crime!
Band, and gusset, and seam,
Seam, and gusset, and band,
Till the heart is sick, and the brain benumb'd,
As well as the weary hand.

"Work—work—work!
In the dull December light,
And work—work—work,
When the weather is warm and bright—
While underneath the eaves
The brooding swallows cling,
As if to show me their sunny backs,
And twit me with the spring.

"Oh! but to breathe the breath
Of the cowslip and primrose sweet—
With the sky above my head
And the grass beneath my feet,
For only one short hour
To feel as I used to feel,
Before I knew the woes of want,
And the walk that costs a meal!

"Oh! but for one short hour!
A respite however brief!
No blessed leisure for Love or Hope,
But only time for Grief!
A little weeping would ease my heart,
But in their briny bed
My tears must stop, for every drop
Hinders needle and thread!"

With fingers weary and worn,
With eyelids heavy and red,
A woman sat, in unwomanly rags,
Plying her needle and thread—
Stitch! stitch! stitch!
In poverty, hunger, and dirt,
And still with a voice of dolorous pitch—
Would that its tone could reach the Rich!—
She sang this "Song of the Shirt!"

* *Shan*, not Shand.

THE CYCLOPÆDIA of POPULAR MEDICINE.

By KEITH IMRAY, M.D. M.R.C.S. Ed.
Fellow of the Royal College of Physicians of Edinburgh, &c.

"Dr. Imray's book is intelligibly and clearly written, and is worth ten thousand of those ordinary Family Medical Instructors that it would be difficult not to detect in some corner or other of almost every country house."—*Examiner.*

"All persons for whose guidance the present Cyclopædia is designed may consult it with the most perfect confidence. The descriptions of disease are sufficiently plain to be understood by any layman of moderate intellect; they are couched in simple language, devoid of technical terms; the most prominent symptoms are alone dwelt upon, and theories are, as much as possible, carefully avoided; the rules of treatment are judiciously laid down—the counsels of an experienced and observant physician; in a word, we would say that the 'Cyclopædia' is an excellent manual of the practice of medicine, translated into the vernacular."—*P. Medical Journal.*

"We conscientiously recommend this book as the best and only one that will supply, in all respects, the want of a scientific treatise on popular medicine, which has long been felt by those to whom this work is addressed. To the clergy, therefore, who feel it their duty to know in some degree the principles and practice of medicine, in order that they may administer relief, in slight cases, amongst their parishioners, and, in cases of emergency, before the arrival of proper medical assistance—to foreign missionaries, to settlers in the new colonies, to captains of vessels, to heads of schools, and families—to each and to all, we would strongly recommend this admirable work."—*Church of England Quarterly Review.*

THE INFLUENCE of RESPECT for OUTWARD THINGS: in Two Dialogues. Dialogue I. On Respect for Outward Things in relation to Virtue and Happiness. Dialogue II. On Respect for Outward Things in relation to Religious Profession.

"This is a brief practical inquiry into the moral principles which actuate modern society, and a calm exposure of many of the current fallacies by which men regulate their conduct."—*Tait's Magazine.*

"The author of this little work is evidently a strong and original thinker, and he deserves credit in general for just views of the present condition of human society, and the remedies which should be adopted for its improvement."—*Christian Reformer.*

"The author of this little volume, Mr. John Taylor, is a man who feels deeply the evils of our present social condition, and is anxious to contribute something towards their remedy. No candid reader, we think, will deny him sincerity, benevolence, and earnest thought on a most important subject."—*Inquirer.*

London: Charles Fox, 67, Paternoster-row.

PROPORTION, or the GEOMETRIC PRINCIPLE of BEAUTY ANALYSED. By D. R. HAY, Decorative Painter to the Queen, Edinburgh. In royal 4to. with 17 Plates and 38 Woodcuts, price 25s.

Lately published, by the same Author,

I.

The Natural Principles and Analogy of the Harmony of Form. In royal 4to. with 18 Engravings and Woodcuts. Price 15s.

II.

The Laws of Harmonious Colouring adapted to Interior Decorations. The 4th edition, with 8 coloured Diagrams, 8vo. Price 7s.

"In so far as we know, Mr. Hay is the first and only modern Artist who has entered upon the study of these subjects without the trammels of prejudice and authority. Setting aside the ordinances of fashion, as well as the dicta of speculation, he has sought the foundation of his profession in the properties of light, and in the laws of visual sensation, by which these properties are recognized and modified. The truths to which he has appealed are fundamental and irrefragable; and the conclusions which he has deduced from them will admit of no modification either from taste or fashion. Notwithstanding some trivial points of difference between Mr. Hay's views and our own, we have derived the greatest pleasure from the perusal of these works. They are all composed with accuracy and even elegance. His opinions and views are distinctly brought before the reader, and stated with that modesty which characterizes genius, and that firmness which indicates truth."—*Edinburgh Review*, October, 1843.

William Blackwood & Sons, Edinburgh, and 22, Pall Mall, London.

William Tite, Esq. F.R.S. *Deputy Chairman.*
George Carr Glyn, Esq. *Treasurer.*
Established 1803.

For FIRE and LIFE INSURANCE, and ANNUITIES, and the PURCHASE of REVERSIONS and LIFE CONTINGENCIES.

CAPITAL, ONE MILLION STERLING.

The whole paid up and invested, and entirely independent of the amount of premiums received.

Rates and Conditions of Fire and Life Insurance, or other information, may be obtained at the Offices in London, and of the Company's Agents in the Country; and where Agents are not appointed, persons in active life, and desirous of the appointment, may apply to the Secretary.

Fire Policies due at Christmas must be paid on or before the 9th of January.

By order of the Board,
JOHN CHARLES DENHAM, Secretary.

London, Dec. 1843.

VICTORIA LIFE ASSURANCE COMPANY.

Trustees.

Sir Jas. Duke, Ald. M.P. *Chairman* | Benj. Hawes, Esq. *Dep. Chairman*
Benj. Barnard, Esq. | Charles Baldwin, Esq.

Peculiar advantages are offered by this Company. Thus:—

Parties assuring the lives of others may make their policies secure, notwithstanding the life assured may go out of the limits of Europe, without the necessary permission of the Directors having been previously obtained.

Credit of half the premiums for the first five years allowed on policies effected for the whole term of life.

Assurances may be effected *with* or *without* profits—on an ascending or descending scale, or for short periods.

Advances made to Assurers on real or undoubted personal security, for terms not exceeding three years, repayable by instalments.

Attention is particularly requested to the detailed prospectuses of the Company, which may be obtained at the Office, 18, King William-street, City, or by letter, addressed to the Secretary. WILLIAM RATRAY, Actuary and Secretary.

YORK AND LONDON LIFE ASSURANCE COMPANY, King William-street, London. Empowered by Act of Parliament.

Directors.

George Frederick Young, Esq. *Chairman.*
Matthew Forster, Esq. M.P. *Deputy Chairman.*

The superiority of the system of Assurance adopted by this Company will be found in the fact that the premium required by a bonus office to assure 1,000*l.* on the life of a person in the 20th year of his age, would in this office insure 1,291*l.* 7*s.* 6*d.*

Assurances at other ages are effected on equally favourable terms, and thus the assured has an immediate bonus instead of a chance dependent upon longevity and the profits of an office. In cases of assurance for a limited number of years, the advantage offered by this Company is still greater, no part of the profits of a bonus office being ever allotted to such assurances.

Prospectuses, containing tables framed to meet the circumstances of all who desire to provide for themselves, or those who may survive them, by assurance, either of fixed sums or annuities, may be had at the Office, as above, or of the agents.

J. REDDISH, Secretary.

UNIVERSAL LIFE ASSURANCE SOCIETY,
1, KING WILLIAM-STREET, LONDON.

Directors—Sir Henry Willock, K.L.S. *Chairman.*
John Stewart, Esq. M.P. *Deputy Chairman.*

Major-Gen. Sir Rd. Armstrong, C.B. K.C.T. & S.	William Kilburn, Esq.
John Bagshaw, Esq.	Francis Macnaghten, Esq.
Augustus Bosanquet, Esq.	Charles Otway Mayne, Esq.
Charles Dashwood Bruce, Esq.	Robert Saunders, Esq.
Ellis Watkin Cunliffe, Esq.	James Duncan Thomson, Esq.
Raikes Currie, Esq. M.P.	Capt. Samuel Thornton, R.N.

Solicitor—William H. Cotterill, Esq.
Physician—George Burrows, M.D.

The principle adopted by the Universal Life Assurance Society of an annual valuation of assets and liabilities, and a division of *three-fourths of the profits* among the assured, is admitted to offer great advantages; especially to those parties who may wish to appropriate their proportion of profit to the reduction of future premiums.

The following table will show the result of the last division of profits, as declared on the 10th of May, 1843, to all persons who had on that day paid six annual premiums:—

Age when Policy was issued.	Date of Policy.	Sum Assured.	Original Premium.	Reduced Annual Premium (for the current year).
20	On or before 10th of May, 1838.	£1,000	£19 6 8	£9 13 4
30		1,000	24 8 4	12 4 2
40		1,000	31 10 0	15 15 0
50		1,000	42 15 0	21 7 6
60		1,000	66 11 8	33 5 10

DAVID JONES, Actuary.

WESTERN LIFE ASSURANCE SOCIETY,
49, Parliament-street, Westminster.—Capital 500,000*l.*

Directors.

Henry Edgeworth Bicknell, Esq.	James Hunt, Esq.
William Cabel, Esq.	John Arscott Lethbridge, Esq.
Thos. Somers Cocks, jun. Esq.	Edmund Lucas, Esq.
George Henry Drew, Esq.	George Kennet Pollock, Esq.
William Evans, Esq.	James Lys Seager, Esq.
William Freeman, Esq.	John Bazley White, Esq.
Francis Fuller, Esq.	Joseph Carter Wood, Esq.
Joseph Henry Goodhart, Esq.	

Physician—William Richard Basham, M.D.
Surgeons—Alfred Leggatt, Esq.; George D. Pollock, Esq.
Bankers—Messrs. Cocks, Biddulph & Co.
Solicitors—Messrs. J. L. Bicknell and J. C. Lethbridge.

The leading features of this Society are—

The very moderate Rate of Premium when viewed as combined with *perfect security* to the assured.

The advantage to the Assurers (by Table 2) of becoming entitled to *three-fourths* of the *profits.*

The assurance of a *certain bonus.*

The facility for *securing debts.*

The allowance of *half* the Annual Premium to remain unpaid for *seven years*, and

The accommodation of *temporary loans* to the Assured on available security. Immediate and deferred Annuities are granted by this Society on terms advantageous to the Public.

A liberal Commission allowed to Professional Gentlemen and Agents introducing business to the Office.

EDWARD T. RICHARDSON, Secretary.

Digitized by Google

ECONOMIC LIFE ASSURANCE SOCIETY,

No. 34, Bridge-street, Blackfriars, London: established 1823. Empowered by Act of Parliament, 3 William IV.

Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits.

The bonus declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1839 a second bonus was declared, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.

Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.

CAMPBELL JAMES DOWNER, Sec.

PELICAN LIFE ASSURANCE OFFICES,

70, Lombard-street, and 57, Charing-cross.—Established 1797.

Directors.

Matthias Attwood, Esq. M.P.	Sir W. Heygate, Bart.
W. Stanley Clarke, Esq. F.R.S.	Kirkman D. Hodgson, Esq.
John Coope, Esq.	R. Henshaw Lawrence, Esq.
William Cotton, Esq. F.R.S.	J. Petty Muspratt, Esq.
Sir William Curtis, Bart.	George Shum Storey, Esq.
William Davis, Esq.	C. Hampden Turner, Esq.
J. A. Gordon, Esq. M.D. F.R.S.	Matthew Whiting, Esq.

The Plan of this Office will be found to comprise all the Solid Advantages of Life Assurance.

Persons have the option of Insuring upon the Return or Non-Return Systems; and the Tables, which include Ascending and Descending Scales of Premium, have been framed to suit the convenience of all parties.

The Rates have recently been reduced agreeably to the most approved calculations; they are also verified by the experience of the Office during Forty Years, and are as low as consistent with safety; those adapted to the RETURN SYSTEM entitle its assured to an equitable participation in the surplus premium, according to the plan detailed in the Company's prospectus.

The Assured under both Systems will possess the guarantee of a large PAID-UP Capital, and the further security of a responsible body of Proprietors, without being exposed to the liabilities of partnership.

Policies are purchased on liberal terms when the object of an assurance is effected;—or, loans will be granted thereon to the extent of five-sixths of such purchase-money.

Prospectuses and every information obtained on application at the Offices as above, or to the Agents of the Company appointed in every City and principal Town in the Kingdom.

R. TUCKER, Secretary.

UNITED KINGDOM LIFE ASSURANCE

COMPANY, 8, Waterloo-place, Pall Mall, London.
Division of Profits among the Assured.

Honorary Presidents.

Earl of Errol	Earl Somers
Earl of Courtown	Lord Viscount Falkland
Earl Leven and Melville	Lord Elphinstone
Earl of Norbury	Lord Belhaven and Stenton.
Earl of Stair	

Directors—Jas. Stuart, Esq. *Chairman.*
Hananel De Castro, Esq. *Deputy Chairman.*

Samuel Anderson, Esq.	Charles Graham, Esq.
Hamilton Blair Avarne, Esq.	F. Charles Maitland, Esq.
Edw. Boyd, Esq. *Resident*	William Railton, Esq.
E. Lennox Boyd, Esq. *Assist. Resident*	John Ritchie, Esq.
Charles Downes, Esq.	F. H. Thomson, Esq.

Secretary—Patrick Macintyre, Esq.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834. In 1841, the Company declared an addition to the Shareholders of one-half of their Stock, and also added 2*l.* per cent. per annum, from the date of the policies to those parties who had insured with profits. The premiums, nevertheless, are on the most moderate scale, and only a moiety need be paid for the first five years, where the Insurance is for life.

The amount of bonus added to policies since the commencement of the Company in March, 1834, to the 31st Dec. 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13 4
1000	4 Years	80 0 0
1000	3 Years	60 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq. and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq. *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past 2.

THE DISSENTERS' and GENERAL LIFE and FIRE ASSURANCE COMPANY. Established 1837.

Empowered by Special Act of Parliament, 3 Vic. c. 20., 62, King William-street, London Bridge, London; 21, St. David-street, Edinburgh; 6, King-street, Queen-square, Bristol; and St. Andrew's Hall, Plain, Norwich.—Capital, One Million.

Trustees and Directors.

George Bousfield, Esq.	Thomas Piper, Esq.
Thomas Challis, Esq. & Ald.	Sir John Pirie, Bart. and Ald.
Sir J. Easthope, Bart. M.P.	Thomas B. Simpson, Esq.
Peter Ellis, Esq.	Edward Smith, Esq.
Joseph Fletcher, Esq.	Hon. C. P. Villiers, M.P.
Richard Hollier, Esq.	John Wilks, Esq.
Charles Hindley, Esq. M.P.	Edward Wilson, Esq.

At the annual meeting in May last, not only was an increased dividend to proprietors announced on the capital advanced by them for public protection against contingencies, but to life-assurers, under Table No. II., a bonus of 12 per cent. on the gross premiums paid was declared, with a further bonus of 10½ per cent. to ministerial assurers, making to such of them as were assured on the terms of Table No. II. a total bonus of no less than 22½ per cent.

The following is a brief summary of the distinctive features of the Company:—

1. One-tenth of the entire profits is appropriated, by the Deed of Settlement, to reducing the premiums, payable for insuring the lives of dissenting and methodist ministers, or in other ways similarly beneficial to their families.

2. Certificates of age and character, and of the amount of loss, in case of fire, from clergymen and churchwardens not required, as by many offices.

3. A table of premiums for policies, payable at the age of sixty, suitable to the case of superannuated ministers, or of other professional men.

4. The lowest rates of premium consistent with security, and the payment of policies, guaranteed by a capital of one million.

5. Two tables of premiums, the one giving an interest in the profits of the Company to the life assurers.

6. Every facility given, on moderate terms, to persons going beyond the prescribed limits of their policy.

7. Premiums may be paid either annually, half-yearly, or quarterly, in a limited number of payments, or in one sum.

8. Loans advanced on policies of the value of 50*l.*

9. All claims payable three months after satisfactory proof of death; or earlier, on deduction of discount.

10. No entrance-fee required.

Loans, also, are granted, on equitable terms, to life assurers on life interests, and on real or satisfactory personal securities.

A liberal allowance to solicitors, surveyors, auctioneers, and agents in town and country. By order of the Board,

THOMAS PRICE, Sec.

DISEASED AND HEALTHY LIVES ASSURED.

MEDICAL, INVALID, and GENERAL LIFE

OFFICE, 25, Pall Mall, London. Capital 500,000*l.* This Office is provided with very accurately constructed Tables, by which it can Assure Diseased Lives on Equitable Terms. Increased Annuities granted on *unsound* Lives, the amount varying with the particular disease. Members of Consumptive Families assured at Equitable Rates. Loans granted upon personal security. F. G. P. NEISON, Actuary.

RECONNOITERING TELESCOPES.—These

beautiful instruments are peculiarly adapted for military gentlemen, tourists, &c. Their exceeding portability, measuring only 3½ inches when closed, and their admirable performance (showing distinctly Jupiter's moons), have given the greatest satisfaction. The price, 35*s.*, sent by post for 1*s.*—To be had of the Maker, J. DAVIS, Optician, Derby.

A. M. PERKINS'S PATENT HOT-WATER APPARATUS, FOR WARMING AND VENTILATING.

FOR the successful operation of the above Plan, references may be made to the British Museum, the Chapels Royal, Whitehall and St. James's, Marlborough House, and Whitley Court, the residences of Her Majesty the Queen Dowager, his Grace the Archbishop of Canterbury's Palaces at Lambeth and Addington; his Grace the Duke of Beaufort's at Badminton; his Grace the Duke of Wellington's at Strathfieldsaye; his Grace the Duke of Hamilton's Palace at Hamilton; the Lord Chancellor's and Vice-Chancellor's Courts at Westminster and Lincoln's Inn; the Insolvent Debtors Court; the Old Bailey Sessions House; School of Design and Tithe Commissioners' Offices, Somerset House; Register of Designs and Record-office; Lincoln's-inn and Gray's-inn Chapels; Inner Temple Hall; County Fire Office; Register Office and Justiciary Courts, Edinburgh; Charles Babbage's, Esq. Dorset-street, Manchester-square; and many other Private Residences, Public Buildings, Churches, Hospitals, Lunatic Asylums, Union Poor Houses, Prisons, Hothouses, Conservatories, &c. &c.

Manufactory, No. 6, Francis-street, Gray's-inn-road.

LAMPS.—PERRY'S IMPROVED RING-

LAMP (registered per Act 6 and 7 Vict.) possesses the following great and peculiar advantages. *Every part* of the *interior* can be thoroughly cleansed, so essential to the burning well of either sperm or (especially) common oil. A deficiency of oil can be ascertained, while the lamp is burning, by merely pushing the ivory studs; and fresh oil supplied, without risk of spilling it over the table, &c. Sold (with or without the pedestals) by Perry & Co. Lamp and Lustre-makers to the Queen, 72, New Bond-street.

TO THE CLERGY AND CHURCHWARDENS.

THE Subscriber respectfully intimates that he is now able to execute orders for Altar Cloths, Communion Linen, Surplices, and Ecclesiastical Carpets, exactly copied from ancient examples, and suited in material and price for Village Churches, *at one day's notice*. Parcels free to London, Birmingham, York, and Liverpool.—Altar Cloths of Velvet, with Embroidery in Gold, prepared to order in fourteen days.—Specimens at No. 13, Henrietta-street, Covent-garden.

GILBERT J. FRENCH, Bolton-le-Moors, Lancashire.

THE RESPIRATOR.—WILLIAM JACKSON,

City Agent (Successor to the late George Butler), solicits inspection of his complete assortment of these philosophical and eminently useful Instruments for protecting the Lungs, and affording an easy respiration to those invalids to whom the breathing of cold air is distressing and injurious. A Circular, descriptive of the various kinds and their uses, together with observations on the choice of the Respirator, may be had *gratis* at the City Dispensary Establishment, 93, Cheapside, corner of King-street. Established A.D. 1616.

PATENT CHRONOMETERS, WATCHES

and CLOCKS.—E. J. DENT (by special appointment, Chronometer, Watch, and Clock Maker to the Queen and H.R.H. Prince Albert) respectfully solicits an inspection of his extensive assortment of WATCHES and CLOCKS, which have been made to meet the demand of the public at the present season.—82, Strand, and 33, Cockspur-street.

WATCHES by WEBSTER & SON, Chrono-

meter Makers to the Lords of the Admiralty, established 132 years. W. & Son have removed to 74, CORNHILL, where the advantages of the premises will enable them personally to superintend their workmen. An extensive Stock, finished with the utmost care, and at the lowest possible prices consistent with maintaining their reputation supported during so many years for the finest work; consisting of COMPENSATED DUPLEX and LEVER WATCHES, on the principle of their Chronometers, to which Government awarded the prizes three years in succession. The Detached Lever and Horizontal Watches for ladies, of the smallest and most elegant patterns. Marine and Pocket Chronometers with long and accurate rates, also a large selection of second-hand Chronometers and Watches by the most eminent makers. Superior workmen are employed on the premises in the repairing department, for English and foreign work.—Webster & Son, 74, Cornhill.

WOLFF & SON'S CRETA LÆVIS, or PER-

MANENT DRAWING CHALK, in various Colours.

E. WOLFF & SON beg to apprise Artists and Amateurs that they have, by the introduction of great improvements in their CRETA LÆVIS, enabled it to be used the same as the ordinary pencil; and effects can now be produced equal to water-colour drawings, without the use of water or any other fluid, the various colours blending together with perfect harmony, beauty, and richness. It can be cut to a fine point, and is thus capable of giving a very delicate outline. For sketching from nature, the great advantages resulting from the adoption of the CRETA LÆVIS must be obvious, as without the use of water, palette, brushes, &c. all the various tints can be obtained with a truthfulness that cannot be surpassed,—thus superseding every other method in general use. The drawings may be carried in a portfolio with safety, as, unlike other crayons, they will neither rub off, nor suffer injury by coming in contact with the usual contents of a portfolio. The CRETA LÆVIS will not be affected by heat or change of climate. Specimens may be seen at the Polytechnic Institution, Regent-street; Royal Adelaide Gallery, Strand; and all respectable Stationers, where the CRETA LÆVIS may be had in sets of twelve, eighteen, twenty-four, and thirty-six, with or without boxes.

Instructions for Use.—In order to produce the delicate shades, the chalk must be cut to a fine point, and worked very lightly on the paper, blending the colours until the required tint be obtained. The deep shades merely require a broader point and increased pressure.—Bristol Board, Crayon Paper, or, in fact, any papers with a fine even surface, but not glazed, are well adapted for the CRETA LÆVIS.

WOLFF & SON beg to recommend their newly-invented SKETCHING PENCILS, or Permanent Black Chalks:—B B, very black, for foreground; H B, middle tint; N, neutral tint for distance. These Pencils are peculiarly adapted for sketching heads and landscapes, and are capable of producing a beautiful effect with very little labour. Having an adhesive quality, the drawings may be transmitted without fear of injury.

The method of using the CRETA LÆVIS is taught by Mr. W. H. KEARNEY, Member of the New Water-Colour Society.

*** Wolff & Son are desirous of opening an Agency with respectable Country Booksellers and Stationers for the sale of the above.—Manufactory, 23, Church-street, Spitalfields.

E. WOLFF & SON'S newly-invented MATHE-

MATICAL PENCILS, for Mathematicians, Engineers, Architects, &c., manufactured of Extra Hard Lead, and warranted to retain a very fine Point.—E. WOLFF & SON, in introducing their Extra Hard Lead Pencils for Mathematical and Architectural purposes, beg to draw attention to the advantages resulting from their adoption in preference to the ordinary Pencils. They are made of six distinct sizes, by which means they can be fitted to all instruments, and are so constructed that each pencil may be cut in halves without waste, thus making two Pencils, each of a length the most convenient for use, and obviating the difficulties existing with respect to the ordinary pencil.—E. WOLFF & SON have also Half-round Pencils suitable for the Spring Bow Instrument, thus preventing the necessity of dividing the Pencil down the centre. They are also manufactured of extremely hard Lead, of the finest quality, which will retain a very fine point, and give a clear, even, and distinct line.

PATTERN OF SIZES.

*** May be had of most respectable Stationers, and of the Manufacturers, 23, Church-street, Spitalfields, London.

Wolff & Son are desirous of opening an Agency with respectable Country Booksellers and Stationers.

A Sample of each Size will be sent by post to any part of the Kingdom on receipt of postage stamps equal to the amount.

GLYPHOGRAPHY, or ENGRAVED

DRAWING; cheap substitute for Wood Engraving. By the use of which clever Artists, capable of getting up superior and original designs suitable for Book Illustrations, may obtain immediate and profitable employment.—Apply personally to the Patentee, at 103, Newgate-street, London, any morning before 10 o'clock.

N.B. A small Pamphlet, called GLYPHOGRAPHY, containing full directions for the use of Artists and Amateurs, may be had of the Patentee, price 1*s.* 6*d.*; or be sent post-free to any part of the Kingdom on receipt of 2*s.*, or postage stamps to that amount.

MOULD CANDLES to BURN WITHOUT

SNUFFING.—KEMPTON'S PATENT.—These candles are greatly improved, and do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 21½, Bread-street, City; and at the Manufactory, Old Bargehouse, Christchurch, Surrey.

METCALFE'S NEW PATTERN TOOTH

BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-brushes, with the durable unbleached Russian bristles, which do not soften like common hair. Flesh Brushes, of improved graduated and powerful friction. Velvet brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment,

130, B., Oxford-street, one door from Holles-street.

Caution—Beware of the words "From Metcalfe's," adopted by some houses.

ALLNUTTS' FRUIT LOZENGES, for Coughs,

Colds, Sore Throats, Hoarseness, &c., prepared solely from the BLACK CURRANT.—In the above preparation the acidity of the Black Currant alone is introduced, and that in the highest degree of concentration. The Lozenges may therefore be strongly recommended (even to persons of the most delicate constitutions), in the above complaints, as they tend to allay inflammation, and particularly to promote a free expectoration. Public speakers and singers will find them of peculiar service. They have been also remarkably useful in cases of the Influenza. The annually increasing sale for the last 30 years of this article, notwithstanding the numerous attempts to equal it, will sufficiently prove its decided superiority to all other preparations of a similar description.—Be careful to ask for "ALLNUTTS' FRUIT LOZENGES," prepared only by the Proprietors, Allnutt & Son, Queen-street, Portsea.—Sold in boxes, at 1*s.* 1½*d.* each, by all Patent Medicine Vendors in the Kingdom.

THE NURSERY.—The care of the HAIR in

Infants and Young Children is, with inexperienced Mothers and Nurses, too little regarded. No mistake can be more injurious than the supposition that neglect of this particular can continue with impunity. The seeds of strength or weakness are laid in the Nursery; and the majority of the fine flowing ringlets, or bald heads, of after years, are traceable to this early period.

OLDRIDGE'S BALM of COLUMBIA, long celebrated for its genial and invigorating qualities, in promoting and restoring the growth of the Hair, is peculiarly fitted (applied according to the printed directions) for application during the tender years of Infancy and Childhood; and no nursery, where personal advantages are held in any estimation, should be without it. Price 3*s.* 6*d.*, 6*s.*, and 11*s.* per bottle. No other prices are genuine. Ask for Oldridge's Balm, 1, Wellington-street, Strand.

SHARPE'S SOLUBLE QUININE DENTI-

FRICE. Recommended and used by the FACULTY, for preserving the TEETH to the latest possible period. The advantages of this truly scientific preparation arise from its holding, in state of quintessence, the medicinal properties of Bark and Myrrh, which, by a chemical combination, known only to the proprietor, are rendered instantly soluble in the juices of the mouth; at the same time, it is perfectly free from acid, grit, or any pernicious ingredients. By its astringent qualities it prevents decay, eradicates scurvy, and, by exciting healthy action of the gums, prevents their separation from the teeth; or, if subject to bleeding, gives, in most cases, immediate, and, by continued use, permanent relief. It is strikingly beneficial in affections of the mouth, the result of a mercurial or medicinal course; and, when subject to tenderness of the gums arising from cold, its use is a positive preventive of future attacks. The virtue of this celebrated Dentifrice in cleansing, removing incrustations, and speedily giving a beautiful whiteness to the teeth, as well as sweetness to the breath, is unrivalled by any other Tooth Powder, whilst its refreshing bitter imparts an agreeable sensation to the most discriminating palate.

Be careful to observe the Proprietor's Signature on the Government stamp.—Prepared and sold by G. Y. SHARPE, Chemist, Islington-green, London. To be procured of all respectable Medicine Venders, in boxes at 1*s.* 9*d.* and 2*s.* 9*d.* each; and through the following Agents:—Sanger, 150, Oxford-street; Butler, 4, Cheapside; Hannay & Co. 63, Oxford-street; Edwards, 67, St. Paul's Churchyard; Barclay & Sons, 95, Farringdon-street; Sutton & Co. 10, Bow Churchyard; and J. D. Best, 14, Grosvenor-street West, Eaton-square.

N.B. Orders by post immediately attended to.

The Favourite Annual.

Elegantly bound, 21s.

FISHER'S DRAWING ROOM SCRAP-BOOK.

"Wears the aspect of an old and familiar friend, and as such is always welcome. The tasteful beauty of its exterior, the number, variety, and richness of its illustrations, the general excellence of its poetic accompaniments and the true womanly heart and pure spirit which pervade the whole, render the present volume as fascinating a companion as its predecessors."—*Eclectic Review.*

"Whilst so much taste and liberality are exhibited in 'The Drawing Room Scrap-Book,' there is little hazard in predicting for it a continuance of that public patronage by which it has been upheld amidst the failure of so many similar publications."—*The Watchman.*

2.

With 16 Plates, elegantly bound, 8s.

THE JUVENILE SCRAP-BOOK.

"We earnestly hope that many parents will delight their children, at this season, by presenting them with the 'Juvenile Scrap-Book.' We greatly admire the skill with which Mrs. Ellis pleases while she instructs her young readers. The embellishments are beautiful, and the exterior splendid and tasteful."

3.

Now ready, with 33 Plates, beautifully bound, 21s.

CHINA:

ITS SCENERY, ARCHITECTURE, SOCIAL HABITS, &c.

Drawings by ALLOM.

Descriptions by the Rev. G. N. WRIGHT.

"A very amusing book—conveys instruction without wearying, and pleases without misleading the reader. The combined efforts of the artist and writer facilitate the acquirement of much that could not be conveyed by either party unassisted, and bring to every capacity of acquisition a great deal of what everybody is anxious for, and ought to know."—*Times.*

4.

In uniform Volumes, neatly bound,

THE ENGLISHWOMAN'S FAMILY LIBRARY.

"We can conscientiously aver, that no works within our knowledge are equally calculated to instruct by their cheerful, pleasant composition, and to instruct by their sagacious, honest counsels."

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 843. LONDON, SATURDAY, DECEMBER 23, 1843. PRICE FOURPENCE (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. BAUDRY, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28fr. or 1l. 2s. the year. To other Countries, the postage in addition. [JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

ART-UNION of LONDON.—4, Trafalgar-square, Charing-cross. Established 1837.

President.

His Royal Highness the Duke of CAMBRIDGE.

Vice-President.

The Most Noble the Marquis of NORTHAMPTON, P.R.S.

The Subscribers of the current year will receive for each guinea paid, besides the chance of obtaining a valuable Work of Art, an impression of a Line Engraving, by Mr. E. Goodall, from the Picture by Clarkson Stanfield, R.A., 'CASTELLO D'ISCHIA;' and, *in addition to this*, a series of Twenty-two Designs in Outline, (size, 12 inches by 8,) made expressly for the Society by Mr. H. C. Selous, and engraved by Mr. Henry Moses, illustrative of the 'Pilgrim's Progress.' Several of the Outlines are already engraved, and may be seen at the Office: an EARLY Subscription is earnestly solicited, to enable the Committee to make arrangements for their distribution immediately after the close of the lists.

A finished Proof of the Engraving due to the Subscribers of the year 1843, 'RAFFAELLE AND THE FORNARINA,' engraved by Mr. L. Stocks, after Sir A. Callcott, R.A., may be seen at the Office. GEORGE GODWIN, F.R.S. F.S.A.} Hon. Secs.
LEWIS POCOCK, F.S.A.}

December, 1843.

PRIVATE TUTOR.—A VACANCY for a PUPIL is now open in the family of a Clergyman of long experience, residing twelve miles from London, the number of whose Pupils does *not* exceed five or six: he can offer the most satisfactory references to Gentlemen whose sons have been under his care. Letters to be directed for the Rev. R. H., Post Office, Petersham, Surrey.

PUPIL in a CLERGYMAN'S FAMILY.—A Clergyman, officiating at the West End, resident in a delightful abode, a mile from Kensington-gardens, can receive, with advantages most desirable to every solicitous parent, a PUPIL, to be educated with his own son, about nine, intended for the Church. Address Rev. H. Z. Barton, M.A., care of Messrs. Wrightman & Co. 112, Edgeware-road.

THE CONTINENT.—TO PARENTS AND GUARDIANS.—A Widowed Lady, of the Established Church, who is highly connected, is about to travel with a young friend for general improvement, and to afford her the facilities for acquiring Foreign Languages in their respective countries. She will be happy to take charge of a Young Lady, of good family, requiring similar advantages. She would have the benefit of introductions to the first society, and of instructions, if desired, from eminent masters. The Lady being of highly cultivated mind and manners, this opportunity is unusually eligible. —Address, with real signature, Mrs. E. C., Tichbourne's Library, 56, Paddington-street, Marylebone, London.

PESTALOZZIAN ESTABLISHMENT for YOUNG LADIES, five miles on the Surrey side of the Bridges, conducted by a Lady, who has it in her power to give references of the highest respectability to the Parents of pupils whose education she has completed. A Parisian Lady resides in the house, which is in a very airy and healthy position. Cards of terms, which will be found moderate, are to be obtained at Mr. Dalton's, 28, Cockspur-street; Messrs. Roake & Varty, 31, Strand; Mr. Souter's, 131, Fleet-street.

Royal Institution of Great Britain,
Albemarle-street, 18th Dec. 1843.

ACTONIAN PRIZE.—The Candidates for the Actonian Prize of ONE HUNDRED GUINEAS are reminded that, according to former Advertisements, their Essays must be sent to the House of the Institution on or before Four o'clock P.M., on Saturday the 30th instant. Each Essay, with the Candidate's name in a sealed paper, to be addressed as follows:—"TO THE SECRETARY OF THE ROYAL INSTITUTION—ACTONIAN PRIZE."

Further information will be afforded by the Assistant Secretary. JOHN BARLOW, M.A., Sec. R.I.

ROYAL MANCHESTER INSTITUTION.—EXHIBITION of MODERN PAINTINGS, ENGRAVINGS, and WORKS of ART.—The ensuing EXHIBITION will take place in the Summer, and will be opened to the public on WHIT-MONDAY, May 27. Artists in London and the neighbourhood are referred to Mr. Joseph Green, of Charles-street, Middlesex Hospital; and it is requested that all works intended for exhibition may arrive at the Institution not later than Thursday, May 16.

No carriage expenses will be paid by the Institution, except on works from those artists to whom the exhibition circular has previously been forwarded.

T. W. WINSTANLEY, Hon. Sec.

SCHOOL OF METHOD.

Under the Sanction of the Committee of Council on Education.

APOLLONICON ROOMS, 101, St. Martin's-lane.

SINGING on the METHOD of WILHEM, under the Direction of Mr. JOHN HULLAH.

CLASS No. 30, FOR GENTLEMEN,

Will commence on FRIDAY, January 19th, 1844, at a Quarter past Six o'clock.

Terms—30*s.* for the Course of Fifty Lessons, of one hour and a quarter each, or 6*s.* per month (Eight Lessons); but Schoolmasters, Sunday-School Teachers, &c., will be admitted, on payment of 15*s.* for the Course, or 3*s.* per month.

CLASS No. 31, FOR LADIES,

Will commence on FRIDAY, January 26th, at a Quarter before Five o'clock.

Terms—Same as Class No. 30.

Each Pupil must be provided with the Manual, price 5*s.*, published by Mr. Parker, 445, West Strand.

Tickets and full particulars may be obtained at the Office, 101, St. Martin's-lane.

FRESCO AND ENCAUSTIC ORNAMENTAL PAINTING.

MR. FREDERICK SANG, Artist, from the Royal Academy at Munich, begs to inform the Nobility and Gentry (Architects particularly), that he continues, with a considerable number of his Pupils, to decorate Public and Private Buildings in the above manner, and in the different ancient and modern styles, on reasonable terms, and with the greatest dispatch. Orders executed in all parts of the United Kingdom. —Apply by letter to Mr. Frk. Sang, 27, Portland-terrace, Regent's-park, London.

TERMS FOR THE PERUSAL OF NEW PUBLICATIONS. Now ready, gratis, and post free.

THE TERMS of SUBSCRIPTION to the BRITISH and FOREIGN LIBRARY, Conduit-street, Hanover-square.—Families in Town or Country are supplied with all the New and Standard Works for perusal in any quantity. The NEW CATALOGUE is just published, comprising (besides a large collection of French and Italian Works) the most esteemed productions in the following branches of English Literature:—

History,	Belles Letters,	Voyages and Travels,
Biography,	Moral Philosophy,	Fiction, Poetry,
Divinity,	Political Philosophy.	The Drama.

Apply to Saunders & Otley, Publishers, Conduit-street.

CHEAP MODERN PUBLICATIONS, being the duplicates (in every department of Literature) of Andrews' Circulating Library, 167, New Bond-street. The Catalogue is now ready for delivery, gratis. It is printed on a large sheet of paper, and sent postage free. These books are withdrawn from the Library to make room for the multiplicity of new publications, which are supplied in unlimited numbers to the Subscribers to this Library.—Terms of Subscription, &c., to be had on application, or forwarded to any part of the country. —N.B. Persons desirous of establishing Book Clubs or Circulating Libraries will find the above worthy their attention.—ANDREWS' LIBRARY, 167, New Bond-street, adjoining the Clarendon Hotel.

To be published December 30,

DANIELL'S

The United Service Journal, from its commencement to the end of the present year (1843) complete in 44 vols. 8vo. handsomely half bound, calf gilt, new binding, only 10*l.* 10*s.*

John Miller, 404, Oxford-street.

HORNE & CO.'S PUBLIC SUBSCRIPTION LIBRARY, No. 105, CHEAPSIDE, London, consisting of a Collection of upwards of 50,000 Volumes of Works, by the best Authors, in the various departments of Literature.

Terms of Subscription.—Subscribers of 5*l.* 5*s.* per annum; 3*l.* 3*s.* the half year; or 1*l.* 1*s.* the quarter, are entitled to 16 vols. at a time, in Town, or 24 vols. in the Country.—4*l.* 4*s.* per annum; 2*l.* 10*s.* the half year; or 1*l.* 8*s.* the quarter, 12 vols. in Town, 16 in the Country.—3*l.* 3*s.* per annum; 1*l.* 16*s.* the half year; or 1*l.* 1*s.* the quarter, 8 vols. in Town, 12 in the Country.—2*l.* 2*s.* per annum; 1*l.* 6*s.* the half year; or 15*s.* the quarter, 4 vols. in Town, 6 in the Country.—The New Publications are added to the Library as they issue from the press; from which Subscribers may select one-half their complements.

BOOK SOCIETIES, or Families desirous of entering into a joint subscription, can be supplied with any number of books, entirely new, and of their own selection, whether in the Library Catalogue or not, upon the following terms:—If 30 volumes be required constantly in circulation among the members, 12*l.* 12*s.* per annum. And if a greater or less number be required, the same rate in proportion. The Books to be exchanged at the time and in the way best suited to the convenience of the members; the Society paying carriage to and from London.

*** Subscriptions to be paid in advance.

TO AUTHORS and READERS.—A novel and interesting plan for enabling Authors to introduce their Unpublished Works to the Public and the Publishers, will appear in the January number of THE CRITIC of Literature, Art, and Science, published on the 1st of every month, at 49, Essex-street, price 8*d.* only.

NEWSPAPER OFFICE, No. 15, COVENTRY-STREET, LONDON, established upwards of Thirty Years. —T. JOHN WARD, 79, Bishopsgate-street Within.

ELEGANT CHRISTMAS PRESENTS.—MECHI'S ENVELOPE CASES, 4, Leadenhall-street, London. An entirely new stock in wood, leather, and papier maché, quite unique, and different from any yet produced. They form an appropriate accompaniment to his splendid new varieties of portfolios, netting boxes, ladies' companions, work boxes, writing desks, card cases and boxes, pole screens, hand screens, card racks, tea caddies, cabinets, jewel cases, tables, vases, note and cake baskets, inkstands, and an infinite variety of other articles, presenting a tout ensemble of elegancies in papier maché unrivalled in this kingdom. The largest assortment of tea trays painted after Landseer, and with birds, flowers, figures, and landscapes. A show room expressly for papier maché articles and bagatelle tables. Catalogues gratis.

SILVER SUPERSEDED, and those corrosive and injurious Metals, called Nickel and German Silver, supplanted by the introduction of a new and perfectly matchless ALBATA PLATE.

C. WATSON, 41 and 42, BARBICAN, and 16, NORTON FOLGATE, aided by a person of science in the amalgamation of Metals, has succeeded in bringing to public notice the most beautiful article ever yet offered; possessing all the richness of Silver in appearance, with all its durability and hardness—with its perfect sweetness in use—undergoing, as it does, a Chemical Process, by which all that is nauseous in mixed metals is entirely extracted—resisting all Acids, may be cleaned as Silver, and is manufactured into every article for the Table and Sideboard.

	Plain.		Threaded.		King's.	
	16*s.*	6*d.*	30*s.*	0*d.*	35*s.*	0*d.*
Table Spoons and Forks	12	6	25	0	30	0
Dessert ditto	5	6	13	6	13	6
Tea Spoons	6	0	12	6	12	6
Salt ditto	5	6 each	12	6	12	6
Fish Knives	3	6 pair	7	6	7	6
Sauce Ladles	3	6 each	7	6	7	6
Gravy Spoons						

C. Watson begs the Public will understand, that this Metal is peculiarly his own, and that Silver is not more different from gold than his metal is from all others; on its intrinsic merit alone he wishes it to be tested, and, from the daily increasing eulogiums he receives, he is convinced that nothing can prevent its becoming an article of universal wear. C. Watson's handsomely ILLUSTRATED CATALOGUE and PRICE CURRENT is published, and Families who regard economy and elegance should possess themselves of this useful Book, which may be had *Gratis* and Post Free from the above Address.

THREE PAPIER MACHE TEA TRAYS, 35*s.*; a set of three Gothic Shape ditto (including the largest size), for 25*s.*; three Gothic-shaped Japanned ditto, 25*s.*; three Sandwich-shape ditto, 15*s.*; and every article in Furnishing Hardware unusually low. Quality is here the primary consideration; hence their uninterrupted success for 50 years, and their present celebrity as the best and most extensive Furnishing Warehouses in London.

TABLE KNIVES, ivory handles, warranted, 11*s.* per doz.; Desserts, 9*s.*; Carvers, 4*s.* per pair; a most extensive stock to select from, with balance handles, at 55*s.*, 60*s.*, and 70*s.*, the long set of 50 pieces; white bone and other handles, 8*s.* to 15*s.* the 24 pieces; stag-handled carvers, 3*s.* 6*d.* per pair. The establishments of C. Watson have ranked pre-eminent for 50 years for their superior Table Cutlery, the whole of which is marked with his name and address, and subject to exchange if not approved of.

SOLAR AND CANDLE LAMPS.—A Solar Lamp, to burn common oil without smoke or smell, 22*s.* 6*d.*; a Palmer's Patent Candle Lamp, to give the light of two mould candles, with glass shade, 9*s.*; Hot Water Dishes for Venison, Beefsteak, or Stews —a set of six London-made, Patent Dish Covers, 18*s.* 6*d.*; Bronze and other Fenders, from 7*s.* to 28*s.*; Fire Irons, 3*s.* 6*d.*; Coal Scuttles, Tea Kettles, and every article in furnishing Hardware unusually low.

PART I. OF

THE WOMEN OF ENGLAND;

THEIR SOCIAL DUTIES, &c.

By MRS. ELLIS.

"We know no work better calculated to exercise a powerful, lasting, and beneficial influence. If we could have our own way, every family should order a copy. Husbands, especially young husbands, should buy it for their wives—fathers, for their daughters—brothers, for their sisters."—*Methodist Magazine.*

2.

RE-ISSUE IN MONTHLY DIVISIONS.

On the 1st of January will be published, containing Twelve Quarto Plates, and Thirty-two pages of Letter-press, the First Division, price 6s. of

CHINA:

ITS SCENERY, ARCHITECTURE, SOCIAL HABITS, &c.

The Drawings by THOMAS ALLOM, Esq.

Historical and Descriptive Notices by the Rev. G. N. WRIGHT, M.A.

The Work may also be had in Parts, 2s. each; and Volumes, elegantly bound, One Guinea each.

Vol. I., now ready, containing Eight Parts.

The Times.—"A very amusing book—conveys instruction without wearying, and pleases without misleading the reader. The combined efforts of the artist and writer facilitate the acquirement of much that could not be conveyed by either party unassisted, and bring to every capacity of acquisition a great deal of what everybody is anxious for, and ought to know."

Tait's Magazine.—"A highly-embellished and beautiful work; and, after prudent consideration, we will say, that if we had but a guinea to lay out on illustrated books, our purchase should be this same China. It contains much accurate information about the most numerous and singular human community under the canopy of heaven."

FISHER, SON & Co. Newgate-street and Angel-street, London.

New Christmas Book by Mr. Dickens.

This day is Published, in small 8vo, Price Five Shillings,

With Four Coloured Etchings and Woodcuts by Leech,

A CHRISTMAS CAROL.

IN PROSE.

BEING

A GHOST STORY OF CHRISTMAS.

By CHARLES DICKENS.

LONDON: CHAPMAN AND HALL, 186, STRAND.

"THE FAVOURITE ANNUAL OF THE SEASON."

In large 8vo. price 12*s.* elegantly bound,

FRIENDSHIP'S OFFERING

For 1844.

This long-established Annual now makes its appearance in a new form and a new dress, the size being greatly enlarged, and the list of Steel Engravings increased both in beauty and number, with the farther addition of appropriate Wood-engravings, and other Embellishments. The volume, thus changed in everything *but the price*, and the genius and distinction of the Contributors, is justly styled "*the best and cheapest Annual of the season.*"

"We are much pleased with this Annual; it is every way improved."—*Times*, Nov. 20.

London: SMITH, ELDER & Co. 65, Cornhill.

Now ready, the FOURTH and LAST PART of the

HON. E. EDEN'S PRINCES AND PEOPLE OF INDIA.

Price 21*s.*; coloured, 2*l.* 12*s.* 6*d.*

*** This Work is now complete, and contains Portraits of most of the characters that have figured in the late disturbances in India, and is considered a standard and national work.

DICKINSON & SON, 114, New Bond-street.

PUNCH'S ALMANACK!

MR. PUNCH will have the pleasure of laying before his Friends, on the 30th Inst.,

HIS ALMANACK FOR THE NEW YEAR,

wherein the events of each Month will be graphically illustrated in PUNCH's most approved fashion.

The whole of the Jokes—several hundreds—are reared by the same hands as those which obtain every week the silver and copper medals from the public, who are always the best judges of a good thing, but of whose discrimination it is not for MR. PUNCH to speak. The Cuts, which are of a kind to invite the public to come again (and again), are by Messrs. LEECH, MEADOWS, HAMERTON, &c.

Published at the OFFICE, 196, STRAND. Price 3*d.*; and Stamped, to go by post, 4*d.*

SUPERB CHRISTMAS PRESENT.

Dedicated, by permission, to Prince Albert.

Just completed, in one magnificent volume, imperial quarto,

ITALY;

HISTORICAL, CLASSICAL, AND PICTURESQUE.

IN A SERIES OF SIXTY VIEWS,

Engraved in the highest style of the Art, from Drawings made and selected expressly for this Work; and with full, descriptive letter-press.

By WILLIAM BROCKEDON, Esq. F.R.S.

With Contributions from the pencils of Stanfield, R.A., Roberts, R.A., Harding, Prout, Leitch, Barnard, &c.

Prints, half morocco, gilt tops, full gilt back.. 5*l.* 10*s.* | Proofs, morocco extra, gilt edges .... 8*l.* 18*s.* 6*d.*

"An undertaking that combines the recommendation of cheap price with superior excellence."—*Spectator.*
"A work of equal interest and beauty."—*Athenæum.*
"A superb publication."—*Globe.*
"This is a splendid work."—*Asiatic Journal.*
"The public will at last have a descriptive picture of Italy, within a reasonable compass, yet on a sufficiently extensive plan, which will do credit to the illustrated literature of the country."—*Times.*

London: DUNCAN & MALCOLM, Paternoster-row; and BLACKIE & SON, Glasgow and Edinburgh.

DURING JANUARY,

MR. VAN VOORST WILL PUBLISH

THE FOLLOWING

NEW WORKS.

PROFESSOR ANSTED'S GEOLOGY,

Introductory, Descriptive, and Practical. Part I. price 5*s.* *On January 31st.*

3.

PROFESSOR OWEN'S

HISTORY OF BRITISH FOSSIL MAMMALIA.

Part I. price 2*s.* 6*d.*—*On January 31st.*

4.

MESSRS. TULK & HENFREY'S

ANATOMICAL MANIPULATION.

Fcap. 8vo.

5.

DOMESTIC SCENES IN GREENLAND AND ICELAND.

16mo. price 2*s.* 6*d.*

Part I. price 8*s.* of a New Edition of

MR. NEWMAN'S

HISTORY OF BRITISH FERNS,

On January 31st.

RECENTLY PUBLISHED,

A HISTORY of BRITISH FOREST TREES. By PRIDEAUX JOHN SELBY, of Twizell, Esq. 1 vol. 8vo. with nearly 200 Engravings, price 28*s.*; large paper, 36*s.*

"The best work on Forest Trees is Selby's."
Lindley's *Gardener's Chronicle.*

MR. YARRELL'S HISTORY of BRITISH BIRDS. 3 vols. 8vo. containing 520 Illustrations, price 4*l.* 10*s.*; royal 8vo. 9*l.*; imp. 8vo. 12*l.* 10*s.*

"Most cordially do we congratulate Mr. Yarrell on the termination of his laborious undertaking. The five volumes he has produced, containing descriptions and figures of every known British species of fish and bird, are in every sense of the word, national works."—*Athenæum.*

COLOURED ILLUSTRATIONS of the EGGS of BRITISH BIRDS, accompanied with descriptions of the Eggs, Nests, &c. By WILLIAM C. HEWITSON. Six Parts, published at 2*s.* 6*d.* each. About 33 will complete the Work; Monthly.

"His work, in consequence, not only contains numerous eggs which had never been previously figured, but is particularly rich in original and graphic accounts of the birds themselves, and of the peculiar habits by which they are distinguished. In a pictorial point of view, its merits, we should imagine, almost defy competition."—*Edinburgh Review*, No. 156, April, 1843, p. 472.

MULREADY'S VICAR of WAKEFIELD. —The Vicar of Wakefield, with Thirty-two Illustrations by W. Mulready, R.A., engraved by John Thompson. Square 8vo. 21*s.*: or morocco, 36*s.*

"The work is superior to any modern work."—*Athenæum.*

"There are some designs in the volume in which art may justly boast of having added something to even the exquisite fancy of a Goldsmith."—*Examiner.*

ILLUSTRATIONS OF BAPTISMAL FONTS. Parts 1, 2, 3, at 2*s.* 6*d.* each.

"We feel very high gratification in introducing this delightful series to the notice of our readers. Each number contains sixteen highly-finished woodcuts, accompanied by a few descriptive remarks, which are written with judgment and discrimination. The Illustrations of Fonts will be completed in eight parts; and Churchyard, Highway, and Commemorative Crosses, will form the subject of a second series. To the well-merited praise of admirable selection, good taste, elegance, and fidelity, we may add a recommendation which not even Camdenians can afford to neglect, namely, that the cost of this elegant work is extremely reasonable."—*Ecclesiologist*, No. 28, Nov.

JOHN VAN VOORST, 1, Paternoster-row.

CONTAINING TWENTY-FOUR PAGES OF SEVENTY-TWO COLUMNS,

Extensively Illustrated,

PRICE ONE SHILLING,

THE ART-UNION,

MONTHLY JOURNAL OF THE FINE ARTS,

PUBLISHED ON THE FIRST OF EACH MONTH.

Established in January, 1839.

THE commencement of a New Volume—THE SIXTH—of this Monthly Journal of the Fine Arts affords a desirable opportunity for the Accession of NEW SUBSCRIBERS.

It was published to supply a desideratum in British Periodical Literature. Since its establishment, early in the year 1839, the Fine Arts have been rapidly extending their influence; the Nation has been at length aroused to consider British Art worthy of fosterage.

The efforts of the Conductors of the ART-UNION have been commensurate with the increased demand for information concerning the Arts. It has obtained the confidence of the Artists generally, secured a considerable portion of public patronage, and been recommended universally by the press, as "ably and impartially conducted," as "admirably calculated to advance the objects of artists, and increase the growing taste for Works of Art," and as "at once establishing, by the excellence of its arrangements, the variety and interest of its intelligence, and the tone of its opinions, the highest claim upon the support of all lovers of Art."

The subjects usually introduced in each Number, are—ORIGINAL ESSAYS, contributed by Artists of matured knowledge and experience. CORRESPONDENCE: being communications to the Editor upon all topics connected with Art; suggestions of improvements, experiments, comments upon discoveries, &c. SOCIETIES in CONNEXION with ART—Reports of their Proceedings. EXHIBITIONS of Metropolitan and Provincial Societies for promoting the Arts. OBITUARY: Memoirs of Artists, and Patrons of the Arts, recently deceased. ART in the PROVINCES: Notices of Exhibitions in the various Cities and Towns of Great Britain. FOREIGN ART: Intelligence from the several Continental States. VARIETIES: Memoranda upon all topics of interest and utility to the Artist, the Connoisseur, and the Amateur. REVIEWS of New Publications, Engravings, Illustrated Works, &c.

In future Numbers, considerable prominence will be given to the relations which subsist, and ought to be drawn more closely, between the Fine Arts and the Arts DECORATIVE and ORNAMENTAL. And arrangements have been made for the introduction of several important improvements. It is intended hereafter to publish the ART-UNION on fine paper, "hot-pressed," and printed partly "by hand," so as to give due effect to the Wood-engravings, of which each Monthly Part will contain several, illustrative of original articles, or borrowed from illustrated works, published in England, Germany, and France; with each Part also will be issued a Print—either procured from a current publication, or descriptive of some public work in progress. In the number for January will be published two of the very famous Wood-engravings to the 'NIEBELUNGEN LIED,' and one of the prints from the "Oriental Sketches" of Sir David Wilkie, with a variety of other engraved subjects.

The Work is especially recommended to FAMILIES, in which the Arts are studied as sources of rational and intellectual enjoyment. To the STUDENT IN DRAWING it will be at all times a most desirable aid; and to SCHOOLS a very valuable auxiliary.

To all, therefore, who are interested in Art—either as a profession or an intellectual luxury—the ART-UNION cannot fail to be an acquisition. Its leading Conductor, although his connexion with Art has been long and intimate, is not an Artist. His aim is to be at once just and generous—to divest criticism of confusing and cumbrous technicalities—to avoid prejudice and partizanship as the most dangerous of all evils—to maintain and prove the pre-eminence of British Art; and by the exertion of continual energy and industry, to advance a profession which receives, and is worthy to receive, the highest veneration; in short, *to supply to Artists, Amateurs, and Connoisseurs, accurate and useful information upon all subjects in which they are interested, and to the public the means of justly ascertaining and estimating the progress of Art, both at home and abroad.*

Published by J. How, at the ART-UNION OFFICE, 132, Fleet-street;

From whom it may be ordered direct, or through any Bookseller in the United Kingdom.

5. THOS. MOORE'S POETICAL WORKS; Containing the Author's recent Introductions and Notes. Complete in one volume, uniform with Lord Byron's Poems. Medium 8vo. 2 Plates, 21s.; bound in morocco, 42s.

Also,

An Edition in 10 vols. fcap. 8vo. Portrait and 19 Plates, 50s.; morocco, 4l. 10s.

Lalla Rookh. 21st edit. fcap. 8vo. 4 Plates, by Westall, 10s. 6d.; morocco, 14s.

Lalla Rookh. 20th edit. medium 8vo. 13 Plates, 21s.; morocco, 35s.

Irish Melodies. 15th edit. fcap. 8vo. 10s.; morocco, 13s. 6d.

6. A PICTORIAL TOUR in the MEDITERRANEAN. By J. H. ALLAN. Imp. 4to. with more than 40 Plates, and 70 Wood Engravings, 63s.

7. THE LAURRINGTONS; or, Superior People. By FRANCES TROLLOPE, Author of 'Widow Barnaby,' &c. 3 vols. post 8vo. 31s. 6d.

"In this amusing novel Mrs. Trollope revels in the province, peculiarly her own, of humorous satire, trespassing on the verge of caricature, but never pushed beyond the bounds of probability. Its pages will afford the reader frequent and hearty laughter."—*Herald*.

8. THE LIFE and ADVENTURES of JACK of the MILL, commonly called "Lord Othmill." By WILLIAM HOWITT, Author of "The Boy's Country Book," &c. 2 vols. fcap. 8vo. with numerous Illustrations on Wood, 15s. [*Nearly ready.*

9. THE CHILD'S PICTURE and VERSE BOOK. A Translation of "Otto Speckter's Fable Book." By MARY HOWITT. Printed in English, French, and German, on corresponding pages, and illustrated with One Hundred Engravings on Wood. Square 12mo. 10s. 6d. [*Nearly ready.*

10. DIARY; with STRIFE AND PEACE. By FREDERICA BREMER. Translated by MARY HOWITT. 2 vols. post 8vo. [*Immediately.*

Also,

The President's Daughters. 3 vols. 31s. 6d.

The Neighbours. 3rd edit. 2 vols. 18s.

The Home. 2nd edit. 2 vols. 21s.

11. MURRAY'S ENCYCLOPÆDIA of GEOGRAPHY. New edition, with Supplement, brought down to December 1843. 8vo. 82 Maps, and upwards of 1,000 Woodcuts, 3l.

*** The New Supplement, consisting of one sheet, and comprising a variety of recent and important information, *separately*, 1s.

12. M'CULLOCH'S GEOGRAPHICAL DICTIONARY. 2 vols. 8vo. 6 large important Maps, 4l.

Also,

M'Culloch's Commercial Dictionary. 8vo. Maps and Plans, 50s.

13. PROFESSOR BRANDE'S DICTIONARY of LITERATURE, SCIENCE, and ART. 8vo. Woodcuts, 3l.

14. GWILT'S ENCYCLOPÆDIA of ARCHITECTURE, Historical, Theoretical, and Practical. 8vo. 1,000 Woodcuts, 2l. 12s. 6d.

15. THE LONDON DISPENSATORY, containing Translations of the Pharmacopœias, &c. &c. By ANTHONY TODD THOMSON, M.D. F.L.S. 10th edition, corrected. 8vo. Woodcuts, 21s.

Also,

Elements of Materia Medica and Therapeutics. 3rd edition, 8vo. Woodcuts, 31s. 6d.

Conspectus of the Pharmacopœias, 18mo. 5s. 6d.

The Domestic Management of the Sick-room. Post 8vo. 10s. 6d.

London: Longman, Brown, Green, and Longmans.

Contents:

I. On the Chorus of the Eumenides. By Thomas Dyer.
II. A Memoir illustrative of the Geography of the Anabasis of Xenophon. By W. Francis Ainsworth. Part II.
III. Excursions from Rome in June, 1843. By F. Buxton Whalley.
IV. On the Rhythmical Declamation of the Ancients. By Professor John S. Blackie.
V. D. Junii Juvenalis Satiræ, cum Commentariis C. F. Heinrichii. 2 vols. Bonn, 1839. By Professor G. Long.
VI. Niebuhr and the Westminster Review. By Dr. W. Smith.
VII. On the Meaning of "Civilization." By G. C. Lewis, A.M.
VIII. Miscellanies. IX. Notices of Recent Publications.
X. List of Recent Publications.

THE MORNING AND EVENING SERVICES OF THE CHURCH, IN TWO VOLUMES.

THE MORNING SERVICE for the

Sundays and other Holidays throughout the Year; arranged from the *Book of Common Prayer*, and Administration of the Sacraments, and other Rites and Ceremonies of the Church, according to the use of the United Church of England and Ireland; together with the Psalter, or Psalms of David, pointed as they are to be sung or said in Churches. In One Volume.

THE EVENING SERVICE for the

Sundays and other Holidays throughout the Year. In a Second Volume.

In these Editions, separate volumes are devoted to the Morning and Evening Services respectively. The order of the *Book of Common Prayer* is strictly observed, with the addition of the First and Second Lessons for every Sunday and Holiday throughout the year, printed at full in their appointed order. By this means the Morning [and the Evening] Service, in a complete and continuous form, is wholly comprised in one volume.

These Editions of the Services are printed in two sizes, either of which may be had, bound or in boards, at the following rates:—

	FOOLSCAP OCTAVO. £ s. d.	ROYAL THIRTY-TWOS. £ s. d.

REVIEWS

Introductory Lectures on Modern History. By Thomas Arnold, D.D., Regius Professor of Modern History in the University of Oxford, and Head Master of Rugby School. 2nd edit. Fellowes.

History of Rome. By the Same. 3 vols.

We rejoice at the opportunity of uniting in one review both these excellent works, and on that account regret less the late notice of the earlier publication. We have now before us the Theory and Practice of Historical Composition, by the same author—and that author the late Dr. Thomas Arnold, of Rugby. The death of this eminent scholar was a great loss to the highest class of literature (see *Athen.* No. 765). His judgment and taste were regulated by the purest principles; while the bent of his own mind disposed him to demand and recognize the progress of improvement in himself and in his friends, as also most prerogatively in the institutions of society. As his charity was universal, he hoped all things for the race; and the knowledge which he had gained of the past, only induced him to contemplate with increased serenity the future. Thus, he held, with Dr. Southey, that we are warranted by history in affirming that, on the large scale, the condition of humanity has improved, continues to improve, and evermore tends to a state of perfection, of which the most ideal anticipations are the truest. This view of the world demands a certain temperament, and is, perhaps, more dependent on its impulses than the results of logical process, or experimental effort. Be this as it may, it bespeaks an amiable and a generous heart, susceptible of the noblest impressions, and beating in the bosom of one who, while living, must be generally beloved, and when dead, sincerely lamented.

By the course of his studies, as well as by the idiosyncracy of his genius, Dr. Arnold was strongly inclined to seek for the Law which lies at the base of all history; nay, he was convinced that he had found it, and mentions among his greatest troubles his experience that other minds were not as fully satisfied on the point as his own. He wished, therefore, to give a Scientific character to history, that the investigator may be no longer "turned adrift, as it were, on a wide sea, to navigate it as he best can, and take his own soundings, and make his own surveys." Using the word "political" in its most elevated meaning—as expressing the highest πολιτικη of the Greeks—Dr. Arnold identified in one category the laws of political science and those of history. Both, "to his mind," were "absolutely certain;" hence, as he adds, "the lessons of any particular portion of history, supposing that the facts are known to us, appear to be certain also; and daily experience can scarcely remove my wonder at finding they do not appear so to others."

Notwithstanding, however, his firm faith in a fundamental principle of history, and of certain laws of historical science as the developements of that principle, Dr. Arnold was, in other respects, disposed to admit the validity of doubt in the course of historical investigation. At a time, therefore, when most of the learned were startled at the apparent scepticism of Niebuhr, Dr. Arnold sympathised with the German historian; and, even so early as the year 1824, applied to the Rev. J. C. Hare for information touching that writer's labours and merits. His influence ever after, on the whole frame of his thoughts, was of the most powerful kind; and he defended his character and authority with both zeal and discretion:—

"Nothing (he writes in his own history of Rome) is more unjust than the vague charge sometimes brought against Niebuhr, that he has denied the validity of all the early history of Rome. On the contrary, he has rescued from the dominion of scepticism much which less profound inquirers had before too hastily given up to it: he has restored and established far more than he has overthrown. Ferguson finds no sure ground to rest on till he comes to the second Punic War. In his view, not only the period of the kings and the first years of the commonwealth, but the whole of two additional centuries—not only the wars with the Equians and the Volscians, but those with the Gauls, the Samnites, and even with Pyrrhus, are involved in considerable uncertainty. The progress of the constitution he is content to trace in the merest outline; particular events, and still more particular characters, appear to him to belong to poetry or romance, rather than to history. Whereas, Niebuhr maintains, that a true history of Rome, with many details of dates, places, events, and characters, may be recovered, from the beginning of the commonwealth. It has been greatly corrupted and disguised by ignorant and uncritical writers; but there exist, he thinks, sufficient materials to enable us, not only to get rid of these corruptions, but to restore that genuine and original edifice which they have so long overgrown and hidden from our view. And accordingly, far from passing over hastily, like Ferguson, the period from the expulsion of Tarquinius to the first Punic War, he has devoted to it something more than two large volumes; and from much that to former writers seemed a hopeless chaos, he has drawn a living picture of events and institutions—as rich in its colouring, as perfect in its composition, as it is faithful to the truth of nature. Were I, indeed, to venture to criticise the work of this great man, I should be inclined to charge him with having overvalued, rather than undervalued, the possible certainty of the early history of the Roman commonwealth. He may seem, in some instances, rather to lean too confidently on the authority of the ancient writers, than to reject it too indiscriminately. But let no man judge him hastily, till, by long experience in similar researches, he has learnt to estimate sufficiently the instinctive power of discerning truth, which even ordinary minds acquire by constant practice. In Niebuhr, practice, combined with the natural acuteness of his mind, brought this power to a perfection which has never been surpassed. It is not caprice, but a most sure instinct, which has led him to seize on some particular passage of a careless and ill-informed writer, and to perceive in it the marks of most important truth, while, on other occasions, he has set aside the statements of this same writer, with no deference to his authority whatever. To say that his instinct is not absolutely infallible, is only to say that he was a man; but he who follows him most carefully, and thinks over the subjects of his researches most deeply, will find the feeling of respect for his judgment continually increasing, and will be more unwilling to believe what Niebuhr doubted, or to doubt what he believed."

Dr. Arnold had a right so to judge of Niebuhr, because he had gone over again the same ground. But, in ordinary cases, this dependence on the mere instinct of a writer is open to obvious difficulties. His own estimate of the qualifications of an historian was very high. Opposed in this and other respects to Dr. Johnson, his reverence for the historian's character and work was unfeignedly profound. History, to Dr. Arnold, was like the interior of St. Peter's at Rome, or the appearance of mountains; at first sight unsatisfactory, but, on acquaintance, convicting the beholder of incapacity to appreciate their greatness. What he saw, was not all that existed; but all that his untaught glance could master. In like manner, says Dr. Arnold, "history must be content to share in the common portion of everything great and good: it must be undervalued by a hasty observer." It bears, according to him, the same relation to society that biography does to an individual. It must find in its persons a common purpose, the accomplishment of which is the object of their common life, though perhaps unconsciously; to show the developement of this purpose is the proper subject of history, both in its external and its internal life.

In both these aspects, Dr. Arnold has contemplated the majestic history of the Roman State. Commencing in obscurity and fable, this mighty theme gradually acquires clearness and importance, as we trace it from the spring-head into the wide and deep river. Dr. Arnold has thrown the early legends and stories into an antiquated style, in order to mark them so as not to be mistaken, by even the most careless reader, for history. In this manner he tells us how Æneas went over sea from Troy to the land of the Latins: how Romulus and Remus were born, and suckled by a she-wolf, and fed by a woodpecker; how Numa Pompilius was chosen king; how Tullius Hostilius warred with the Albans; how the Horatii and the Curiatii fought; and how Horatius slew his sister; and of the good reign of Ancus Martius; with all other particulars relating to that heroic time. The stories, also, of L. Tarquinius Priscus, and the famous Augur, Attus Navius; of Servius Tullius; of Lucius Tarquinius the Tyrant, and the Sibyl; of Lucretia, and Lucius Junius Brutus, and his judgment on his two sons; with the worthy deed of Horatius Cocles, at the wooden bridge, nigh the hill Janiculum; and the bold deed of Caius Mucius, who burned his own hand in the fire, to prove his courage to King Porsenna; and also the great spirit of the maiden Cloelia; together with the wars between the Romans and Latins, on account of Tarquinius; and of the great battle by the Lake Regillus, so distinguished by the divine interposition of Castor and Pollux: these stories are banished, in a greater or less degree, to the mist-land of fiction. The stories of Coriolanus and Cincinnatus, as also the slaughter of the Fabii at the River Cremera, are, in like manner, declared to be, in great part, of a legendary character. With these poetical dubieties, vanishes, we fear, the entire popular history of Pagan Rome: as well, to the general mind, no history of Rome, as these to be no narratives of matter-of-fact! But, doubtless, fancy must yield to criticism. Yet, perhaps, if we find less of fact in these same soul-stirring arguments, we may, on strict investigation, discover, even on that account, all the more of truth. At the lowest estimation, they are parables, in which is veiled the very spirit of the Roman nationality; whence it became what it ultimately was, "great, glorious, and free," and a permanent example for the guidance and admonition of politicians and statesmen in all after-ages.

Spurius Cassius, we are told, was the first really historical character; and, by a singular compensation of fortune, remains purely so; no poet having sung his deeds, and the early annalists having branded his memory with charges of treason and attempted tyranny. Herein, however, they only repeated the language of the party who had destroyed him. To him, nevertheless, Rome owed her future greatness. It was he who, in his second consulship, concluded the league with the Latins; and in his third, that with the Hernicans. Also, at the price of his own life, he procured the enactment of the first agrarian law. The true character of this law was first explained by Niebuhr. The territory of the State being, in the first instance, divided equally amongst the citizens, every citizen was of course a landholder; yet, from the impossibility of cultivating all, a large part remained uninclosed, and was kept mostly as pasture. From this a revenue was raised, to which every citizen who turned out sheep or cattle upon it contributed: strangers, also, though incapable of buying land, might yet rent therein

Digitized by Google

a right of pasture for their flocks and herds. But as to new territory gained in war, individuals were allowed to occupy lands, and to enjoy all the benefits of them, on paying to the State the tithe of the produce; which done, they might even alienate the land which they occupied either for a term of years or for ever. The public land thus occupied was also made the means of admitting new candidates for citizenship. But there were difficulties in the way of this: a redivision of such land, and the ejectment of many tenants, was necessary. A sacrifice of existing interests was implied; and such a measure was, in the eyes of the old citizens, revolutionary.

About twenty-four years after the expulsion of Tarquinius, such an agrarian law became expedient. It was, accordingly, proposed by Spurius Cassius; but the aristocracy (the old landholders, or citizens,) resisted him, and were headed by his colleague, Proculus Virginius. The measure was carried; but when the year of Cassius's consulship was over, care was taken by the burghers, assembled in their curiæ, that he should be accused and condemned. "He," says Dr. Arnold, "shared the fate of Agis, and of Marino Falieri: he was sentenced to die as a traitor, and was, according to the usage of the Roman law, scourged and beheaded, and his house razed to the ground."

The quotation of this brief sentence suggests to us a point of criticism which has frequently struck us in reading these volumes. It is our purpose to avoid in this instance, as much as possible pressing critical considerations, owing to the posthumous character of the publications under review; we rather seek to indicate their peculiar merit, and to show the serious student where his reading may be profitably bestowed. But the point of criticism we now wish to press, involves a question of taste worthy of consideration by the future historian. The reader will have already perceived that, in the sentence quoted, an attempt is made to illustrate an incident of ancient history, by reference to one in modern. This, besides reversing the usual process, produces an effect upon the mind which is at first, we must confess, unpleasant. Dr. Arnold, however, adopted the practice, to bring the subject home to the business and bosom of the living reader; nor do we mean to deny that for the living reader it is justifiable on the score of much utility. We cannot help feeling, however, that it offends some principle of harmony which strongly resents the violation: and that if in Herodotus or Thucydides, in Pliny, Cicero, Livy, or Dionysius, names of places and persons, ancient and modern, foreign and domestic, were blended together in one sentence as we frequently find them in Dr. Arnold's 'History of Rome,' the best scholars would be liable to great mistakes, and incur even inextricable perplexities. It is only because the reader knows that it is a modern Englishman writing of ancient Rome, and illustrating it by more recent and even contemporary experiences, that he is preserved from the error of confounding times and events;—nor would this knowledge save him, if he were not also acquainted from other sources with the date and *locale* of the illustrative matter. We mention this, that Dr. Arnold's example may not be taken as an authority for a licence which may be egregiously abused. For himself, the end perhaps justified the means, inasmuch as he declares in his preface the object he had in view—that of doing justice to his theme up to the extent of our present knowledge; since we who are now in the vigour of life possess, in his opinion, at least one advantage which our children may not share equally:—

"We have lived," he says, and how truly!—"in a period rich in historical recollections beyond all former example; we have witnessed one of the great seasons of movement in the life of mankind, in which the arts of peace and war, political parties and principles, philosophy and religion, in all their manifold forms and influences, have been developed with extraordinary force and freedom. Our own experience has thus thrown a bright light upon the remoter past; much which our fathers could not fully understand, from being accustomed only to quieter times, and which again, from the same causes, may become obscure to our children, is to us perfectly familiar. This is an advantage common to all the present generation in every part of Europe; but it is not claiming too much to say, that the growth of the commonwealth, the true character of its parties, the cause and tendency of its revolutions, and the spirit of its people, and its laws, ought to be understood by none so well as by those who have grown under the laws, who have been engaged in the parties, who are themselves citizens of our kingly commonwealth of England!"

Such is Dr. Arnold's apology for the liberty which he has undoubtedly taken with the severe style which seems to be the due of history. We confess, however, that in the History of Rome as treated by him, we see again in a rude and rudimental form the eternal contest between the aristocratic and democratic elements of society, and have besides its issue predicated. The original condition of a people soon ceases to be suited to their altered circumstances. What begins in inequality tends to equality. Preservation, where improvement is required, leads to injustice. It is folly, says Dr. Arnold, to think that men's institutions can be perpetual when every thing else in the world is continually changeable. When the conquered Latins, he adds, were first brought to Rome by those who were then the only Roman citizens, when they were allowed to retain their personal liberty, to enjoy landed property, and to become so far a part of the Roman people, it was not required that they should at once pass from the condition of foreigners to that of perfect citizens; the condition of Commons was a fit state of transition from the one rank to the other:—

"But after years had passed away, and both they and their original conquerors were in fact become one people above all, when this truth had been already practically acknowledged by the constitution of Servius Tullius; to continue the old distinctions was but provoking a renewal of the old hostility: if the burghers and the commons were still to be like two nations, the one sovereign and the other subject, the commons must retain the natural right of asserting their independence on the first opportunity, of wholly dissolving their connexion with those who refused to carry it out to its full completion. That their desire was for complete union, rather than for independence, arose over and above all other particular causes, from that innate fondness for remaining as we are, which nothing but the most intolerable misery can wholly eradicate."

Our space will not permit us to enter into the full particulars of this contest, and no power of condensation could bring into the limits of a few columns either the facts of, or the influences from the mighty subject before us. Roman greatness was not purchased at less expense than both foreign and internal contention. The sufferings of the Roman Commons after the well-known retreat of the Gauls, for instance, was of the most fearful description. If we know little of this period, it was because it lay in the very deepest darkness of misery—for long periods of general suffering make far less impression on our minds, than the short sharp struggle in which a few distinguished individuals perish. It was a period of quiet legalized oppression—that most deadly of all evils, says Arnold, "when law, and when religion herself, are false to their divine origin and purpose, and their voice is no longer the voice of God, but of his enemy."—The actual distress endured by the Romans in the loss of their houses, and the destruction of their cattle and fruit-trees, few of which could have escaped the hands of the Gauls during their long occupation of the city and territory of Rome, although secure for the time, would nevertheless have been diminished by the sense of its being the common portion, and would in time have been altogether relieved. But the attacks of foreign enemies rendered the Tributum, as a war-tax, constant and heavy—other taxes and burthens also bore on the means of the less wealthy with an unseasonable pressure. Debts were thus unavoidably contracted—the rate of interest on borrowed money became excessive; the law against insolvent debtors was ruinously severe. Accordingly every patrician house soon became a private gaol; but a gaol, in which the prisoners were kept to hard labour for the gaoler's benefit, or were at his caprice loaded with irons and subjected to the lash. Add to this, that the debts incurred by the prisoner were for no fault of his own, but were the consequence of an overwhelming national calamity, and of the want of consideration shown by the government for their state of distress. In all this the causal elements of a coming revolution are apparent enough. At length the "Man of the People" appeared in the person of Marcus Manlius. One day this heroic man saw a centurion who had served with him, and whom he knew to be a distinguished soldier, now dragged through the forum on his way to his creditor's workhouse. He hastened up, protested against the indignity, and himself paid the debt on the spot, and redeemed the debtor. The gratitude and the popularity which this act gained for him, excited him to proceed in the same course; he sold by public auction the most valuable part of his landed property, and declared that he would never see a fellow citizen made a bondman for debt so long as he had the means of relieving him. In this manner, he discharged no less than four hundred debtors! Hereby he justly won the name—"Father of the Commons!" His reward was imprisonment—suspicion—and the death of a traitor. Dr. Arnold concedes that his motives were not pure. Alas! Nevertheless, his work perished not. L. Sextius and C. Licinius adopted it, and, using more constitutional and calmer means, succeeded. The thence called Licinian laws embodied as much of good government and equitable legislation as the times were ripe for. The Commons were admitted to the consulship. From this point the greatness of Rome begins to unfold itself. Hitherto she has had no historian, poet, orator, nor philosopher. Henceforth, there is hope of all. But first she must be trained to perfection in the military virtues. For this (domestic struggles being ended,) are appointed the Samnite and the Latin wars; the details of which are graphically given in several chapters of Dr. Arnold's second volume.

The great merit of Dr. Arnold, as an historian, consists in his strong instinct for obtaining, by whatever means, the liveliest possible notion of the people, time, and place, that form his theme, and graphically describing them with such peculiarities, and such adjuncts of sunlight and shadow, as could be procured by consulting documents or by instituting analogies. He proceeded very much after the fashion of the dramatist, and selected from all sources whatever was needful to make up his stage-picture and moving panorama. Modern history was his principal source of illustration, and he read the past with the spectacles of the present. He made little account of antiquarianism. Only so far as we see and understand the present, we see and can understand the past. How, he demands, can he comprehend the parties of other days, who has no clear notion of those of his own? He who feels his own times keenly, will write a lively and impressive account of past times.

Digitized by Google

On philological acquirements he placed great value, but greater, perhaps, on geographical knowledge. Archdeacon Julius C. Hare, in editing the third volume of the History of Rome, remarks at length on Dr. Arnold's able qualifications in this kind,—asserting, moreover, that our author is "the first who has given anything like an adequate representation of the wonderful genius and noble character of Hannibal." As what the historian says of this hero will serve to exhibit his style in some of its best phases, we shall extract it:—

"Hannibal's genius may be likened to the Homeric god, who, in his hatred of the Trojans, rises from the deep to rally the fainting Greeks, and to lead them against the enemy, so the calm courage with which Hector met his more than human adversary in his country's cause, is no unworthy image of the unyielding magnanimity displayed by the aristocracy of Rome. As Hannibal utterly eclipses Carthage, so, on the contrary, Fabius, Marcellus, Claudius Nero, even Scipio himself, are as nothing when compared to the spirit and wisdom and power of Rome. The senate, which voted its thanks to its political enemy, Varro, after his disastrous defeat, because he had not despaired of the commonwealth, and which threatened either to solicit, or to reprove, or to threaten, or in any way to notice the twelve colonies which had refused their accustomed supplies of men for the army, is far more to be honoured than the conqueror of Zama. This we should the more carefully bear in mind, because our tendency is to admire individual greatness far more than national; and as no single Roman will bear comparison with Hannibal, we are apt to murmur at the event of the contest, and to think that the victory was awarded to the least worthy of the combatants. On the contrary, never was the wisdom of God's providence more manifest than in the issue of the struggle between Rome and Carthage. It was clearly for the good of mankind that Hannibal should be conquered; his triumph would have stopped the progress of the world. For great men can only act permanently by forming great nations; and no one man, even though it were Hannibal himself, can in one generation effect such a work. But where the nation has been merely enkindled for a while by a great man's spirit, the light passes away with him who communicated it; and the nation, when he is gone, is like a dead body, to which magic power had for a moment given an unnatural life; when the charm has ceased, the body is cold and stiff as before. He who grieves over the battle of Zama, should carry on his thoughts to a period thirty years later, when Hannibal must, in the course of nature, have been dead, and consider how the isolated Phœnician city of Carthage was fitted to receive and to consolidate the civilization of Greece, or by its laws and institutions to bind together barbarians of every race and language into an organized empire, and prepare them for becoming, when that empire was dissolved, the free members of the commonwealth of Christian Europe."

This is the perfection of a prose style,—easy, animated, and transparent; but the passage has a still higher merit—it indicates the presence of the true statesman's mind in the writer. We recognize the man of large views and far-reaching purposes. All the more have we reason to regret, that death stepped in before the completion of his mighty theme. To him Rome was a sign, and he would have shown us what it signified. He was pledged to this. The mystery yet perplexes the nations. As it is, he stops short—far short even of the production of "the Cæsar," in the gradual developement which, in his mind, was growing harmoniously with that of his immortal argument.

> Ere she grew to empire,
> Rome was a savage den of robbers, where
> Each strove for mastery, and each rose up
> To hinder other than himself from ruling;
> Till the collision,—rude as it might be,—
> Struck out *the Cæsar*, like a glorious light,
> The extract of their virtue, and its crown.

This marvellous result it was not given to him to trace; neither its immediate causes, nor its consequences. We have so far lost what instruction could be given to us by a man truly wise—instruction which we had anticipated with eager hope and much pleasure. Perhaps, however, enough has been done for the present. Materials are, in fact, yet wanting for a perfect history of Rome:—some are even now in process of discovery. It would have been well if Dr. Arnold could have waited for these. He felt that, without them, his own production was so defective, that another and better history would be necessary. To this we must now look forward. When the documents are producible, the competent historian will be found.

A Christmas Carol; in Prose; being a Ghost Story of Christmas. By Charles Dickens. Chapman & Hall.

A tale to make the reader laugh and cry—open his hands, and open his heart to charity even towards the uncharitable, —wrought up with a thousand minute and tender touches of the true "Boz" workmanship—is, indeed,

> —— a dainty dish to set before a King.

Smellfungus himself would be puzzled how to *cut up* this jovial, genial piece of Christmas fare otherwise than lovingly. We shall only pretend to give the hungry, happy reader a slice, by way of staying his appetite till the entire treat smokes with a rich savour on his own table.

The idea of this Ghost-Carol, is simple enough; but we shall leave it to Mr. Dickens to develope the mystery, and content ourselves with a picture or two. The first, a Christmas morning-piece, will make holiday mouths water:—

"The house fronts looked black enough, and the windows blacker, contrasting with the smooth white sheet of snow upon the roofs, and with the dirtier snow upon the ground; which last deposit had been ploughed up in deep furrows by the heavy wheels of carts and waggons; furrows that crossed and re-crossed each other hundreds of times where the great streets branched off, and made intricate channels, hard to trace, in the thick yellow mud and icy water. The sky was gloomy, and the shortest streets were choked up with a dingy mist, half thawed half frozen, whose heavier particles descended in a shower of sooty atoms, as if all the chimneys in Great Britain had, by one consent, caught fire, and were blazing away to their dear hearts' content. There was nothing very cheerful in the climate or the town, and yet was there an air of cheerfulness abroad, that the clearest summer air and brightest summer sun might have endeavoured to diffuse in vain. For the people who were shovelling away on the house-tops were jovial and full of glee; calling out to one another from the parapets, and now and then exchanging a facetious snowball—better-natured missile far than many a wordy jest—laughing heartily if it went right, and not less heartily if it went wrong. The poulterers' shops were still half open, and the fruiterers' were radiant in their glory. There were great, round, pot-bellied baskets of chesnuts, shaped like the waistcoats of jolly old gentlemen, lolling at the doors, and tumbling out into the street in their apoplectic opulence. There were ruddy, brown-faced, broad-girthed Spanish Onions, shining in the fatness of their growth like Spanish Friars; and winking from their shelves in wanton slyness at the girls as they went by, and glanced demurely at the hung-up misletoe. There were pears and apples, clustered high in blooming pyramids; there were bunches of grapes, made, in the shopkeeper's benevolence, to dangle from conspicuous hooks, that people's mouths might water gratis as they passed; there were piles of filberts, mossy and brown, recalling, in their fragrance, ancient walks among the woods, and pleasant shufflings ankle deep through withered leaves; there were Norfolk Biffins, squab and swarthy, setting off the yellow of the oranges and lemons, and in the great compactness of their juicy persons, urgently entreating and beseeching to be carried home in paper bags and eaten after dinner. The very gold and silver fish, set forth among these choice fruits in a bowl, though members of a dull and stagnant-blooded race, appeared to know that there was something going on; and, to a fish, went gasping round and round their little world in slow and passionless excitement. The Grocers'! oh, the Grocers'; nearly closed, with perhaps two shutters down, or one; but through those gaps such glimpses! It was not alone that the scales descending on the counter made a merry sound, or that the twine and roller parted company so briskly, or that the canisters were rattled up and down like juggling tricks, or even that the blended scents of tea and coffee were so grateful to the nose, or even that the raisins were so plentiful and rare, the almonds so extremely white, the sticks of cinnamon so long and so straight, the other spices so delicious, the candied fruits so caked and spotted with molten sugar as to make the coldest lookers-on feel faint and subsequently bilious. Nor was it that the figs were moist and pulpy, or that the French plums blushed in modest tartness from their highly decorated boxes, or that everything was good to eat and in its Christmas dress: but the customers were all so hurried and so eager in the hopeful promise of the day, that they tumbled up against each other at the door, clashing their wicker baskets wildly, and left their purchases upon the counter, and came running back to fetch them, and committed hundreds of the like mistakes in the best humour possible; while the Grocer and his people were so frank and fresh that the polished hearts with which they fastened their aprons behind might have been their own, worn outside for general inspection, and for Christmas daws to peck at if they chose."

After this glorious panorama, we must have a cabinet picture. The dinner which follows is laid in the house of a poor clerk. The mother and resident daughter have been too anxiously employed all the morning to stir abroad; another daughter has just come home for her holiday; and the father, come home from church, has laid by his worsted comforter with its long fringe, resolved to have one merry day:—

"'Why, where's our Martha?' cried Bob Cratchit looking round. 'Not coming,' said Mrs. Cratchit. 'Not coming!' said Bob, with a sudden declension in his high spirits; for he had been Tim's blood-horse all the way from church, and had come home rampant. 'Not coming upon Christmas Day!' Martha didn't like to see him disappointed, if it were only in joke; so she came out prematurely from behind the closet door, and ran into his arms, while the two young Cratchits hustled Tiny Tim, and bore him off into the wash-house, that he might hear the pudding singing in the copper. 'And how did little Tim behave?' asked Mrs. Cratchit, when she had rallied Bob on his credulity and Bob had hugged his daughter to his heart's content. 'As good as gold,' said Bob, 'and better. Somehow he gets thoughtful sitting by himself so much, and thinks the strangest things you ever heard. He told me, coming home, that he hoped the people saw him in the church, because he was a cripple, and it might be pleasant to them to remember upon Christmas Day, who made lame beggars walk and blind men see.' Bob's voice was tremulous when he told them this, and trembled more when he said that Tiny Tim was growing strong and hearty. His active little crutch was heard upon the floor, and back came Tiny Tim before another word was spoken, escorted by his brother and sister to his stool beside the fire; and while Bob, turning up his cuffs—as if, poor fellow, they were capable of being made more shabby—compounded some hot mixture in a jug with gin and lemons, and stirred it round and round and put it on the hob to simmer; master Peter and the two ubiquitous young Cratchits went to fetch the goose, with which they soon returned in high procession. Such a bustle ensued that you might have thought a goose the rarest of all birds; a feathered phenomenon, to which a black swan was a matter of course: and in truth it was something very like it in that house. Mrs. Cratchit made the gravy (ready beforehand in a little saucepan) hissing hot; Master Peter mashed the potatoes with incredible vigour; Miss Belinda sweetened up the apple-sauce; Martha dusted the hot plates; Bob took Tiny Tim beside him in a tiny corner at the table; the two young Cratchits set chairs for everybody, not forgetting themselves, and mounting guard upon their posts, crammed spoons into their mouths, lest they should shriek for goose before their turn came to be helped. At last the dishes were set on, and grace was said. It was succeeded by a breathless pause, as Mrs. Cratchit, looking slowly all along the carving-knife, prepared to plunge it in the breast; but when she did, and when

Digitized by Google

the long-expected gush of stuffing issued forth, one murmur of delight arose all round the board, and even Tiny Tim, excited by the two young Cratchits, beat on the table with the handle of his knife, and feebly cried Hurrah! There never was such a goose. Bob said he didn't believe there ever was such a goose cooked. Its tenderness and flavour, size and cheapness, were the themes of universal admiration. Eked out by the apple-sauce and mashed potatoes, it was a sufficient dinner for the whole family; indeed, as Mrs. Cratchit said with great delight (surveying one small atom of a bone upon a dish), they hadn't ate it all at last! Yet every one had had enough, and the youngest Cratchits in particular, were steeped in sage and onion to the eyebrows! But now, the plates being changed by Miss Belinda, Mrs. Cratchit left the room alone—too nervous to bear witnesses—to take the pudding up, and bring it in. Suppose it should not be done enough! Suppose it should break in turning out! Suppose somebody should have got over the wall of the back-yard, and stolen it, while they were merry with the goose! a supposition at which the two young Cratchits became livid! All sorts of horrors were supposed. Hallo! A great deal of steam! The pudding was out of the copper. A smell like a washing-day! That was the cloth. A smell like an eating-house, and a pastry-cook's next door to each other, with a laundress's next door to that! That was the pudding. In half a minute Mrs. Cratchit entered: flushed, but smiling proudly: with the pudding, like a speckled cannon-ball, so hard and firm, blazing in half of half-a-quartern of ignited brandy, and bedight with Christmas holly stuck into the top. Oh, a wonderful pudding! Bob Cratchit said, and calmly too, that he regarded it as the greatest success achieved by Mrs. Cratchit since their marriage. Mrs. Cratchit said that now the weight was off her mind, she would confess she had her doubts about the quantity of flour. Everybody had something to say about it, but nobody said or thought it was at all a small pudding for a large family. It would have been flat heresy to do so. Any Cratchit would have blushed to hint at such a thing. At last the dinner was all done, the cloth was cleared, the hearth swept, and the fire made up. The compound in the jug being tasted and considered perfect, apples and oranges were put upon the table, and a shovel-full of chesnuts on the fire. Then all the Cratchit family drew round the hearth, in what Bob Cratchit called a circle, meaning half a one; and at Bob Cratchit's elbow stood the family display of glass; two tumblers, and a custard-cup without a handle. These held the hot stuff from the jug, however, as well as golden goblets would have done; and Bob served it out with beaming looks, while the chesnuts on the fire sputtered and crackled noisily. Then Bob proposed: 'A Merry Christmas to us all, my dears. God bless us!' Which all the family re-echoed. 'God bless us every one!' said Tiny Tim, the last of all. He sat very close to his father's side, upon his little stool. Bob held his withered little hand in his, as if he loved the child, and wished to keep him by his side, and dreaded that he might be taken from him."

We can positively make room for nothing more after such a noble meal. How the sight thereof, and of similar scenes, with sundry ghastly contrasts, works upon the close heart of the miser, Scrooge, and what becomes of Tiny Tim, is most capitally *carolled* in prose by Mr. Dickens; and will call out, we hope, a chorus of "Amens," in the shape of kindly sympathies and bounteous deeds, from the Land's End to John o'Groat's House.

Contributions to the Edinburgh Review. By Francis Jeffrey.

[Second Notice.]

The publication of the Correspondence between Mrs. M'Lehose, (all that was wanting, we believe, to complete the works of the Scotch lyrist,) has led us to turn to Mr. Jeffrey's critique upon the edition of Burns by Mr. Cromek, which appeared in 1808. The following remarks upon his prose composition coincide entirely with the opinion we have ourselves expressed:—

"The prose works of Burns consist almost entirely of his letters. They bear, as well as his poetry, the seal and the impress of his genius; but they contain much more bad taste, and are written with far more apparent labour. His poetry was almost all written primarily from feeling, and only secondarily from ambition. His letters seem to have been nearly all composed as exercises, and for display. There are few of them written with simplicity or plainness; and though natural enough as to the sentiment, they are generally very strained and elaborate in the expression. A very great proportion of them, too, relate neither to facts nor feelings peculiarly connected with the author or his correspondent—but are made up of general declamation, moral reflections, and vague discussions—all evidently composed for the sake of effect, and frequently introduced with long complaints of having nothing to say, and of the necessity and difficulty of letter-writing."

The reviewer seems to have hit with precision the worst feature of Burns's moral character, and the censure it draws down is not more severe than just:—

"But the leading vice in Burns's character, and the cardinal deformity, indeed, of all his productions, was his contempt, or affectation of contempt, for prudence, decency, and regularity; and his admiration of thoughtlessness, oddity, and vehement sensibility;—his belief, in short, in *the dispensing power* of genius and social feeling, in all matters of morality and common sense. This is the very slang of the worst German plays, and the lowest of our town-made novels; nor can anything be more lamentable, than that it should have found a patron in such a man as Burns, and communicated to many of his productions a character of immorality, at once contemptible and hateful. It is but too true, that men of the highest genius have frequently been hurried by their passions into a violation of prudence and duty; and there is something generous, at least, in the apology which their admirers may make for them, on the score of their keener feelings and habitual want of reflection. But this apology, which is quite unsatisfactory in the mouth of another, becomes an insult and an absurdity whenever it proceeds from their own. A man may say of his friend, that he is a noble-hearted fellow—too generous to be just, and with too much spirit to be always prudent and regular. But he cannot be allowed to say even this of himself; and still less to represent himself as a hare-brained sentimental soul, constantly carried away by fine fancies and visions of love and philanthropy, and born to confound and despise the cold-blooded sons of prudence and sobriety. This apology, indeed, evidently destroys itself: for it shows that conduct to be the result of deliberate system, which it affects at the same time to justify as the fruit of mere thoughtlessness and casual impulse."

There is much of the vice here reprobated in the letters of Sylvander. Mr. Jeffrey adds:—

"This pitiful cant of careless feeling and eccentric genius, accordingly, has never found much favour in the eyes of English sense and morality. The most signal effect which it ever produced, was on the muddy brains of some German youth, who are said to have left college in a body to rob on the highway! because Schiller had represented the captain of a gang as so very noble a creature.—But in this country, we believe, a predilection for that honourable profession must have preceded this admiration of the character. The style we have been speaking of, accordingly, is now the heroics only of the hulks and the house of correction; and has no chance, we suppose, of being greatly admired, except in the farewell speech of a young gentleman preparing for Botany Bay. It is humiliating to think how deeply Burns has fallen into this debasing error. He is perpetually making a parade of his thoughtlessness, inflammability, and imprudence, and talking with much complacency and exultation of the offence he has occasioned to the sober and correct part of mankind."

This was written in 1809. The writer has lived to see a daring and systematic attempt to establish a school of literature upon the principles of Burns, pushed to the most profligate extreme. We were actually in some danger, for a season, of having the "heroics of the hulks and the house of correction" established in the room of Milton and Shakspeare. Jack Sheppard threatened to supplant Coriolanus and Hamlet, and the heroes and heroines of Millbank Penitentiary bid fair to cast the Romeos and Rosalinds into the shade. A deliberate effort was made to invest not only rapine but murder with the charms of romantic virtue, and to hold up to ridicule and contempt, and even as proper objects of spoil and outrage, "the sober and correct part of mankind," meaning thereby all who had no fancy to connect themselves with gangs of thieves—no taste for picking pockets, or no divine impulse to cut a throat in Hyde Park or Kensington Gardens, for the sake of a watch and some loose silver.

The criticism, also, of the following remarks is so just, that we extract them with pleasure:

"Akin to this most lamentable trait of vulgarity, and indeed in some measure arising out of it, is that perpetual boast of his own independence, which is obtruded upon the readers of Burns in almost every page of his writings. The sentiment itself is noble, and it is often finely expressed;—but a gentleman would only have expressed it when he was insulted or provoked; and would never have made it a spontaneous theme to those friends in whose estimation he felt that his honour stood clear. It is mixed up, too, in Burns with too fierce a tone of defiance; and indicates rather the pride of a sturdy peasant, than the calm and natural elevation of a generous mind. The last of the symptoms of rusticity which we think it necessary to notice in the works of this extraordinary man, is that frequent mistake of mere exaggeration and violence, for force and sublimity, which has defaced so much of his prose composition, and given an air of heaviness and labour to a good deal of his serious poetry. The truth is, that his *forte* was in humour and in pathos—or rather in tenderness of feeling; and that he has very seldom succeeded, either where mere wit and sprightliness, or where great energy and weight of sentiment were requisite. He had evidently a very false and crude notion of what constituted *strength* of writing; and instead of that simple and brief directness which stamps the character of vigour upon every syllable, has generally had recourse to a mere accumulation of hyperbolical expressions, which *encumber the diction* instead of exalting it, and *show the determination* to be impressive, without the power of executing it. This error also we are inclined to ascribe entirely to the defects of his education. The value of simplicity in the expression of passion, is a lesson, we believe, of nature and of genius;—but its importance in mere grave and impressive writing, is one of the latest discoveries of rhetorical experience."

No national partiality appears to have influenced Mr. Jeffrey in his judgment upon either the character or the poetry of Burns. We need scarcely say that he commends with rapture the peculiar beauties of the latter, and the general opinion coincides with his, that "the best pieces are written in Scotch." The reviewer's observations on the *language* of Burns are important:—

"We beg leave too, in passing, to observe, that this Scotch is not to be considered as a provincial dialect—the vehicle only of rustic vulgarity and rude local humour. It is the language of a whole country—long an independent kingdom, and still separated in laws, character, and manners. It is by no means peculiar to the vulgar; but is the common speech of the whole nation in early life—and, with many of its most exalted and accomplished individuals, throughout their whole existence; and, though it be true that, in later times, it has been, in some measure, laid aside by the more ambitious and aspiring of the present generation, it is still recollected, even by them, as the familiar language of their childhood, and of those who were the earliest objects of their love and veneration."

In the articles on Cowper, and on the several works of Crabbe, there is much earnest and eloquent discussion on the sources of poetry. We shall quote one or two positions which appear at first sight to be of unquestionable truth, but which, nevertheless, it is not very easy to reconcile with the phenomena of our own literature:—

Digitized by Google

"In point of fact, we are all touched more deeply, as well as more frequently, in real life, with the sufferings of peasants than of princes; and sympathise much oftener, and more heartily, with the successes of the poor, than of the rich and distinguished."

Again:—

"It appears to us to be certain, that where subjects, taken from humble life, can be made sufficiently interesting to overcome the distaste and the prejudices with which the usages of polished society too generally lead us to regard them, the interest which they excite will commonly be more profound and more lasting than any that can be raised upon loftier themes; and the poet of the Village and the Borough be oftener, and longer read, than the poet of the Court or the Camp. The most popular passages of Shakespeare and Cowper, we think, are of this description: and there is much, both in the volume before us, and in Mr. Crabbe's former publications, to which we might now venture to refer, as proofs of the same doctrine. When such representations have once made an impression on the imagination, they are remembered daily, and for ever. We can neither look around, nor within us, without being reminded of their truth and their importance; and, while the more brilliant effusions of romantic fancy are recalled only at long intervals, and in rare situations, we feel that we cannot walk a step from our own doors, nor cast a glance back on our departed years, without being indebted to the poet of vulgar life for some striking image or touching reflection, of which the occasions were always before us, but—till he taught us how to improve them—were almost always allowed to escape."

We are tempted to offer a few observations upon the theory here propounded, for we more than doubt its correctness. The name of Shakspeare might have made the reviewer pause. *Is* Shakspeare the "poet of vulgar life," in the sense that Crabbe is? Are "the most popular passages of Shakspeare" of the same description as the poetry of "the Village and the Borough"? Which are the most popular passages of Shakspeare? Which the most popular of his plays? We should say Hamlet, Julius Cæsar, Macbeth, Othello, Romeo and Juliet, King Lear, and a few of the historical dramas. If Shakspeare is still the most popular poet in the English language, from what sources chiefly has *he* extracted poetic interest? Certainly much oftener from the "sufferings of princes" than of "peasants." Indeed, it is remarkable that no tragedy or affecting play of Shakspeare is founded upon a tale of domestic life, even in the middle classes of society. Where there are not kings and queens, there are at least dukes and countesses. The only purely middle-class play is the Merry Wives of Windsor, the poetry of which seems as distinct from that of "the Borough," as one thing can be from another. It is true that Crabbe has elicited poetry from the details of rural and municipal life, but it is equally true that the acknowledged chief of poets has preferred the developement of human feelings and passions in the characters of monarchs, generals, warriors, magistrates, cardinals, bishops, princesses, dukes, and earls. The dramatists cotemporary with Shakspeare frequently draw their plots and characters from the circumstances of middle life; but Shakspeare never does. Desdemona is the daughter of an illustrious Venetian; Ophelia of a noble Dane; Cordelia of a king of England. Are we the less moved by their sad fortunes on account of their elevated stations? Ought Shakspeare to have made Desdemona the daughter of a linen-draper, or made the sire of his Ophelia a "fishmonger" indeed? Would Cordelia's sorrows touch us more deeply, if Lear was a greengrocer? The reviewer seems to be of this opinion, for he expressly says—"a powerful effort to interest us in the feelings of the humble and obscure will usually call forth more deep, more numerous, and more permanent emotions than can ever be excited by the fate of princesses and heroes." It is strange that no "powerful effort" of this kind has yet been made by any poet, in any language, with an effect at all to be compared with that which Shakspeare has produced by his Lear, his Coriolanus, his Juliet, or his Constance. The Greek dramatists worked upon the same principle, and moved the pity or the terror of their democratic audiences by the misfortunes and passions of heroic or of royal life, of a Philoctetes, an Orestes, an Electra, a Medea. We cannot allow that either Sophocles or Shakspeare took their subjects from these lofty regions, out of any deficiency of power to invest humbler scenes and humbler personages with tragic interest. According to the Edinburgh reviewer, "Where a subject taken from humble life can be made sufficiently interesting to overcome the distaste and the prejudices with which the usages of polished society too generally lead us to regard them, the interest which they excite will commonly be more profound and lasting than any that can be raised by loftier themes." If so, all that is wanting to overtop Shakspeare and "sweet Electra's poet," is a sufficiently high degree of art: the dramatic skill to make a hero of some Mycyllus of Athens, or convert a Mrs. Gilpin, of London, to the uses of a tragedy-queen. We have a high opinion of the powers of Crabbe in his peculiar walk; but the poets "of the Court and Camp" have not yet been surpassed by the poets of the "Village and the Borough." The truth seems to be, that we are too painfully affected by the calamities of the middle walks of life, to delight most in the poetry that reproduces them. We are lowered by the spectacle of misfortunes incident to our own class of society, while those that affect the higher strata have a pleasing tendency to exalt us. In our sympathy with a suffering king or afflicted princess, there is no more pain than we can easily endure. We are even gratified by that ideal vicinity to the high places into which we are brought by the distresses of the great. The poetry that exposes the agonies of a queen's heart, or represents the struggles of a great chieftain with his destiny, is a lively and flattering demonstration of the radical equality which subsists amongst men. Then it is also to be remembered that, by virtue of this same law of equality, the poet "of the Court and the Camp" has all the great materials of poetic interest at his command, as much as the poet who sings of Sally or of Edward Shore. The pangs of a mother reft of her children are as agonizing in a palace as in a cottage. The terrors of a conscious murderer are as appalling in a Macbeth as in a Sykes. The suicide of Ophelia is not less affecting than that of a sempstress in Oxford Street. We have, however, extended these remarks far enough for an incidental discussion.

Considering that Mr. Jeffrey thought highly enough of Cowper to place his name beside that of Shakspeare, (Lieutenant-Colonel Dalhousie beside the God of War!) his critiques on Wordsworth must be allowed to have been harsh. To this opinion he is now disposed himself, for we find the following note appended to his trenchant review of the Excursion, beginning with "This will never do!"

"I have spoken in many places rather too bitterly and confidently of the faults of Mr. Wordsworth's poetry: And forgetting that, even on my own view of them, they were but faults of taste, or venial self-partiality, have sometimes visited them, I fear, with an asperity which should be reserved for objects of Moral reprobation. If I were now to deal with the whole question of his poetical merits, though my judgment might not be substantially different, I hope I should repress the greater part of these *vivacités* of expression: And indeed so strong has been my feeling in this way, that, considering how much I have always loved many of the attributes of his Genius, and how entirely I respect his Character, it did at first occur to me whether it was quite fitting that, in my old age and his, I should include in this publication any of those critiques which may have formerly given pain or offence, to him or his admirers. But, when I reflected that the mischief, if there really ever was any, was long ago done, and that I still retain, in substance, the opinions which I should now like to have seen more gently expressed, I felt that to omit all notice of them on the present occasion, might be held to import a retractation which I am as far as possible from intending; or even be represented as a very shabby way of backing out of sentiments which should either be manfully persisted in, or openly renounced, and abandoned as untenable."

However, in the article on the Excursion, there is some admiration to qualify the general severity of the censure. But the merciless review of the White Doe of Rylstone is reprinted likewise, and the critic thinks it necessary to offer an excuse for its re-appearance. If an excuse was called for, Mr. Jeffrey's is a good one: he continues to think the White Doe "the very worst poem ever imprinted in a quarto volume," and the public pretty generally agree with him in opinion.

One of the faults of Mr. Jeffrey's style is a certain pertness of expression, which easily degenerates into vulgarity, and sometimes imparts offensiveness to his strictures. He appears occasionally to mistake flippancy for wit, and a shrewish strain of observation for a pungent one. We could illustrate from the articles on Wordsworth, amongst others; yet, in the main, Mr. Jeffrey is a solid as well as a brilliant writer: he possesses a strong sense of the ridiculous, which now and then, perhaps, transports him too far, and must irritate extremely the objects of his laughter; but it must be acknowledged that in the course of thirty years he had a prodigious mass of folly, conceit, and affectation to deal with, and that, upon the whole, he has employed his powers of critical castigation with good faith, as well as a strong arm, and has contributed his full share amongst the best writers of the day, to diffuse a genuine and healthy, instead of a spurious and morbid taste in literature.

The school of Wordsworth can hardly complain that the *Edinburgh Review* has done them a wrong, for the poetry of their chief is largely quoted, whether for praise or censure. It cannot be said that an unfair selection of passages was made by Mr. Jeffrey, in order to support a general charge of affectation and absurdity, for we have ourselves heard several of Mr. Wordsworth's idolaters pronounce some of the extracts from the Excursion, most unsparingly ridiculed by this reviewer, to be amongst the finest passages of that poem,—for example, the description of the "lamb" with a "solemn bleat"—

——"List!—I heard,
From yon huge breast of rock, *a solemn bleat!*
Sent forth as if it were the Mountain's voice!
As if the visible Mountain made the cry!
Again!"—The effect upon the soul was such
As he express'd; for, from the Mountain's heart
The solemn bleat appear'd to come! There was
No other—and the region all around
Stood silent, empty of all shape of life.
—*It was a lamb*—left somewhere to itself!"

Amongst the ethical services which Mr. Jeffrey may boast of, in connexion with his critical labours, may be mentioned his reproof of the fiery but gloomy spirit, and false philosophy of Lord Byron, which caught such fast hold, for a season, of the public mind, and exercised, while the delusion lasted, a most baneful influence upon taste and morals. After a quotation of some fierce, unnatural stanzas from the third canto of Childe Harold, and some just commentary upon them, the reviewer makes the following sound observations:—

"It will be found, we believe, accordingly, that the master spirits of their age have always escaped the unhappiness which is here supposed to be the in-

Digitized by Google

evitable lot of extraordinary talents; and that this strange tax upon genius has only been levied from those who held the secondary shares of it. Men of truly great powers of mind have generally been cheerful, social, and indulgent; while a tendency to sentimental whining, or fierce intolerance, may be ranked among the surest symptoms of little souls and inferior intellects. In the whole list of our English poets, we can only remember Shenstone and Savage—two, certainly, of the lowest—who were querulous and discontented. Cowley, indeed, used to call himself melancholy;—but he was not in earnest; and, at any rate, was full of conceits and affectations; and has nothing to make us proud of him. Shakespeare, the greatest of them all, was evidently of a free and joyous temperament;—and so was Chaucer, their common master. The same disposition appears to have predominated in Fletcher, Jonson, and their great contemporaries. The genius of Milton partook something of the austerity of the party to which he belonged, and of the controversies in which he was involved; but even when fallen on evil days and evil tongues, his spirit seems to have retained its serenity as well as its dignity; and in his private life, as well as in his poetry, the majesty of a high character is tempered with great sweetness, genial indulgences, and practical wisdom. In the succeeding age our poets were but too gay; and though we forbear to speak of living authors, we know enough of them to say with confidence, that to be miserable or to be hated is not now, any more than heretofore, the common lot of those who excel."

This is excellent, with the single exception of what is said of Cowley, that he has "nothing to make us proud of him!" Had Mr. Jeffrey forgotten the Anacreontics and the "Hymn to Light"? With all his great faults, Cowley was a man of genius, and soared now and then far above the highest flight of many a poet of a hundred times his popularity.

It is curious now to look back to the notice in the *Edinburgh Review* of the first novel of Sir Walter Scott:—

"It is wonderful what genius and adherence to nature will do, in spite of all disadvantages. Here is a thing obviously very hastily, and, in many places, somewhat unskilfully written—composed, one half of it, in a dialect unintelligible to four-fifths of the reading population of the country—relating to a period too recent to be romantic, and too far gone by to be familiar—and published, moreover, in a quarter of the island where materials and talents for novel-writing have been supposed to be equally wanting: And yet, by the mere force and truth and vivacity of its colouring, already casting the whole tribe of ordidary novels into the shade, and taking its place rather with the most popular of our modern poems, than with the rubbish of provincial romances."

This is the first paragraph of the article on Waverley: here is the last:—

"There has been much speculation, at least in this quarter of the island, about the authorship of this singular performance—and certainly it is not easy to conjecture why it is still anonymous.—Judging by internal evidence, to which alone we pretend to have access, we should not scruple to ascribe it to the highest of these authors to whom it has been assigned by the sagacious conjectures of the public;—and this at least we will venture to say, that if it be indeed the work of an author hitherto unknown, Mr. Scott would do well to look to his laurels, and to rouse himself for a sturdier competition than any he has yet had to encounter!"

Mr. Jeffrey makes the following observation, in a note prefixed to this review:—

"Though living in familiar intercourse with Sir Walter, I need scarcely say that I was not in the secret of his authorship; and in truth had no assurance of the fact, till the time of its public promulgation."

The Light Dragoon. By the Author of 'The Subaltern.' 2 vols. Colburn.

The People's Library, written *by* the People, receives copious additions. Not long ago we had an American 'Salt;' this week comes an English Light Dragoon; next week, possibly, a German Travelling Journeyman will claim hearing. The value of these appearances is not exclusively literary: their social influence ought not to be inconsiderable; and we think the publishers would do well to advert to this, and provide for its developement, by such a manner and price, that would at once place Ned Myers and George Farmer, the hero of the present narrative, and the rest of the fraternity, in forecastle, and barrack, and workshop circulation. Good could not but come of it; and we think, in the long run, profit also.

This genuine journal of a Light Dragoon, re-written by Mr. Gleig, was originally contributed to one of the periodicals. The editor seems to have smoothed the original manuscript more carefully than Mr. Cooper the rough and careless diction of the man before the mast: probably, too, in mind, manners, and education, his client had the advantage. But though the style be less characteristic, the English narrative is the more entertaining and varied. We shall only draw upon this "thrice-told tale," for a passage which will interest the readers in the class to which the tale better belongs. How much of the following portrait is the work of Mr. Gleig, how much of George Farmer, it is, of course, impossible for us to determine.

"I am induced to think that the change from home service to real campaigning is much more striking, as well as far more difficult to realize, in the case of the light horseman, than in that of the infantry soldier. The infantry soldier finds himself, it is true, deprived, when he takes the field, of his comfortable barrack-room; while his provisions, instead of being served out daily, and by measure, may fall short from time to time, or utterly disappear. Then, again, he mounts guard—not over a stout brick building, which nobody dreams of assailing—but in the open fields, where all his wits must be about him, in order to prevent an active enemy from passing his line, cutting him and his picket off, and bringing ruin on the army. In every other respect, however, his life is pretty much what it ever was. He must keep his arms and accoutrements clean, himself tidy, attend parades, perform marches, and fight battles as often as to his own leader, or to the leader of the adverse host, a battle may be desirable. But, except in the matter of fighting, he must do all this at home likewise; and if his bed be often the wet ground, and his canopy the lowering sky, why there is no help for it; he must make the most of them. The light horseman, on the contrary, has not only his own wants, but those of his charger, to attend to; and the difference to the horse in the sort of life, which on service he is required to lead, is infinitely greater than the difference to his rider—supposing both to have been reared in England. In Portugal, for example, we had Indian corn served out as forage, which our horses would not taste, and which we could not get them to taste till we tried the experiment of soaking: moreover, we had to seek their litter where we could find it, to cut for them green meat, and train them to sleep picketed and in the open air, under which not a few broke down; and to bestow upon them in general a much larger portion of our care, than we had ever been taught, in the process of home duty, to consider requisite. In like manner, it was new to us to go on picket, and to sit on horses as videttes, for two hours on a stretch. It was equally new to our horses to have their saddles and housings fastened on for twenty-four hours together, and to receive their food with the bits hanging at their chests, and everything prepared for action at a moment's notice. I do not mean to say, that where men's feelings or imaginations are interested, all this is not very delightful; on the contrary, there springs up between the rider and his horse, a companionship, to which there is no parallel in any one of the many varied connexions which human life in its progress enables us to form; and such companionship is always pleasant, whether the cord binds us to a brute, or to our fellow-man. But some imagination is requisite in order to carry us into this train of feeling; and hence you invariably find, that in the light cavalry at least, your imaginative people make the best soldiers. Moreover, as the light cavalry are always employed, wherever the nature of the country will allow, at outposts, both men and horses are forced to acquire habits of vigilance, such as to be rightly understood, must have been both witnessed and experienced. The cavalry soldier sleeps, like his charger, with one eye and one ear always open. Both must be quick to perceive the first flash of a carbine, or the first blast of the trumpet; and both must be in a condition to take their places in the ranks within a minute or two after the alarm is given. Then again, patrolling, which is an especial duty, puts the mettle both of men and horses to the test. You must move forward as if you had a hundred eyes: you must be cool and collected, and prepared for every conceivable adventure. Neither hedges nor ditches must offer insuperable obstacles to your progress, whether you be required to take ground to the front or rear; and you must be quite as ready and as willing to gallop off when to convey intelligence is your business, as to fight with carbine or sword, where you are desired to delay an enemy's progress. In a word, both the light dragoon and his horse are called upon, as soon as they take their station in the front of an army, to acquire, as if by intuition, new ideas on every subject; for, except in the formation of column or line, and the art of breaking up into order of march, and closing into squadrons again, the home drill—at least in 1809 and 1810—had not taught us much of our real duty. The light horseman, who lays himself out to become a useful member of his profession, is sure to succeed. He will first of all devote himself to his horse; and then his horse, as if grateful for the kindness shown, will do for him in return innumerable services. Thus, during a night march, when the dragoon, overcome by fatigue, drops asleep, the faithful animal will slacken his pace, or sway from side to side, in order to prevent his master from falling. In like manner, if they be passing in the dark through broken and dangerous ground, the horse will often refuse to obey either spur or rein: his superior instinct directing him to avoid the perils, into which the ignorance or over-anxiety of his master was about to hurry them. Moreover, the horse knows his master's voice: it eats out of his palm, lowers its head for the well-known caress, and licks his hand like a dog in acknowledgement. And when it comes to this, let not the light dragoon be afraid to trust his charger in everything. If they be the attacking party, his horse will carry him bravely on: if it be necessary to fly, there is no fence which he will refuse, or which, unless it actually exceed his physical powers to surmount, he will not by some means either overleap or scramble through."

Military adventures in the Peninsula, sufferings in foreign prisons, domestic occupation in the household of Count Golstein, to whom Farmer served as groom, measures protective of the property of the French from the soldiers of the allied army, scenes of Indian warfare, wound up by the memorable siege of Bhurtpore, all contribute their quota of interest to this book. We must add, that in every vicissitude, 'The Light Dragoon' displays as much good sense as good feeling; and we are glad, by the preface, to find that, for the detail of his wanderings, he has been remunerated to "his heart's content."

Ireland. By J. G. Kohl. Chapman & Hall.

Although we presented our readers with so much interesting matter from Mr. Kohl's Ireland, we were far from exhausting the mine, and the appearance of this translation gives us an excuse for a few quotations of a more general character than those to which we chiefly confined ourselves in our former notice. We commence with a remark or two on a place made famous in Ireland by its inhabitants—Edgeworthtown:—

"This is a cheerful little town, in the county of Longford, and has received its name from a family which has become famed throughout the civilized world in consequence of the writings of the amiable Maria Edgeworth. This family *came over*—most of the families that own land in Ireland are of English origin, and

Digitized by Google

will often take occasion to tell their friends and guests, when their ancestors *came over* from England, in the same way that some English families will talk of the time when their ancestors *came over* from Normandy; —well, then, the Edgeworths came over in 1583, under the reign of Queen Elizabeth. The family was at that time also possessed of land in Middlesex. In Ireland they became the owners of extensive domains and castles, and, among other places, of the village of Fairymount, a name which, in its Gallicized form of Firmont, has become celebrated throughout the world. The Abbé Edgeworth, who accompanied Louis XVI. to the scaffold, derived from this village his name of Monsieur de Firmont."

Mr. Kohl adopts his usual commendable plan of not entering into personal particulars regarding those who have hospitably entertained him; but gives us an account of the principal residents of Edgeworthtown:—

"The Edgeworths have long been resident in Ireland, that is to say, they are not absentees, but live on their estate, and look to the comfort and welfare of their tenants. There are several noble and wealthy families in the neighbourhood who do the same thing; among others the family of the Tuites, and I had, in consequence, an opportunity of seeing the wonderful effect which the presence of the owner of an estate has on the tenantry, and to how great an extent, therefore, the Irish landlords, who take no care for their dependents, are themselves responsible for the wretchedness of the country. I had not thought there could have been in Ireland such solid-looking farmers as I here beheld on the estates of the two families I have mentioned. In the course of my excursions round Edgeworthtown, I saw many farm-houses as stately as the best of their kind I had ever seen in England. The houses were as clean, and the rooms as comfortable, as I could have wished them to be. The rooms and staircases were carpeted, and wine and refreshments were offered me. On Mr. Tuite's estate I visited a number of farmers, and always found their houses tidy and orderly, with sides of bacon suspended in the pantry, bright pewter dishes ranged upon the kitchen shelves, and good furniture and beds in the family rooms, just as I should have expected to find them in the houses of the wealthier peasantry in Germany. The Tuite family, I was told, had lived on their estate for 300 years, had always been resident, and the present owner was himself a very zealous and intelligent agriculturist. It is but seldom that one sees any thing of this kind in Ireland, and for that very reason, perhaps, it excites the more interest when one does see it, for it inspires a belief that, with care and kindliness, it would be possible to elevate the peasantry of Ireland, a thing which those who might best effect the change are usually least willing to admit, attributing the whole blame to the disorderly, dirty, improvident, and intemperate habits of the people."

Mr. Kohl, of course visited the lakes: his description is rather long, but we must manage to give an abstract of it:—

"From Killarney, which lies on the low shore, one sees the mountains on the other side rising like a dark wall, and reflected in the clear lake that lies like a mirror at their feet; and the prospect was beautiful when a glimpse of it could be caught through the walls, palings, and hedges, that almost shut it out. Near the town, along the lake, runs the hippodrome, or race-course of Killarney, for even such small places as this must in Ireland have their race-course. In the villages we passed through, we again saw the little Irish boys running to school, each with his slate and book under one arm, and his sod of turf for the schoolmaster under the other. * * As we trotted through the pass, we could not avoid envying a pair of eagles which were hovering high in air over our heads, although we were very well mounted on stout, sagacious, and active little Kerry horses. Their caparison is the most wretched I ever saw, consisting of nothing more than straw plaited together. Straw is indeed much in use throughout Ireland for various purposes;—they take the pigs to market, for instance, with a wisp of straw round the leg; in other countries too, straw is sometimes twisted into the shape of a rope, but a horse with bridle and harness all of straw, is a sight to be seen nowhere but in this poorest part of the west of Ireland. Be it remembered also, this was not a mere make-shift, or the whim of an individual, but a general custom. The rocks on either side of the pass, arose to a height of at least 1,500 feet, and it was about ten miles long, and presented in its various windings many wildly picturesque points. * * The principal inhabitants of these rocks are a few herdsmen and their goats, who have constantly to dispute the ground with their enemies, the eagles and foxes. The wolf is said to have inhabited these wild regions longer than any other part of the British islands, the last Irish wolf having been shot in the year 1700, in Macgillycuddy's Reeks, whereas the last was destroyed in Scotland in 1680, and none have been seen in England since 1300, when, in the time of Edward I. many were killed in Yorkshire. Perhaps the gradual extinction of those fierce animals may serve as a standard to measure the progress of civilization in the three countries. The goats are by no means carefully tended by the herdsmen, who, indeed, seldom look after them much, except once a year, when they collect the herds, take such as are fit for the market, and set the rest at liberty again. They generally calculate that ten out of every fifty will be destroyed by the eagles and foxes, or perish in some way or other among the mountains. A little river rushes through the Gap of Dunloe over the rocks, and in the middle of the valley several small lakes, of a most remarkable appearance, are formed: namely, the water has the peculiar property of staining all the ground it flows over of a deep black colour, so that now, in the beginning of October, when the waters after an unusually dry season were very low, the black rocky hollow, on the edge of which we were riding, had exactly the appearance of a gigantic inkstand half empty. Had there been at the bottom, among the rugged masses of black rock, some smoke and flame instead of water, we might have imagined we were looking into the dark entrance to the infernal regions. The Irish have named all this part of the pass, with good reason, the 'Dark valley.'"

Our readers will remember, that Mr. Kohl has taken the field against the exclusive praise of the Vale of Avoca. Here we have him, again, dealing the same impartial justice in the case of the no less famous Lakes of Killarney:—

"The effect of the lakes of Killarney, with their banks of soft meadow land and the rich fringe of trees scattered over them, is greatly increased by their lying in the midst of this rocky wilderness. They are also sprinkled over with a number of little grassy and wooded islands, and peninsulas running out far from the main land into the bosom of the lakes, and forming a never-ending variety of straits, bays, and harbours of fairy proportions. On many of these, wealthy amateurs, delighted with the fantastic and solitary character of the place, have built ornamental cottages, and thrown picturesque bridges over inlets of the lake. The whole crescent of the lakes, from one end to the other, is not more than about nine miles long, and forms undoubtedly one of the most varied and agreeable excursions one can take. The water appears, when looked into, of a dark golden brown colour, but as clear as crystal, so that one can see to a great depth beneath it. When taken up in a glass, it shews no colour. We had a crew of six rowers to our boat, for in Ireland there are always six pair of arms used where two would suffice. In reading some of the exaggerated English descriptions of the lakes of Killarney, one might fancy them to be really something supernatural. A well-known Irish writer (Wakefield), for instance, expresses himself concerning them in the following manner: 'Nature here puts on the wildest and most terrific attire to astonish the gazing spectator, who, lost in wonder and surprise, thinks that he treads on enchanted ground; and whilst he scarcely knows to which side to direct his attention, can hardly believe that the scenes before him are not the effects of delusion, or the airy phantoms of the brain, called into momentary existence by the creative power of a fervid imagination.' This is a rare specimen of bombastic nonsense, and if all this is to be said of the lakes of Killarney, what are we to say of others that much exceed them in beauty? Nature is, indeed, almost everywhere more beautiful and attractive than any language can adequately describe; but when we do attempt the description of a country, and of the charms of a particular spot, we must speak by comparison with other places, and not forget the infinite number of lovely spots of earth to which we might do injustice by our immoderate praise of one. Besides, these vague generalities of 'enchantments' and 'delusions,' and 'airy phantoms,' and 'creative imaginations,' really describe nothing at all. The realities of stone and wood and earth, which we meet with in nature, are beautiful enough—we do not need to try and lift them into the realms of phantasmagoria, but should do much better, if we would try and give the distant reader some idea of what has excited our admiration, by a faithful representation of the individual features of the scene, often by no means an easy task. Along the upper lake lies a range of small rocky islets, all surrounded, as well as the shores, with a black stripe, about four or five feet broad, pointing out what has been the height of the water in the summer. Immediately above the black stripe, and in sharpest contrast with it, comes a streak of white, of the moss I have already mentioned in speaking of the Gap of Dunloe, and over this again another of yellow furze, which seems to flourish amazingly in these boggy grounds. Above all comes the beautiful foliage of the arbutus and the oak, the former making, indeed, one of the especial attractions of Killarney. These beautiful shrubs are nowhere so numerous and flourishing as on the lakes and islands of Killarney, and the finest specimens may be seen shooting up among the rocks. The autumn is said to be the most favourable season for viewing them, on account of the endless variety of colours then exhibited by the leaves; and as, besides the advantage of this season, I had that of fine weather, an uncommon one at Killarney, where it almost always rains, I certainly had reason to consider myself fortunate. Many of the islands are covered only with weeds and bog, and cannot for a moment be compared with the Isola Madre, Isola Bella, or others in the Italian lakes. Amongst the bold promontories of the Glenna mountain, which project in lofty and commanding forms upon the lake, is one more steep and apparently inaccessible than the rest, called the Eagles' rock, because a pair of eagles have for many years had a nest upon its summit. The people of the country, however, contrive to rob the poor birds every year of their young, and sell them to this or that nobleman, who generally pays four or five pounds for the stolen goods. In the space of two or three miles, we were told, there were known to be five eagles' nests. A regular trade is carried on in the young birds, who are sent to England. Between the 15th of June and the 1st of July, they are old enough to be brought up by the hand, and this, therefore, is the time when the robberies begin. The rocks on which the nests are built, are usually so steep and dangerous, that they can only be reached by ropes from above. The people watch for the departure of the old birds, who fly away at regular hours in search of food. The men are then let down, in baskets, to deprive the feathery parents of the objects of their tender care. It happens sometimes, however, that the business is not accomplished before the birds return, and then a desperate conflict takes place with the spoilers, who come provided for such a contingency with an old sabre or a pistol. For twenty years, our boatmen informed us, they had regularly robbed the nest on the Eagles' rock, and for twenty years the same birds had regularly returned and laid and hatched their eggs there. They are the oldest birds in the whole district, and can be distinguished by the paler colour of their feathers. Generally for a week after they had been deprived of their offspring, the bereaved parents hover screaming round the empty nest, but they never seem to grow wiser by experience, or to seek for their progeny some better asylum from the ruthless rapacity of man. The men all agreed, that whenever a tamed eagle escaped and returned to its native rocks, it was sure to be attacked and torn to pieces by the wild ones. Through a narrow channel, along which the water rushed with great rapidity, overshadowed by beautiful trees, and spanned by the half-decayed arches of an ancient bridge, we entered, after some hours rowing, the Turk Lake, landing here and there to view some fine trees or try a remarkable echo, and then passed through another narrow strait into the large lake, on one of whose grassy banks, under an old arbutus tree, we spread our noonday meal. The cold meat, the

Digitized by Google

ale, and the mountain dew were fully appreciated by me and my companion, but our six rowers, though they accepted thankfully the food, seriously and resolutely declined both the ale and the spirits, asserting that they were all temperance men. We tried to overcome their objections to the ale, as it had been very cold on the water, and we thought it would do them good, but they remained firm, said it was 'no temptation at all,' and that they would rather drink water. The officer and I really felt ashamed of our self-indulgence in the presence of these abstinent people, and consumed a much smaller quantity of the 'alcoholic drinks' than we should have done, but for the reproving example before us. My friend had witnessed many of the beneficial effects of temperance in the army, and maintained that the Irish soldiers had become much improved in their discipline, and the crimes and punishments in his regiment had diminished more than one-half, since Father Mathew's reform. In the 'old drinking time' he had had every day some trouble and vexation in the barracks, but now he could enjoy his fourteen days' furlough without being harassed by anxieties about the behaviour of his men."

We cannot part from the lakes without a glimpse of "sweet Innisfallen":—

"The most interesting of the islands of this large lake, is that which bears the name of Innisfallen. It is also the largest of all, and is overgrown with the finest old trees, which lie in scattered groups as in a park, and the wide spaces between them afford the finest pasturage for cows and sheep. Many of the trees are oaks, but the greater number are magnificent old ash trees, and I also saw here a holly tree, older and larger than any I had ever seen in my life. It was twelve feet in circumference, and had gigantic far-spreading branches, like an oak. I could not help comparing it mentally with the little, wretched, stunted hollies, that drag on a sickly existence in the Jardin des Plantes, in Paris, where every care is taken of them. One of the mighty ash trees had been torn up by the roots in a storm of the preceding winter, and had carried with it a mass of rock, twenty feet in circumference, round which its roots had entwined themselves, and which, as it lay prostrate, it still held firmly clasped. There are also the ruins of an ancient abbey, and many beautiful thickets of evergreens, on this island, which Thomas Moore has remembered in his lines:

> Sweet Innisfallen, fare thee well,
> May calm and sunshine long be thine,
> How fair thou art let others tell,
> While but to feel how fair be mine."

At Bantry we have an interesting and very clever sketch of a "Beggar's Home," so wild and picturesque, that, long as it is, we must transfer it to our pages:—

"As my friend was rather fatigued, he retired early, and I went out alone to take a walk late in the evening on the sea-shore, and soon perceived a something, I could not make out what, moving before me. As it passed a house some rays of light from a window discovered to me a strange kind of head-gear decorated with flowers, which I recollected to have been worn by a beggar woman whom I had seen in the fish-market. She was one of the mob who had closed the gates behind us, and in the wildness and eagerness of her gesticulations had suggested to me some doubts of her sanity, a suspicion somewhat confirmed by the fantastic character of her attire. She wore a yellow petticoat, the tattered remains of a large red shawl, which she trailed behind her in the dust like a train, and a man's round hat, with a broad brim decorated with a garland of artificial flowers. In her hand she carried a stout stick, by the aid of which she moved swiftly along. Altogether she reminded me of a character in one of Walter Scott's novels, as these half-insane oddly-decorated beggars always do, for she was by no means the only one of the class I had seen in Ireland. Mary Sullivan, for that was her name, was now proceeding in a very quiet orderly manner along the shore of Bantry Bay; at last I approached and bade her good evening, and she made a perfectly civil reply. It appeared that her business for the day was over, and although she still wore the costume of her part, she had left the stage, and was on the point of returning to her private abode. As she said it was situated not far from the town, on the shores of the bay, I offered to accompany her to it, for I had a wish to see the dwelling of an Irish beggar at night. We crossed some broken rocky ground, and at last, as it seemed to me, turned quite out of the beaten path, but Mary Sullivan said there was no other way, so on we went. She said if I would give her my hand she would lead me in safety to the hut, which it appeared belonged, not to her, but to her sister. These poor people generally prefer a wild looking place to live in; they seem to think they are more independent if their abodes are not very accessible, and the benefits of the great undertakings of the English in road-making, are by no means so universally acknowledged by the Irish as we might suppose. We reached at last the hut of the Sullivans, which stood on a naked rocky ground, washed by the waters of Bantry Bay, and crept in. The Irish are a very religious people, and have all kinds of pretty pious salutations always at hand. If they pass people at work in a field the regular form is 'God bless your work,' and the answer 'Save you too.' If one praises a person or even a thing, or more especially a child, one must never forget to add 'God bless it,' for praise always seems suspicious to an Irishman, and, unless accompanied by an invocation of God's blessing, it appears to him to indicate a desire either to possess it oneself or to destroy it by calling towards it the attention of fairies and bad spirits, who are always upon the look out for what is beautiful. An Irish mother would rather hear a stranger say, 'What a nasty, screaming, disagreeable brat your child is,' than 'What a charming little angel you've got there,' unless he instantly warned off the bad spirits by adding 'God bless him.' As they never forget to ask a blessing, they are also most diligent in returning thanks. 'Thanks to the great God,' is a phrase often in their mouths, and certainly I believe in their hearts also. They often utter this thanksgiving even when speaking of a misfortune, as 'I've lost my poor dear little child, thanks to the great God,' a phrase that always reminded me of the Russian '*slawa bogu*,' which generally closes every story. We crept into the hut of the Sullivans with the usual salutation of 'God save you all,' and heard the response 'God save you kindly,' from the sister of Mary Sullivan and her half-grown daughter, who were crouching over a turf fire boiling potatoes. A little boy and girl were lying on the ground in company with some pigs, and gnawing a half-raw potato which they had taken from the pot. The hut was lighted partly by the fire, and partly by a dim lamp, that hung from a rafter. The lamp was a large sea shell, filled with fish oil, in which was burning a rush wick. The father was not at home, having been for some days upon the water, helping to collect coral sand, but another strangely sounding voice came from the corner of the hovel, which had taken no part in the pious salutation. I asked who was moaning there. 'It is my eldest son, your honour,' was the reply, 'he's an idiot—thank the great God—and he often moans so the whole day long.' By the feeble glimmer of the lamp I now recognized a poor creature, who seemed to me more miserable and helpless than almost any I had ever beheld. It was a young man about twenty years of age, lying in a sort of box representing a bed, and which was indeed the best bed the hut contained. He had under him straw and rags, and a pillow for his head, but he lay sobbing and trembling all over. His mother showed me some parts of his miserable frame. His arms and legs were like those of a skeleton, and several of his fingers had grown together. As we touched him he lifted up his head, and gazed at us with a vacant look. 'He has been so from his birth your honour,' said the mother. 'For twenty years we have been obliged to feed him so without his being able to do the least thing for us.' 'And yet you love him?' said I to the poor mother, thinking perhaps that an unfortunate creature like this could hardly be attended to in the midst of such poverty. 'Love him to be sure, your honour. Is'nt he my own son, God bless him? Eh, Mavourneen, look up then,' she added, raising him carefully up, and laying his head on her arm, while she stroked his crippled hand. 'I'm the only one, sir, that understands his language. He never asks after any body but me. I give him every morning his potatoes, and, when I've got any, milk and porridge. You see he's got a better bed than any of us. Don't sob so, darling.' Mary Sullivan, the old aunt of the idiot, had, in the meantime, hung upon a peg her flower-adorned hat, and the other parts of her costume, and taken from her pocket some potatoes and a fish, which had probably been given to her. The potatoes she laid at the corner of the fire which she seemed to consider as her own, hung the fish up by a wire over it to roast, and then took out her pipe and began to smoke. She told me, in answer to my question, that she spent about a halfpenny a-day in tobacco, that is, fifteen shillings a-year, which, for a beggar, appeared to me to be no inconsiderable sum. For a halfpenny one can buy, in Ireland, a large piece of bread; and I could not help wishing that some second Father Mathew might arise, to preach total abstinence from tobacco, and induce the poor Irish women to expend what it costs them in wholesome food for themselves or their children. Tenderness and hospitality are the universal characteristics of the Irish. They have also a certain easy politeness of manner towards strangers, which, in the higher classes, somewhat resembles that of the Parisians, but is met with just as often in the huts of the poorest beggars. In many countries, the stranger who enters the hut of a poor family, is stared at in dumb astonishment by the inmates till they become familiar with him. Not so in Ireland. Dirty and ragged as they are, they offer what they have without embarrassment to the most fashionably-dressed visitor, and although they never forget their respectful address, 'your honour,' yet they always appear to consider him what he really is—their guest and equal. When I parted from the Sullivans, I was accompanied to the door by many a warm 'God speed ye,' and by the most cordial thanks for the honour I had done them by my visit, and for the sympathy I had expressed for the unfortunate son and brother. The two little ones had, in the meantime, lighted a couple of dry faggots, by way of torches, and accompanied me out over their irregular mountain path. When at last I drove them back, and bade them farewell, I saw them for some time standing together on the hill-top throwing the light of their torches before me on my path, while their clear, sharp, childish voices echoed around, as they shouted, 'Take care, your honour! take care. God speed ye!'"

We now take our final leave of Kohl's 'Ireland, and shall look forward with interest for the appearance of Kohl's 'England,' or 'Scotland,' as circumstances or the traveller's inclination may decide.

OUR LIBRARY TABLE.

La Commedia di Dante Allighieri, illustrata da Ugo Foscolo, 4 vols.—The history of this edition, as told by the publisher, is briefly as follows.—Ugo Foscolo undertook to prepare, for Mr. Pickering, editions of the four great Italian Poets, but ill health and the perplexities of his later years, prevented the fulfilment of his intention. With Dante, however, the first of the Series, he had made such progress, that Mr. Rolandi purchased the MS. for 400*l.*, and the result is before us in a very handsome illustrated edition. The text is said to have been prepared with great care, and after a scrupulous examination of early manuscripts—and there is prefixed to the work an elaborate essay on its history, and a critical examination of the various biographers and commentators—and affixed to it a life of Dante drawn from his works, a bibliographical history of those works, and a very comprehensive Index. On the whole, this edition will, we think, be acceptable, and prized equally in Italy and in England.

The Grave Digger, by the Author of the 'Scottish Heiress;' 3 vols.—The manner in which certain clever landscape painters are said to have composed pictures from blots of ink fortuitously thrown about on paper, is recalled to us by this novel, which seems to begin, continue, and end by accident. A traveller, just returned from the continent, stops, by accident, at a pot-house, in "one of the narrow, deep lanes, that run into Fleet Street," there overhears, by accident, news of his lady-love, which decides the happiness of his life—there makes acquaintance with a humourist, who accompanies him as Sancho Panza in his Quixotical wanderings—by one stroke of the pen loses his fortune, and regains it by another. But in working out this amazing and plot-less story, as

Digitized by Google

seems to be, the author of 'The Grave-Digger' does not wholly discredit the opinion we had formed of him from his 'Scottish Heiress.' He is dry, shrewd, and pathetic in description, as the case may be: copies Dickens more than once, it is true, but more than once gives signs of power, which, if rightly cherished, and rightly directed, would enable him to go alone. Much thought and discipline and reconsideration, however, must be called into play before he can produce a work which will be agreeable to the taste of the general public, however promising in the apprehension of the critics.

Memoirs of W. R. Elliston, Comedian, by G. Raymond, Esq.—This is but a first volume, and brings down the narrative only to the year 1810. As these Memoirs have already appeared in *Ainsworth's Magazine*, this announcement will be sufficient; and we are not sorry to escape from criticism, for we have a great dislike to theatrical biographies; the best of them, with the exception of Cibber's 'Apology,' are but jest books, and rarely good of their class. Mr. Raymond, however, has done his spiriting gently, and with discretion.

The Soldier of Fortune, by Henry Curling, Esq., 3 vols.—This novel ought to have been printed on grey paper, bound in black cloth, and reviewed by a Mute (only that Mutes are proverbially a mirthful class). The Soldier of Fortune! why, Ratcliffe Blount is a soldier of *mis*-fortune, if ever there was one. Murders, duels, fires, shipwrecks, pursue him like (mourning) "rings and (passing) bells,"

> That he may have dolour wherever he goes.

Does he step in at a crisis, to rescue oppressed Innocence?—he lays about him so stoutly, that both the victim and the miscreant perish. Is he driven into fighting a duel?—in spite of the most resolute determination to the contrary, he *must* kill his man. Do warm and liberal friends spring up, at the moment when he is discarded by his father, and intrigued against by his stepmother's Jewish kindred—do they promise to leave him their fortunes?—his valet (only a week in his service) cuts their throats! Fatalist Joe, in 'Tylney Hall,' was a perfect Seged in the abundance of his felicity—Murad the Unlucky, a Polycrates in the constancy of his prosperity compared with poor Ratcliffe Blount. To make the round of calamity complete, Mr. Curling should have brought him in guilty of bigamy: but that trial was to be spared the hero, since a wife and a fortune were *made up* for him, ready to come in at the last pages of the tale. What is the use of such extravagancies as these? As works of art, they are valueless. Even the clever 'Quarter of an Hour too soon' flagged, though merely an Annual historiette; for the reader soon perceived that the trick was to be reiterated: how much more wearisome, then, must be two volumes and a half full of calamitous chances and fatal blunders. As moral lessons picturing life (in spite of all the professions made by our author in his preface), they are worse than useless.

My Sonnets.—The egotism of the title is continued and repeated in the introductory sonnet. The writer exclaims—

> Sweet Sonnet! my winged thoughts O treasure still;
> I love them, let the world think what they will.

This is injudicious. We have read better sonnets, and we have read worse. Though seldom regular in their form, most of them satisfy the ear well enough, and are calculated sometimes to persuade the reader that because they are conceived in poetic diction they are necessarily poetic. Nor are they wanting in talent and learning; yet is their merit not sufficiently decided to demand a positive opinion. Equivocal versification is the evil of the time, and the sonnet, though a brief form of poetry, is one of the noblest. Let only the strong attempt it.

The Mathematician, No. 1, edited by T. S. Davies, W. Rutherford, and S. Fenwick.—"Most mathematicians," says the prospectus, "have felt and lamented the very limited means which at present exist for the communication of their researches to the world." The greater part, then, of the mathematical world will be glad to support Messrs. Davies, Rutherford, and Fenwick with "researches" if those gentlemen will only find print, paper, and publication. How is it then, that in this first number there is not a single paper furnished by any one except Mr. Davies, Mr. Rutherford, or Mr. Fenwick? We should recommend a greater range both of contributors and subjects: most of the present number is on algebraic geometry, and of seven questions proposed for solution at the end, six are on algebraic geometry. We hope that No. 2 will correct this great mistake in No. 1, and that the work will deserve and obtain success: we hope also that hints such as that which appears at the end of p. 44 will not be found in any future number.

Cant, a Satire.—The time has long gone by for such a poem as this—if such lines as

> Forbade improvement's infant mind to advance,
> And matched his cunning 'gainst man's ignorance,

can be called poetry. Satire, too, is out of date; no one regards versified satire now-a-days. The amenities of life seem to have superseded the severe, though hearty, manners of ruder epochs. People like to enjoy themselves and others, and satire puts them out of temper with the world, and perhaps with their own hearts. Satire, too, should deal with the vices of the social state, with the abuse of privileges, and the corruption of individuals or corporate bodies. 'Cant' is directed against institutions and governments, denying their inherent utility, not calling for their due administration. There might have been a time when this tone of remark would have been responded to; but now it will scarcely find one sympathetic reader. Nor is there any attraction of style to compensate for the want of interest in the subject.

Companion to the Almanac for 1844,—contains an able paper 'On Arithmetical Computation,' by Mr. De Morgan; An Abstract of the Population Returns for 1841; Reports from the Vaccine Institution and the Registrars General; Papers on the Statistics of Crime; on the United States of America, and on Railways; Abstracts of Acts of Parliament and of Parliamentary Documents; a Chronicle of Events and Meteorological Table; and the notice, to which we are accustomed to refer under the head of 'Public Improvements.' The present Report commences with the British Museum, which, however, is more briefly and drily adverted to than might have been expected—as if it were a question with the writer, whether the "façade" would turn out "a public improvement" at all. This silence may be discreet, but it is not satisfactory; and we doubt the discretion, because it seems to indicate ignorance of a notorious fact—that in the architectural world the "façade" of the Museum has given rise to a good deal of remark and angry expostulation. Oddly enough, an "unawares" hint slips out in the next paragraph, which begins by telling us that—"if secresy has been observed in regard to the British Museum, such has not been the case with the *Palace of Westminster*;" thus "secresy," it seems, there has been, and we are left to infer that it has been remarked on. One or two new buildings in Lothbury, "which is growing to be a sort of City Pall-Mall," are pointed out with approbation; and honourable mention is made of the Doric screen in front of the Marquis of Westminster's, in Grosvenor Street. Of churches, very few are particularized. Mr. Cockerell's building at Oxford, for the Taylor & Randolph Institution; the Proprietary College at Cheltenham; Lincoln's Inn New Hall and Library; and the Brighton Railway Terminus, near London Bridge, are all illustrated by views. That of the last-mentioned structure, however, is shown only so far as it was advanced at the time the drawing was made,—which, instead of being a disadvantage, is the reverse; the gateway, campanile, and portion of the main building, constitute a plensing group of Italian architecture; and it so happens that this fragment forms in itself not only a regular but well-proportioned composition; yet the building is to be carried on to more than twice the present extent, in consequence of which it will look considerably lower than it now does, and the individual features will not tell with the same effect. This is made evident by an elevation which has been published of the whole range of building, and which further reveals a defect—whether proceeding from caprice or oversight—in the composition; for though uniformity is obviously aimed at, the façade, consisting of a centre building and two retiring wings, with gateways of similar design, there will be but one campanile, and that tower will be placed so as entirely to *dislocate* the arrangement. If there were to be only one tower of the kind, that ought to have been placed in the centre of the composition; there would then have been, what will now be wanted, a marked central feature, and striking outline; or the tower might have been erected at one extremity of the façade, so as to be quite an independent structure; but to stick it up where it disarranges the whole by coming in *between* the main building and south wing, which is thus pushed further out than the other, is a violation of architectural syntax, and a sort of blundering which we should not have expected from one who has shown so much taste in his details as Mr. Turner has here done.

Almanacks.—One of the best, if not the cheapest, of the family is Gutch's *Literary and Scientific Register and Almanack*, for 1844, packed from its *Alpha* to its *Omega* with knowledge—whether useful or not, we must leave the public to decide.

[ADVERTISEMENT.]—MR. AINSWORTH'S NEW ROMANCE, 'SAINT JAMES'S: OR, THE COURT OF QUEEN ANNE.'—England in Anne's time offers a subject for the novelist, unequalled in brilliancy by anything attempted in fiction. The painter who takes the manners, morals, and motives of the leading persons of that day, finds food for all readers, in the astonishing diversity of his scheme. Mr. Ainsworth announces this as the subject of his new work, to be published in the 'Magazine' bearing his name. How is it that no accomplished romancer, ambitious of embracing the whole subject, has found his way into Anne's court till now? When will interest ever cease to attach to the doings of the great Duchess during her long sway, or the renown and disgrace of Marlborough? No Spanish comedy was ever half so rich in intrigue as the stories told of Mrs. Masham and of Harley; history has nothing more desperate and piquant of its kind, than the struggle between St. John and his great rival, while romance itself has few narratives among its records more extraordinary than the secret influence of the court of St. Germain's at that period, and the murderous attempt on Harley, by which the treachery of the Marquis de Guiscard was signalized. 'St. James's,' at that day, was the scene of plot and counterplot, of brilliant and original character, and of action so incessant and eventful, as to have no rival in courtly history. But this is not all. In that, the Augustan age of our literature, state interests, profound as they were, are matched by the associations awakened by the names of Swift, Pope, and Prior, of Steele and Addison, of Gay, Arbuthnot, and half-a-dozen other spirits, who, at another season, would each be the centre of a little world of interest. Never were such wits clustered round a court; and happy is it for the novel reader, that the same pen which has so aided the literary enchantments of the reign of Victoria, should now employ itself in tracing the lustre of the times of "good Queen Anne."

ROYAL ACADEMY.

PROFESSOR J. H. GREEN'S LECTURES.

LECTURE II.

The Conditions of Beauty in the Beautiful Object.

THE theme, which I commenced in the introductory lecture of this series, and expressed my intention of completing in a concluding address, I now resume; and the more willingly, that, however pleasing it may and must be, both to a lecturer and his auditors, to be understood and to understand fully and at once, it would be irrational to expect this in a discussion on Beauty and Expression—a subject of controversy and unfinished investigation from Plato to Sir Joshua Reynolds and Allison, almost our contemporaries.

The treatises on Beauty which have hitherto fallen in my way, have failed in satisfying me and I seem to myself to have traced their unsufficingness to two principal defects. The first, that the writers have too generally confounded the *sense and fruition of the beautiful in the mind*, which (by a term so convenient that I am happy to notice its recent renewal by some of our most popular writers) we may call Subjective Beauty, and thus distinguish it from Objective Beauty, or *those forms and qualities in the outward object, which fit it to produce the former in the beholder*, that they have confounded, I say, subjective beauty with objective beauty. This is the first defect. The second I have found in the narrowness of all the several definitions of the Beautiful, which different writers have advanced; each of which definitions well and truly describes certain classes of beautiful objects, but excludes, or leaves unexplained, an equal number, which the common feelings of mankind, from the earliest times, have concurred in characterizing as beautiful.

Now, in the former lecture, I trust that I have supplied the first defect; not only by carefully distinguishing subjective beauty from the beauty in the object, but likewise by determining and explaining at large, wherein this subjective beauty consists, namely, in such an equably or proportionably excited state of all the constituent faculties and attributes of our proper humanity, of man in respect of all that contradistinguishes him from inferior beings, and even from his own animal nature,—such an equable excitement, I say, of all these powers as prevents any one in particular from becoming the distinct object of his consciousness. Whence there results that peculiar state, which is neither mere thought nor yet mere feeling, but containing the characters of both, constitutes what it is impossible to describe, but by a reference to the experience of those who have felt it—the sense and fruition of the beautiful. This equilibrium I have called a living balance, and as it is this which constitutes the true ground and essence of Beauty, so all those intenser excitements of one or more faculties, which tend to disturb the balance, yet, in disturbing it, to re-establish it in a higher form, and by enlivening it to prolong its duration—so do these collectively constitute artistic Expression. And in Beauty and Expression, as the centripetal and centrifugal forces of all Fine Art, the artist revolves in his orbit of production.

But in avoiding the first defect, I have already provided against the other, arising from the too narrow definitions of the Beautiful. For no other definition of the beautiful, objectively, or of beauty in the object, can be given, than the fitness of the object to excite in the mind of the beholder, or contemplator, the state already described. In other words, we distinguish those objects as beautiful which tend to excite all our faculties collectively and equably, so as to produce in the harmonious action a semblance of rest; and this active repose constitutes that peculiar complacency, with which we contemplate the beautiful: a complacency equally distinct from the satisfaction given us in the discovery of the true, and from the gratification afforded by the stimulus of the physically pleasurable. It only remains, therefore, to point out, and, as far as we can, enumerate those characters and properties which qualify an outward object, and give it the power to excite this complacency in our minds; and to this I have devoted the following lecture, the Constituents and Characteristics of Outward Beauty, or the causative correspondents in an object to the sense of the beautiful in the mind.

And I might now pass to the elements, the alphabet as it were, and explain the process and mechanism by which they are rendered constituent characters of Beauty, were it not expedient for a satisfying insight into the grounds of this interesting subject, that I should previously lay before you the principal conditions under which any outward form can produce the sense of beauty in us, and consequently acquire for itself the character of the beautiful.

I have endeavoured to show, and I flatter myself not without success, that even in the products of the inanimate world, in the moment that we characterize any one as beautiful, we do actually, though perhaps without being distinctly conscious of it, regard the object as a *product*, and consequently Nature, or the presumed producing cause, as an artist. Even from the common people, when they are particularly struck with the beauty of any scene or object in Nature, it is not unusual to hear the exclamation, "How beautiful; why it 's a perfect picture!" We assume this, therefore, and that every such product supposes *a will* as its cause, and this a will that works *according to a design*. The notion of a designing intelligence may be latent and obscure, though, if we proposed the question to ourselves, what is the cause of the appearance which occasions the pleasurable excitement? we can return no other answer but that it must be a will, or a life that implies a will, though by no means necessarily a self-conscious will. Now for this lower form of the will we have an appropriate term, namely, Spontaneity, and it is a will of this kind which we attribute to the life of nature. And this is the ground of the first and most important principle of objective beauty, namely, *that every beautiful object must have an association with life and spontaneity*; it must have life in it, or attributed to it, or recal by analogy and resemblance the recollection of life in the mind of the beholder.

This, then, is the first condition, and the second is a necessary consequence of the first, namely, *that nevertheless the object must still be contemplated as a work of intelligence*. The problem therefore will be how to reconcile the association of spontaneous productivity with the idea of a work of intelligence, as that the one shall not exclude the other, but both co-exist in harmonious combination. In the works of Nature, in plant, flower, and bird, there is no difficulty, for this is what we all mean by living nature—life, spontaneous motion, the power of intelligence without the personal consciousness, instinctive skill. In the works of man this reconciliation of life with intelligent product may at first sight appear more difficult; but if the fact exist, it will assuredly have suggested words for its expression, and accordingly here, too, the ordinary language of men comes to our aid, in the terms Genius, Felicity,—made more delightful by combination with Security and Precision. We need only ask ourselves what we mean by the words, or by the defects contrary to them, and the presence of which leads us to deny the attribute of genius—for Ease and Freedom and Felicity, substitute Effort, Hardness, Rigidity and a laboured style,—and we become convinced, that in all these terms we have, in fact, been solving the preceding problem, and have expressed that medium, which reconciles the sense of an intelligent will with life, spontaneity, and that pleasurable balance of equably excited faculties, in which consist the sense and the fruition of the beautiful.

It follows, however, from what has been just now stated, that life and spontaneity, though indispensable to Beauty, will not, of themselves, constitute the Beautiful. The idea of Intelligence must be superadded; and intelligence, as implied in a will, is a necessary constituent of the Beautiful. No object is beautiful, except as it is fitted to excite, in the beholder, the idea of intelligent will as its producing cause; and for this reason, therefore, the Beautiful does not demand the Spontaneous more peremptorily than it forbids the Arbitrary, and as partaking of the arbitrary the Accidental,—for the arbitrary is an exclusion of intelligence, and by that act, the will is self-deprived of its inherent character.

No less true is the converse of this position. As the Free-Will must not be contemplated as excluding Intelligence, so neither may the idea of Intelligence be made so prominent, or so distinctly excited in the mind of the beholder, as to supersede or suspend the freedom of the will. Hence, in all works of Fine Art, in every beautiful object, the Understanding must not be obtruded as the primary power: for the understanding is essentially a faculty of Adaptation,—in all the processes of the understanding *means* only are considered, and not an *ultimate end*, that is, an end in which the mind is to rest, and which is not therefore to become, in its turn, a means to some further end,—and the satisfaction, which the understanding receives, is not so much in the resulting unity of the whole as in the mode of conspiration, and in the adjustment of the parts. Now the direct contrary is the character of the Beautiful. It is a self-sufficing whole; the many must be here melted, as it were, into the one, and in all the highest products of the fine arts, the manifold is felt in the intenser and more pleasurable sense of the one into which they blend, rather than distinctly noticed in its component parts. The unity of a work of art is not a mere result—the result only of the ordonnance, selection and co-aptation of the parts,—it is an antecedent unity, which the components necessarily presuppose, flowing out of the genial conception of the artist, and remaining present as the in-dwelling soul, which still continues to animate the whole. Even with regard to a piece of machinery, which we may, with good reason, have called beautiful, it may be observed, that we never do this till the whole task of distinctly understanding its construction has been completed—till the distinct conception of the parts having been mastered, the mind rests from its labour in the enjoyment of the whole as one. Few men of education but will have experienced an illustration of this principle when, in attending to a chain of reasoning not thoroughly comprehended, some one happy master-thought has flashed a sudden light into the mind, and the listener exclaims: "Aye, now I see it all at once! It is quite beautiful!"

This twofold condition, in any beautiful object, of impressing on the beholder the sense of its being at once spontaneous product and a work of intelligent design, may be illustrated in the pleasurable interest with which, in the inanimate works of nature—shells, flowers, and the like—we contemplate the semblances, the shadows and mockeries of Design; but which, the moment we would fix and substantiate the thought, disappear, or continue to mock our grasp. Take, for instance, the harmony of colours, and the free symmetry of lines in the wings of any one of our more splendid butterflies:—it is impossible to deny that a certain shadowy notion of design is awakened by this sportive ordonnance; but give to this notion a distinct and primary place in our consciousness, refer the appearances to some organic purpose in the construction of the animal, and we contemplate them at once as parts of a machine; and yet remove all semblance of design, and the product equally ceases to strike us as beautiful, for the evident and palpable want of design not only contradicts intelligence, but renders the thought uppermost in our minds:—even as Cato's image occupied the prominent place in the imagination of the Roman spectators, on account of its wilful exclusion from the triumphal procession of his conqueror. In the higher works of art, the known and energetic exertion of intellect in the artist is perfectly compatible with the sense of the Beautiful in the work, but it is only under the condition that our perception of this intelligence is not awakened singly in our minds, but remains secondary to, and as a something contained in, his genial Will, his productive Genius; that is intelligence indeed and of the noblest kind, but yet intelligence in the form of free-will and life. No less does the mode, in which the artist realizes his idea, and converts the subjectively beautiful into a beautiful object—picture, statue, or column—present a perfect analogy to the preceding; and, to the praise of genial conception, we further add Felicity of Execution. Still the idea of a free-will, or of a spontaneity which is its image, must be present and diffused through the whole work, for it is the main condition, under which all the faculties can exist in an equilibrium;—selection of means, contrivance, adaptive and mechanical skill, must all be hidden, as it were, in the felicity of the result, which is to call forth, in the beholder, the sense and silent attribution of a productive life, working with the facility of an instinctive intelligence, that needs neither choice nor deliberation.

We have now secured a free and clear passage to our remaining subject, namely, the Constituents of Objective Beauty, and these of course we must seek in

Digitized by Google

the simplest forms, where, instead of the distinct presence of an intelligent and productive Will, we must look only for the representatives of their analogous powers, which we have shown to be Life and Spontaneity. And the question is, what are those simple forms and movements, with which—by an instinct not less universal than humanity—the idea of the functions of active life are indistinctly associated, and this so universally, that we are compelled to infer that the connexion takes place by a law of the human mind. Such elementary associations, therefore, in contradistinction from the arbitrary or accidental connexions of individual minds, form part of the language of nature, and are, in the strictest sense, symbolical.

We have then to discover the Symbols of those spiritual acts and attributes, the harmonious excitement of which constitutes Subjective Beauty, and these symbols must of course be found in reference either to the eye or ear; though for obvious reasons I shall here confine myself to the eye. And here it is evident that the elementary symbols of the Beautiful will be Lines and Colours; of which the former may exist singly, the latter only in combination with the former, though they may, nevertheless, work by a charm of their own.

With an experience, the perpetual recurrence of which, while it prevents our conscious reflection on the fact, on that very account blends with the similar indistinct sensations of our own life, we observe throughout nature the *straight line*, existing unassociated with the curvilineal, to be the character of the Lifeless, and to be progressively modified in its ascent from the lifeless to the animated, through the intermediate realm,—the vegetable creation,—to which we ascribe life, but not animation. Further, a coalition of straight lines, reducible to no rule or preconception in their comparative lengths and relative positions, by an experience no less uniform, we have connected with the Fragmentary, the Imperfect, and the Casual or Arbitrary. Lastly, the only form in which the straight line, universally contemplated, claims a place in the order and perfection of nature, is that of the Radius, which may be regarded as necessarily resulting from the continual and progressive self-repetition of a point to a globe, the original point remaining as the centre, while the limiting points in all directions constitute the spherical surface. The most simple form of all organic bodies is the spherical, as we notice in the germ and egg, the globules of the blood, certain infusoria, and in the cellules, which of late have been shown to be the basis and primary element of every organic structure. The primary conception of the organific process is therefore the expansion of the point to the sphere by an act of radiation, in which the straight line is equally a co-efficient with the curvilineal; and the continual modification of the curvilineal by the straight line in the construction of living bodies, is further evinced in the elongation of the sphere into the ellipse, its protrusions in the formation of feelers, limbs, and other instrumental apparatus, and in the lengthening of the forms during growth. The primary conception of this straight line, therefore, presents it to us as subservient to the circular and curvilineal; and let it be noticed, that even in this most abstract or universal conception, the legitimate straight line exhibits itself as an act, a function, determinate motion, which, whenever the aim or determining power is made intelligible, becomes, of course, expressive of an act, or tendency to act.

But here it will be necessary to impress two points on your attention. I have said that the straight line, when not contemplated as a radius representative of action, is characteristic of the inanimate, and especially of the lifeless. This is true; but it must not be forgotten that the existence of the lifeless, or that which appears as such, is indispensable to the manifestation of life; and secondly, that with the lifeless, even from its absence of inward powers, there is necessarily connected a comparative exemption from change; and consequently, where this is not counteracted, a character of strength and solidity. In what language on earth is not the rock the metaphor of passive and supporting strength, of that on which reliance may be placed?

The next point is, that though in the lifeless object the form cannot be referred to will and mind in the object, it may yet be referable to a will and intelligence as the impressing cause from without, and as such, therefore, representing the intelligent will, may be an object of complacency to an intelligence that contemplates it;—for in all outward objects, the human mind seeks to find a reflection of itself, delights in it when found, and when not found, delights to impress it. The poet, the botanist, the enlightened lover of nature, finds in the venerable yew-tree the marks of fitness, correspondency, in short, all the characters of an intelligent author. In elder times, in the youth of mankind, most happily realized in the early periods of Greece, when the imagination worked as the proxy of the reason, each lofty growth of the forest had its Dryad or Hamadryad, and the beauty and intelligence felt therein was referred to an in-dwelling agent; and there are moments in which every man of sensibility, who has cultivated the sense of beauty in nature, during the contemplation of some magnificent tree in its grandeur or beauty, without adopting the fancy of the mythological time, yet feels how natural that fancy was. Descend a few steps lower in the scale of mind and cultivation, the same instinct will be found, but without the same perception,—the marks of Will and Intelligence are not found, but they are missed,—what is not found must be supplied; and the venerable yew is trimmed and shorn down to an Adam and Eve, or a peacock! Sufficient proofs, first, that not only the Beautiful, but that whatever appears as Beauty, must have some reference, more or less distinct, to intelligent Will; and secondly, that there is *a scale of Beauty*, proportioned to the order of minds, or to the different degrees of cultivation, to which the constituent faculties, and still more, the harmony of all these faculties, have attained; and of this scale, though to no part of it can the term Beauty be absolutely denied, yet to the higher grades alone must we attach the name especially, and without qualification.

I am not certain whether our language can supply terms of common use capable of designating this difference; at least, the Latin seems in this particular instance more happy. The lowest, or most general species of the Beautiful, is expressed in the word *forma*; and availing ourselves of this, we may consider the word Form as expressing the necessary condition of all objective Beauty, and as itself beautiful in the lowest grade. If this Form exists for itself alone, or most prominently, the result is Formality; and we feel that the Formal, without precluding the sense of Beauty, yet counteracts it, for minds at least capable of a higher species, by exciting the craving for a something else that is not present. To minds of a more vulgar character, on the other hand, this very Formality constitutes the Beauty,—it is the great dawn of the sense of the Beautiful on the half-awakened mind. But when this Form co-exists with other pleasurable elements, as in the golden wheel given by poet or painter to the chariot of the God of Day, the Formal undergoes, as it were, an apotheosis, it passes into the *formosus*; and though a something of the pedantic would now attach to the introduction of the Formose into our own language, yet I could mention some score or more of polysyllabic words derived from the Latin or Greek, for the introduction of which not half as good reason could be assigned.

In what has been now said, I have shown the principle of Symmetry, and this in its lowest and simplest form, namely, a symmetrical arrangement of straight lines. Take a straight line of itself, and there is nothing to exclude the notion of the Causeless, Arbitrary, Imperfect. Divide it unequally—it has the effect of Accident. Bisect it, and it begins to assume the character of an intelligent purpose. Let the divisions of the same line be numerous;—if equal, a *sameness* is the result; the regularity becomes either the mark of a purely mechanical purpose—a necessity in order to some extrinsic design; or by the multiplicity produces the contrary effect, that of Confusion,—a painful effect, which we all instinctively feel in the equal aversion with which we regard the shapeless jelly-fish and the multiform centipede. But let the divisions be unequal, yet *proportionate*, and a complacency is felt; for here both the powers are present and reconciled—Intelligence and Freedom;—it is Freedom self-governed that manifests itself in the production of Order.

We may ascend a step higher, yet still remaining within the precincts of lifeless nature,—and in crystals we behold a number of straight lines, bearing an evident relation to each other, and, as such, excluding all suspicion of the accidental and casual; and though the products of crystallization be lifeless, we are yet compelled to refer this mutual correspondency of its lines and surfaces to a principle in the product, which yet is not life, for we do not refer it to any individual agency. The agency is the same in every individuum of the same class; we refer it, therefore, to a law in nature, and in this we supply the necessary condition of Will and Intelligence, without which we may safely defy any man to conceive a law. But it is only in the lowest sense of the word Beautiful that we could call a crystal, merely as a crystal, a beautiful object. It may be simply formal; but if in the multiplicity of its lines and surfaces there is a symmetrical unity, which enables us to see the total form as a whole, while the perception of the manner in which the complex parts conspire to the production of this effect is comparatively indistinct, there arises in our minds the notion of a certain Felicity, which (as I have shown) is associated with life, freedom, and a Will working in harmony with, but yet not controlled by, the intelligence. If, further, in the angles and surfaces of this crystal we see the play of light or lustre,—a kind of substitute for life, an attribution of motion in the moveless,—then we no longer hesitate to name it beautiful, and we class such crystals among the beauties of still life.

And here we reach the limits of the Rectilineal, single and unaccompanied. Anticipating its combination with higher powers, we first showed that it contained in itself the possible character of determinate motion, function, and, as such, was the simplest element of Expression. Excluding this, we found it characteristic of the Imperfect, the Fragmentary, and the Lifeless; and yet, even from the necessary properties of the latter attribute, we found in it the capability of representing the Solid, the Secure, the Permanent. We then considered the forms in which the Rectilineal could be presented free from the characters of Imperfection, and from the accidentality, which marks the negation of intelligent Will; this we found in Symmetry, and in the Formal, as the minimum of Beauty; from the Formal we ascended to the Formosus, from the Formal to the beautiful in Form, and in the crystal and the sparkling gem we found the summit of the Beauty of Still Life,—that is, of the Lifeless, under conditions that imitate or recal the associations of life, mind, and freedom.

Finally, if beauty of form is to be found in the Straight Line, it must not be merely as a result from the adjustment of parts, however necessary a condition of beauty; the wholeness must be supplied by *intrinsic* relations, and this can only be effected by Composition, which, in order to satisfy the requirements of the Beautiful, must far rather remind us of the unity of the forms of *organic life*, than that of the combinations of *mechanism*. Even in the single line, as we have already seen, in order to its presenting a pleasing form, there must be divisions, and these divisions having such a relation to each other, that a unity is the effect; and this will be more pleasing, will approach nearer to the Beautiful, according as the sense of unity is more present to the mind than the mode in which it is produced by the proportion of the parts. In order to be convinced of this, we need only present to the fancy a rectilineal column, the total form of which results from three or four obvious, and as it were mechanical ratios, and contrast this with the proportions of an Ionic or Corinthian pillar, in which the proportions, though demonstrable in science, yet for the eye (especially if presented in a single column of porphyry or verd antique) pass so insensibly the one into the other, as to be known only by the total effect,—felt, rather than at the moment understood. In a common dwelling sufficient unity may be given by some simple plan of symmetry; but if, instead of an ordinary house, a palace is intended, or any magnificent edifice characteristic of wealth, power, or taste, more prominent and strongly marked distinctions and relations are required, by the super-addition of wing, tower, cupola, colonnade, or whatever decorative supplement the genius of the artist may supply; but, assuredly, as every organic whole, from the polyp up to man, indicates a higher and more effective principle of unity, in proportion as the parts are more

Digitized by Google

numerous, and at the same time more various, so—in order to secure to any such multitudinous assemblage of architectural parts the complacency of fine art, and that most general condition of the beautiful, the many seen as one,—organic unity must have been given by intrinsic correlation, and by the one and indivisible spirit in-breathed by the genial mind of the artist. In proportion to the attainment of this unity—by the close interdependence of parts, each having its several end, and by their intimate union to one,—will the design be perfected into the Individuality proposed, be it a York Minster, a St. Paul's Cathedral, or a Parthenon; and wherever any such felicitous result has been achieved, the constructive idea, as in the forms of organic life, will still, as it were, animate the whole, and be expressed in the total character and in the prevailing unity. In short, whatever hath not life in itself, can receive the character of the Beautiful only by referring us to a will, intelligence, and life, elsewhere existing, and must imitate what in its own nature it does not possess; and herein I seem to myself to have found the common ground of architectural and organic forms, which, if it does not justify, may yet explain the analogies which Vitruvius and Michael Angelo have asserted to exist between the proportions of architecture and those of the human form. The natural bee-hive has not without good reason been contemplated by philosophic naturalists as analogous to crystallization, and I know not why the magnificent edifices of a Palladio and a Wren, a Windsor Castle, or the time-honoured remains of our ecclesiastical architecture, may not be contemplated as crystals in their highest power and dignity,—crystallizations of human genius.

From the rectilineal, from crystallization, and those forms under which the beautiful can be combined with the rectilineal, we ascend to the Vegetable World, and therein to the birth of the Curvilineal, and its combination with, and modification of, the rectilineal. In the vegetable world life first manifests itself, though in its first and lowest form, namely, growth; for even the functions of the vegetable stop in the product,—growths, not acts, are the manifestations of its inward life. Lines, surfaces, angle, the column, meet us here as in the crystal world; but here the rectilineal is ever combined with the curve, and as in the trunk, the stately column, the rectilineal remains only as giving the direction to the form: and herein, again, no longer appears to obey an outward or mechanical necessity, but the trunk swells and diminishes harmoniously, with a variety in each individual of the same species, that we cannot but connect with the power of an inward life. In the foliage, again, we meet, as in the crystal, with straight lines meeting in angles, but bending into the curvilineal, with more or less approach to the circular, and the most so in those which we regard as most beautiful, the petals of the flowers. In how many of these, or in their nectaries, we perceive the same source of pleasure that we have in contemplating the elegant forms of the ancient vases,—that harmony of form, which the free and living mind of the artist communicates to the clay, and thus makes it an enduring echo of his own productive life.

Meanwhile the connexion with intelligent Will may here, too, be traced. The Cathedral-aisle in the forest; or the cool cavern-like Hollows in its deeper and denser shades; the Pillar-like form of the trunks, while the intertwining branches constitute the apparent Roof—all these associations and expressions of delight are familiar to every lover of Nature and of forest scenery in particular. It is a source of delight to the mind to behold, as the result of a will independent of our own, forms analogous to those which we produce by a determination of our own will. And if we behold with delight the living forest shape itself into forms which, from their fitness to devotional feelings, we had been wont to impress on lifeless nature—so, on the other hand, in our uncertainty with respect to the architects of the minsters and cathedrals of England, and under the excitement of the same feelings, we may almost fancy them the growths and products of an in-dwelling life—petrefacts of a vegetative life, that, with instinctive intelligence, had grown into a self-constructed temple.

In passing on to the higher forms of life, I have to remind you that the Rectilineal is not necessarily inferior to the Curvilineal, but only when in disjunction from it. As the Radial, we have already seen it simultaneous and in necessary union with the Spherical; and the true position would, therefore, be, that the Straight line becomes, in its own right, an equal co-efficient of the Beautiful, and equally a character of life and volition with the Curvilineal; but that, in this case, it represents a yet higher form of life than the Curvilineal—it becomes the symbol of Function, of determinate movement, of intelligent act and purpose, and as such, the exponent of the highest form of life, that of animated beings, and whatever of higher name arises out of it.

The sheet-lightning may express the state of the air, and its expansion become an object of beauty—even of tranquil beauty: the lightning in its rectilineal path, or by capricious change in its direction angular and zig-zag, is among the most striking expressions of Nature—the wild, the terrific function of the clouds! Thus, the human arm in repose, naturally adopts some curve, as we so often see in the Madonnas and Holy Mothers of Raffaelle; and the position adds to the quiet beauty of which it forms a part. The same arm called into act, as of resistance and conflict, becomes straight as the sword with which it prolongs itself; and scarcely less in the higher function of command and communicative power—witness the Saviour in the Cartoon committing the trust of the keys. Again, in the human countenance, make the face round, and the artist intends it as the negation of expression: with all aids and favourable accompaniments, a round face is, at best, but pretty. In the oval, we recognize the line of beauty; but to give it expression, though it were but the expression of dignified beauty, the straight line must modify the forehead and nose. In the state of quiet, the well-formed lips present a gentle curve: let the same express some determined act, or energy of the will or intellect, and they become compressed; and that compression, when habitual, becomes the symbol of the energetic and commanding genius.

Thus, we are led back insensibly to our original and fundamental position—namely, that Beauty and Expression are the two poles—the centripetal and centrifugal forces of all Fine Art. And now, in the simplest elements of form we meet the same opposition—the same combination. In the Curvilineal, in all its varieties, we have the characteristic symbol of Beauty, of Life, and Spontaneity, as manifested in growth and product; while, in the Rectilineal and Angular—sometimes as such, more often as modified, but always as connected with the former—we have the symbols and elementary characters of all Expression; that is, of Life and Will—as Passion, Act, or Purpose.

That the Curved Line, however, is not so properly named the symbol of life universally as of the products of life considered as the power of Growth; and that, on the other hand, the Straight Line may not be declared the character of the Lifeless and Imperfect, unless the position be qualified, by adding its disjunction from the Curvilineal, and unmodified by it,—are no barren truths. Thus, in order to make the Curved Line expressive of the higher powers of life, the line must not so return on itself as to become, as it were, imprisoned in its own outline. The circle, or disc, the hollow or solid cylinder, the globe, and the like, will express the permanent product of life, rather than life itself. To express the highest form of Beauty, which is, at the same time, the higher form of life—Will and Intelligence—the line must so return on itself as to be, at the same time, progressive, and not merely cyclical: it must express the direction, the determinate function, of which the Straight Line is the symbol, with the continuity, the self-retention, the continuance of the past in every present, and in every present the anticipation and promise of a future, of which the Cyclical is the exponent; and this is given in the Spiral Line, and in all those endless varieties of Undulating Curves, the various geometrical forms of which will be found by the gifted eye through the ascent of Nature, from the plant and zoophyte even up to man—will be found, I say, gleaming through the actual form like those regular figures, Circle, Ellipse, Triangle, Pyramid, which, modified and disguised by spontaneity, volition, passion, and intelligent act, may be traced in the master-pieces of our great artists.

But my time and limits will not permit any further illustration, and will compel me to be brief and general in the remaining element of Objective Beauty—the Colours, beyond what the interest of the subject would, but for my limits, have required.

While we were treating of Form, or the produce of lines, we saw reason to regard the curved line as more properly and eminently the elementary symbol of Beauty, the straight line in combination with it as the symbol of Expression; but when we take the Lineal, including both straight and curved as one constituent, and Light and Colours as the other, a similar opposition will be found between these as between the straight line and the curved;—by opposition, I mean a pre-eminent character of Beauty in the one, of Expressiveness in the other; and in comparing the Lineal, that is, the Form, with the Colour, I do not hesitate to affirm that the Form belongs more especially to the Beautiful, and the Colour to the Expressive. The rudest beholder feels the effect produced by painting the grey walls of an apartment, and exclaims: "What a life it gives to the room!" or "How much more lively it looks!"—And the ground of this is in the nature of Colour itself;—it is the only language for the eye, by which the inward qualities of the objects without us are expressed. Were we to consider this, however, as an expression in behoof of science, or for the discovery of truth, the deciphering of the same would require such an infinity of researches and accumulative experiences that, though the fact cannot be doubted that the colours of objects stand in a connexion of cause and effect with the distinct qualities and individual natures of the coloured objects, yet the language must be confessed to have failed hitherto in becoming an intelligible language for scientific purposes. But with all this the poet, the painter, or the enjoyer of beauty has little or no connexion, little or no interest—sufficient for him is it that Colour is Expression generally, gives an expressiveness to Nature of what in each particular instance he may be ignorant or uncertain, but which he still contemplates with a complacency not dissimilar to that with which a Columbus may be supposed to have watched the tremblings, dips, and declinations, of the magnetic needle in the compass, assured that therein the whole earth, the universal mother Nature, was revealing to him some great law and function of her own life, though in characters of which he had not obtained the key—a complacency not unlike that with which we should behold a group of figures in evident animated conversation, but at a distance too great to distinguish the subject which interested them. Need I say that this very generality, this absence of specific and definite significance, renders it but the more fit to call all our faculties into that equable and proportionable excitement, into that living balance, in which we have found the essence of Subjective Beauty, the sense and the fruition of the Beautiful? and if we pass from Colour generally to particular colours, it would not be difficult, I suspect, to establish their symbolical character, that is, an Expressiveness of Affections, Feelings, Total states of the Mind,—gay, solemn, tender, vehement—which in tending to disturb the balance, enlivens and prolongs its duration.

Finally, Gentlemen, if in the beginning I ventured to assert that the perfection of artistic genius consists in the integration by balance of the powers of the inward man in order to the production of expressive Beauty; and that Nature in the sphere of her productivity aims at a similar consummation in the crown of her productions,—then, I shall have completed my task by showing that the organic frame of man is the final achievement of that type of characteristic excellence, which, in being the corporeal condition of the proper humanity, constitutes its pre-eminent claim to expressive beauty.

In a comparison of the frame and capabilities of man with those of the inferior animals, if we take the human frame as the ideal standard of Form, it will be found that all others present so many declensions from the Idea; and it will be admitted from this survey, that man is unquestionably endowed with that structure, the perfection of which is revealed in such a balanced relation of the parts to a whole as may best fit it for a being exercising intelligent choice, and destined for moral freedom. It is not, therefore, an absolute perfection of the constituents singly, but the proportional developement of all, and their harmonious constitution to one, for which we contend;—a constitution which implies, in man, pre-eminently the endow-

Digitized by Google

ment of rational will as necessary for the control and adjustment of the balance. Man has not the quick hearing of the timid herbivorous animals, but it was not intended that he should catch the sound of distant danger, and be governed by his fears; he has not the piercing sight of the eagle, nor the keen scent of the beast of prey, but neither was man intended to be the fellow of the tiger, or a denizen of the forest. Hence, too, the departure from the perfect proportion of man, which we observe in the inferior animals, may be regarded as deformity by exaggeration or defect, dependent upon the preponderance of a part that necessitates a particular use, or the absence of a part that deprives the animal of a power, and in both instances alike abrogates that freedom, for which provision is made in the harmonious proportions of the human fabric. Dilate the head, and you have a symptom of disease: protrude the jaws, you have a voracious animal: lengthen the ears, timidity is expressed: let the nose project, and the animal is governed by his scent: enlarge the belly, and you are reminded of the animal appetites: long arms may fit him for an inhabitant of the trees, and a companion of the ape: and predominant length of legs is infallibly associated with the habits of the wading or leaping animals. In all, regarding man's form, with reference to his destination, as the ideal standard, the means become ends, deformity prevails and becomes the badge of unintelligent slavery to the mere animal nature.

Man alone is erect. It is to this posture that the body of man owes the character, impressed on the total frame, of its emancipation from subserviency to the mere animal needs, and becomes expressive of mind and of free and intelligent action. It will be seen that the lower limbs, answering the purposes of support and locomotion, have alone any obvious or necessitated utility; while the upper extremities are in consequence left at liberty as the ready and facile instruments of his will. Hence, too, the senses are best freed from their servitude to the bodily wants, and the countenance is raised as the expressive exponent of thoughts and feelings, which the mouth declares and interprets by words. And thus, as the stem bears the corolla, the head is carried on high, as the most noble part of the frame which it surmounts; all the rest of the body seems intended to carry it;—and when considered in its fitness for expression, it may be said to be representative of the whole man.

In man, then, we find the organic structure completed, and the total organization exhibiting the most perfect attainment of corporeal existence as the medium and condition of the operance of soul, spirit, or power. In all the animated beings below man the body may be said to constitute the animal, in him it is the organ and instrument of a moral agent; in short, the organization of man is no longer the mere perfecting of the animal structure, it is its *apotheosis*.

It would be a mere waste of time to dwell here on the objective beauty of the human form. It is unnecessary to insist on the ordonnance and correspondency of the parts, which constitute the symmetry of the body; yet it will be observed, that even in its great divisions, while order is preserved, the formality is hidden and subdued, and in all its forms the tendency to any regular figure is modified and disguised by the spontaneity of life. The elliptical figures which prevail in the head and trunk, and the cylindrical shapes of the neck and extremities, are but dimly perceived, and are made to relax and flow into every variety of sinuous and undulating line, of now swelling, now dimpling surface, rendered more animated in motion by an ever shifting and infinitely varied play of forms, blended and united by the pliant tegument, which at once hides and reveals the moving forces. And you will not require me to remind you, that under all the varieties of expressive movement, the very structure of the body, and the mechanism of its motions, tend to reduce its movements to the beautiful, or to solve them into grace, or animated beauty—a fact, of which we may convince ourselves in watching the sinuous movements of the dance, where, aided by the totality of motion in the dancer, they present a harmony by continuity, a problem of grace, which is ever solving and ever beginning anew. Beauty of attitude and grace of carriage are, however, intimately connected with the maintenance of the equipoise of the body. No attitude can be beautiful, in which the idea of repose is not conveyed by that permanence and security which results from a perfectly felt balance. "Grace of carriage requires a perfect freedom of motion, with a firmness of step arising from a constant bearing of the centre of gravity over the base of support"—it includes ease and security; and in both, whether it be motion becoming fixed as attitude, or attitudes presenting themselves in the shaping flow of motion, beauty and grace reveal themselves in self-command, in freedom made manifest by self-control.

And here we are again led back to that characteristic excellence of man's frame, which in being the corporeal condition of the proper humanity constitutes its pre-eminent claim to expressive beauty,—namely, that balanced relation of its parts, which while it permits and requires beyond that of any other animal the adjustment of all the living powers and faculties to a balance, is in truth the expression—or aptitude to express the state and attainment—of the inward balance of the moral mind. Not the equilibrium itself is nature's work and gift, but only the capability, the materials and the fitness: the equilibrium itself must be man's own act and deed; and what other name can we give to this persistent act of balancing than unity of Moral Will, that is, of the human Personality, or conscious Self—that which every man means when he says I? Hence, if, as we have asserted, the sense and fruition of Beauty and the excellence of artistic genius consist in the balance or equably excited state of all the constituent faculties and attributes of our proper humanity, then we may affirm with equal truth and propriety that the human body is best fitted to reveal the proportional adjustment, in which the sense and productive power of beauty attest their presence; and since the harmony and equilibrium of the constituent powers of our humanity are no less the character of the moral being than of Beauty, we are entitled to add, that it therein becomes the exponent of subjective beauty in its highest dignity—that of the Moral Man, and of that integration of his being by the harmony and continuity of his Moral Will, which is the common character of Taste, of Genius, and of Moral Integrity.

It is then by the fitness of his organization for a harmony, and harmonious co- and sub- ordination of his powers, that man stands without a rival at the head of organic nature, and as the centre of that sphere of production, in which nature is artist and artizan:—it is by the fitness of man's living presence, when contemplated in the full developement of his powers, for exciting in the mind of the beholder the complacency produced by the living balance of all its constituent faculties—the reflex and echo of the productive mind of the artist—that it becomes the highest aim and most beautiful object of fine art;—it is, however, by its fitness to reveal—that which its perfection implies—the harmony of the constituent powers of the humanity, the moral life, in which all distinct premeditation of will or intellect is hidden in the spontaneity and facility of a life that moves and acts unconsciously under the gentle influence of the True and the Good—it is in its fitness, I say, to become, as the translucent medium of subjective beauty, the exponent of the moral life, that we recognize its high excellence, and therein, because grounded in the constitution of the mind itself, the subjective and ideal character of its proper beauty.

What mere outward forms, what gestures, what motions of the features can adequately convey to us the unity of the Moral Will, and the inward life of the True and the Good? The expressions of Innocence, Meekness, Tenderness, Devotion, Holiness, Dignity, Majesty—these acknowledge only a spiritual character, and consist alone with the gentle animation compatible with the unity and reposing beauty of the countenance, which is the test and pledge of the inward peace from which they spring. And it is only necessary to contrast with these the disturbances and loss of balance wrought by the gust and swell of the wilder and fiercer passions, to be convinced that the higher and properly human expressions derive their essential character from the equilibrium of the features and unity of the countenance, which manifest the presence and controlling power of the Moral Will.

And though we may admit that even in man's outward form and bearing we perceive a beauty, which in respect of its corporeal conditions is that of earth's noblest animal;—yet in contemplating the sensible body (as we are bound to do) as the symbol and hieroglyph of the inward man, the Spiritual breaks forth, the husk drops off, and we acknowledge that the proper beauty of man is the impress of the Divine Image, in which man was originally made.

OUR WEEKLY GOSSIP.

French literature has just sustained a heavy loss in M. Casimir Delavigne, who died at Lyons on the 10th of this month, at the age of forty-nine. He had been for some time an invalid, and, at the moment of his decease, was on his way to Montpellier, in the hope of there re-establishing his health. He was born at Havre, made himself known as a poet at the age of seventeen, and at twenty produced a dithyrambic on the birth of the King of Rome, which still further attracted attention to his name. At a later period his 'Messéniennes' established his poetical reputation, to which he subsequently added the triumphs of a dramatist, in 'Les Vêpres Siciliennes.' 'Les Comédiens,' 'La Princesse Aurélie,' 'L'Ecole des Vieillards,' 'La Popularité,' 'Don Juan d'Autriche,' and 'Le Conseiller Rapporteur,' comedies; 'Le Paria,' 'Marino Faliero,' 'Louis XI.,' 'Les Enfans d'Edouard,' 'Une Famille au Temps de Luther,' and 'La Fille du Cid,' tragedies. Though, we presume, M. Delavigne would not have accepted the title of Romanticist, his works are but pseudo-classical. Though they have neither the tenderness of Count Alfred de Vigny, nor the passion and force of M. Victor Hugo, they are as far, on the other hand, from the pompous regularity which the old statutes of the French Stage and the French Academy demanded, and of which we have lived—strange to say—to see a partial and successful revival in the 'Lucrèce' of M. Ponsard. Correct, elegant, high-toned, they are often rhetorically powerful, but seldom marked by those strokes of genius, and those strains of feeling, lacking which, the writer of odes must, in the end, become wearisome, and the dramatist content himself with merely a temporary success. Still, the loss of M. Delavigne will, for the moment, be felt all the more, for this very moderation. He was, of course, a member of the Académie, and held also the appointment of Librarian at Fontainebleau. His mortal remains have been brought to Paris, and his funeral was to take place on Wednesday last, at the church of St. Vincent-de-Paule. The Théâtre Français was to be closed on the evening of the funeral, and the actors have resolved to place a bust of M. Casimir Delavigne, executed in marble, in the saloon of the theatre.

The Institute of the Fine Arts has not yet assumed such a character as to justify our formal recognition of it among the established brotherhood, yet the members are active and energetic, and it may be interesting if we record progress. A general meeting, for the purpose of founding the Society, took place, as our readers may remember, in June last, at the Freemasons' Tavern. The first meeting for the season was held in the rooms of the Society of Arts on Saturday last. Letters were read from Lord Francis Egerton and Sir John C. Swinburne, Bart., accepting the invitation of the Council to become Vice-Presidents of the Institute. By the Report of the Council we find that the Institute already numbers between 200 and 300 members.—A paper was read by Mr. Park, Sculptor, on the propriety of petitioning the legislature to establish a "Hall of Sculpture," to contain "casts from all the great works of antiquity," to be open during the day to the public, in the evening to artists only, properly lighted for study.—Another paper, on the subject of frames for moveable frescoes, was read by Mr. Buss, showing, by means of diagrams, how to provide against the chances of the Intonaco cracking, or chipping off, which, he said, was to be feared from the size required by the Royal Commission in the next competition.—Resolutions were then passed, of thanks to the Royal Commission for its efforts to advance Historic Art, and expressive of the approbation of the Meeting at the "appointment of two artists of distinguished professional rank, to the offices of Keeper of the National Gallery, and Conservator of the Pictures in the Royal Palaces."

We had occasion some time since (*ante*, p. 654), in an obituary notice, to record the death of that "Royal" project for the encouragement of "artists, men of science and ingenuity" the Polytechnic Art-Union; when it appeared that the subscriptions amounted to

Digitized by Google

1160*l.* 6*s.* 9*d.* and the expenditure to 1150*l.* 3*s.*; which sum included 250*l.* distributed in prizes! We have now to add a few words of farewell to his "brazen brother" the great "National" Art-Union. It appears, from a brief, imperfect, but significant report in the *Times*, that the "annual" (?) meeting of the society took place this week at Freemasons' Hall, when it was stated, for the gratification of the credulous, that the expenditure had exceeded the receipts by a very considerable sum, the expenditure being 5000*l.* and the receipts 2600*l.*!

The Council of the Institution of Civil Engineers have awarded the following Telford and Walker Premiums:—A Telford medal in silver to F. W. Simms, for his papers 'On the application of Horse-power to raising Water,' &c., and 'On Brick-making.' A Telford medal in silver to W. Pole, for his papers 'On the friction of Steam Engines,' &c., and 'On the pressure and density of Steam,' &c. A Telford medal in silver to T. Oldham, for his 'Description and Drawings of the Automaton Balance, invented by Mr. Cotton, and used at the Bank of England for weighing sovereigns.' A Telford premium of books, to D. Mackain, for his paper 'On the supply of Water to the City of Glasgow.' A Telford premium of books to D. Bremmer, for his 'Description and Drawings of the Victoria Bridge over the River Wear.' A Telford premium of books, to D. T. Hope, for his paper 'On the relative merits of Granite and Wood Pavements and Macadamized Roads.' A Walker premium of books, to R. Mallet, for his paper 'On the co-efficient of Labouring-force in Water Wheels,' &c. A Walker premium of books, to W. J. M. Rankine, for his papers and drawings 'On laying down Railway-curves,' 'On the Spring-contractor for Railway Carriages,' and 'On the Causes of the Fracture of Railway Axles,' &c. A Walker premium of books, to W. L. Baker, for his 'Description and Drawings of the Water Pressure Engine, at the Alte Mördgrube Mine (Freyberg).' A Walker premium of books, to S. C. Homersham, for his paper and drawings 'On the construction of Valves for Pumps,' &c. A Walker premium of books, to J. O. York, for his paper 'On the comparative strength of Solid and Hollow Axles.' A Walker premium of books, to G. D. Bishopp, for his 'Description of the American Locomotive Engine "Philadelphia," used on the Birmingham and Gloucester Railway.' A Walker premium of books, to G. B. W. Jackson, for the drawings illustrating 'The description of Machines for raising and lowering Miners,' by John Taylor.

The proposed arrangements as to the English Opera House, to which we adverted last week, have been defeated by one of the parties, at the eleventh hour, making an unexpected objection. Mr. Keeley, however, as we are informed, holds to the bargain, but does not intend to open the theatre until Easter. It is due to Mr. Arnold to say, that no blame attaches to him. The "legitimate Drama" will, therefore, remain without a home for another season.

Mr. Burford has provided for the holiday-goers by opening a picture of Tréport Harbour, as it appeared at the disembarkation of Her Majesty on her recent visit to France. This, in point of execution, is the best figure-panorama we recollect, closeness of resemblance, of course, not being possible. Nor is the scene so unpicturesque as such pageants frequently become amid the regular architecture of a city; for the drawn-up troops and the drawn-out courtiers and spectators, and the royal group show in agreeable contrast to the ruder background—a small fishing town, built on a chalk cliff. All the details, as we have said, are carefully painted.

Will be shortly Closed.

DIORAMA, REGENT'S PARK.

The Two Pictures, now exhibiting, represent the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. Renoux, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. Bouton. Open from Ten till Four.—N.B. The Gloria, from Haydn's Service, No. 1, will be performed during the midnight effect of the Cathedral of Notre Dame.

Christmas Holidays.

At the ROYAL POLYTECHNIC INSTITUTION an increase of POWERFUL and BRILLIANT EFFECTS in ELECTRICITY is exhibited by ARMSTRONG'S HYDRO-ELECTRIC MACHINE. A new field is opened for investigating, on a magnified scale, a variety of objects in ART, SCIENCE, and NATURAL HISTORY, by means of LONGBOTTOM'S OPAQUE MICROSCOPE, showing also an extraordinary OPTICAL ILLUSION. New DISSOLVING VIEWS. A List of the POPULAR LECTURES which will be delivered during the Week is suspended in the Hall of Manufactures. Holloway's ORIGINAL CRAYON DRAWINGS from RAPHAEL'S CARTOONS, numerous MODELS in MOTION, DIVER and DIVING BELL. Conductor of the Band—T. Wallis, Mus. Doc. Admission, One Shilling.—Schools, Half-price.

SCIENTIFIC AND LITERARY

Geographical Society.—*Dec.* 11.—Mr. Murchison, President, in the chair. The Secretary read a paper by Dr. Beke, 'On the Countries to the South of the river Abai,' with respect to which, says Dr. Beke, the information hitherto laid before the public is very meagre; and the few details which we do possess, being derived from the accounts of *single* individuals, are subject to the defects which the unsupported relations of natives of uncivilized countries always are. Dr. Beke's memoir was accompanied by a map, showing, in detail, the several countries extending over the space between the 6th and 10th degrees of N. latitude, and the 35th and 39th degrees of E. longitude; with respect to which, the author says, "whatever may be its errors, it is, I believe, the first attempt to arrange the countries to the south of the Abai in anything like form; I flatter myself, therefore, it will be received as a valuable addition to our knowledge of these regions." It is impossible for us to do more, on the present occasion, than allude to a few of the main features of the many interesting particulars of Dr. Beke's communication. After describing the general character of the Galla table-land, as well as particular portions of it, such as Nonno, Gúma, Chelea, Síbu, and Wallégga, he mentions a vast forest as lying between Wallégga, Gúma Géra and Káffa, through which the caravans going to the last named country, have to pass. The merchants describe it as so thick as to be impervious to the rays of the sun, and say that they have to travel four or five days through it, without obtaining a sight of that luminary. In this forest, are the heads of the rivers Gójeb, Gába, and Dedhésa, and also, apparently, of the Gíbbi of Enárea. Beyond Amuru, to the westward, are Hébantu and Limmu (called Limmu-Sóbo, to distinguish it from the Limmu of Enárea), and beyond these again is an extensive desert tract called Hándak, through which flows a large river joining the Abai. This river, in its position, coincides with the Yabus, and we have here, beyond all doubt, the Habáhia of M. Jomard's informant Wáre (Ouaré.) After giving a brief description of the Gallá districts of Gúderu, Hither Djemma and Nonno, the traveller enters into a lengthened account of the kingdom of Enárea, governed by the Mohammedan King Ibsa, better known as Abbai Bógibo, i. e. "the possessor (master) of Bógibo, his favourite war-horse; such being the Galla custom of designating their chiefs. Enárea is celebrated for its coffee, of which there are large woods in the vicinity of Sakka, the capital and chief market of the country. These woods are described as containing trees, the trunks of which are from two to three feet in diameter; a size far exceeding anything of the kind elsewhere. The coffee crop begins in December. It is generally sold by the mule load, which costs a dollar, without regard to the quantity; and large powerful mules are trained as *market* mules, which carry away with them two ordinary loads. The people of Enárea are the most civilized of all Galla land, and manufactures flourish in a higher degree than elsewhere in this quarter of Africa.

Gúma joins Enárea to the W., being governed by Abba Rébu. It is the custom, through all these countries, to sell whole families for the offence of one individual; a custom more prevalent in Gúma than elsewhere.

Further (or Káffa) Djemma is governed by Sánna, surnamed Abba Djufár, who is the most powerful of the Galla monarchs. At Folla, or Polla, a town within his dominions, young male slaves are mutilated in order to qualify them for attendants in the harems of the great.

The government of Djándjero appears to be despotism, not merely absolute, but of the most capricious description. All the males, except the monarch and his children's children, have both breasts cut off, and are otherwise mutilated, in order to disqualify them for reigning. The tanners and other inferior castes are exempted from this custom, for the strange reason, that as they are not freemen, and consequently no one would submit to their rule, there is no fear of their pretending to the government. At Yejubbi, Dr. Beke saw a couple of boys from Djándjero, both eunuchs, one of whom was purchased for forty dollars by an agent of our ally, Sáhela Selassie, the Christian King of Shoa. The slaves of Djándjero are the fairest brought to Báso market. The native name is Yángaro, Djándjero being the Galla pronunciation, as Zindjero is the usual Abyssinian appellation. The people of Djandjero are pagans, different from the Gallas, and the language is quite dissimilar. Kaffa is a large and powerful *Christian* kingdom, governed by a monarch whose title is Tháto, and who claims to be descended from the Imperial family of Ethiopia. His capital is Bonga. There are only six or eight churches—probably a sort of abbey, and like those in Abyssinia, are at a considerable distance from each other; and when the king dies, his body is carried a week's journey to one of these churches, which is the usual place of sepulture of the monarchs. In Káffa, as in Djándjero and all the countries to the south of Galla-land, it is considered improper to eat grain of any sort—in fact, "grain-eater" is considered a term of reproach—the vegetable food of the country consists entirely of *énset*, which is cultivated in large quantities. So, too, the flesh of the ox alone of all animals, is used for food. Further, in Káffa, leather is not worn in any form. The higher classes wear cotton dresses, and the poorer weave the filaments of the *énset* into a coarser article of clothing. The *civet* of Abyssinian commerce comes chiefly from Káffa, which country likewise produces coffee, chaat (tea), and Koraríma, a species of coriander taken to India by the way of Massowa. In Káffa, there *is no dry season*. Grain salt is brought thither by the way of Gobo, Worátta and Dóko, *from the sea of Hind*. Suro, to the W. of Káffa, is inhabited by pagan negroes, who take out two of the front teeth, and cut a hole in the lower lip, into which they insert a wooden plug. Beyond Káffa, further to the W. or N.W., are other *Christian* countries, extending far into the interior of Africa, as far as the river Báro. The original seat of the *Gallas* is said to have been beyond the Báro. As the universal tradition among these people is, that they came from Bargáma, which is generally understood as meaning beyond the *Bahr*, or sea, Dr. Beke suggests the likelihood of its meaning beyond the Báro.

Dóko, which country Dr. Beke was, if we mistake not, the first to bring to our knowledge, has been described by the Rev. Mr. Krapf, as inhabited by a race of *pigmies*. Dr. Beke heard nothing of this remarkable fact (if fact it be); but curiously enough, another traveller, Mr. D'Abbadie, in an account of them in the *Bulletin* of the Geographical Society of Paris, describes the people of Dóko, as "very large and muscular." Their language too, he says, has some resemblance to that of Woratta, which, from vocabularies collected by Dr. Beke, is cognate with those of Wolámo and Káffa, as well as with the Gónga language, spoken still in a part of Damot, to the N. of the Abai.

We have no space for more than to enumerate the names of Kúcha or Kuchash, Worratta, Wolaitza or Wolamo, Siékka, &c. &c., all further discussed by Dr. Beke, whose paper terminated with an investigation of the courses of the rivers running north-westward and south-eastward from the high table-land, forming the continuation of the grand anticlinal axis of Abyssinia, which is to be regarded as one extremity of the "backbone" of Africa. This investigation led to an animated discussion, in which Mr. Charles Johnston, a gentleman who has lately returned from Shoa, took part. Mr. Johnston advocated views, in some respects different from those propounded by Dr. Beke.

The paper being concluded, Capt. Grover handed to the President a letter from Sir Stratford Canning, which afforded the welcome intelligence, that there was great probability of Col. Stoddart being still alive.

Astronomical Society.—*Nov.* 10.—F. Baily, Esq. President, in the chair.—The Rev. J. M. Heath, M.A. was elected a Fellow.

The following communications were read:—

'Description of a small Observatory, constructed at Poona, in the year 1842, accompanied by observations of Eclipses, &c. of *Jupiter*'s Satellites,' by Lieut. W. S. Jacob, R.N.

Various letters and communications were read relating to the Comet seen in March last.

Right Ascensions and North Polar Distances of the Comet of Mauvais, observed at Hamburgh, by C. Runker, Esq.

'On the Divisions of the Exterior Ring of the Planet *Saturn*,' by the Rev. W. R. Dawes.

INSTITUTE OF BRITISH ARCHITECTS.—*Dec.* 18.—W. Tite, Esq. V.P. in the chair.—A communication was read from Mr. Ferrey, on Mr. Sylvester's process for rendering brick and porous stone impervious to wet; stating several instances in which it had been used with success. One case was that of a building on the sea-coast, almost uninhabitable from the water which drove through the walls during storms from the south-west, but which was rendered by this process perfectly dry. In another instance, an experiment had been made upon a cistern of Reigate stone, which had served its purpose for three years, without leaking. With regard to the cost of applying the process, the expense upon a large building, with a frontage of 100 feet, did not exceed 45*s.* The process in question was explained at the Institute by Mr. Sylvester during the last session, but it may be useful to repeat, that it consists of washing the brick or stone with a hot solution of three-quarters of a pound of mottled soap in a gallon of water, laid even with a large brush. This wash, after the space of twenty-four hours, is followed by a second, composed of half a pound of alum, thoroughly dissolved in four gallons of water. These materials are found to penetrate deeply into the wall, and to leave on the surface a thin scaly integument, causing no discoloration, and in fact imperceptible, except on a close inspection. Whether its effects are absolutely permanent, there has not yet been experience to show, but its renewal is so easy that the doubt can be no objection to its use.

Mr. Maugham gave some further explanation of Payne's Process for preserving Timber from Dry Rot, which was also brought before the Institute during the last session.

SOCIETY OF ARTS.—*Dec.* 6.—W. Tooke, Esq., V.P., in the chair.—W. A. Graham and J. Kymer, Esqs., were elected members. In consequence of the illness of B. Rotch, Esq., V.P., the subjects intended for illustration were postponed. Mr. Horsman Solly explained, by means of models, a variety of locks, including the Arab lock of wood, supposed to have been found in one of the Pyramids of Egypt.—Mr. Varley exhibited a specimen of wheat straw, taken from a truss which had been purchased by him, from which he had gleaned nearly as much wheat as would pay for the whole truss of straw. This, he said, he was convinced was frequently the case, and he attributed it to the imperfect mode of threshing, as generally adopted, although so many excellent machines exist.

Dec. 13.—B. B. Cabbell, Esq., V.P., in the chair.—The Secretary read a paper on Mr. Johnston's plan of forming a fixed breakwater, 'On Shipwrecks.'—The plan is as follows: a series of distinct and separate caissons—each representing in external form one half of the pier of a bridge, with its cutwater presented to the sea—is to be formed in four to six fathoms water, according to localities. Each caisson to consist of cast-iron plates of large size, and one inch in thickness (prepared with coal-tar, so as to resist corrosion), bolted together by means of four-inch flanges; the whole to be filled with concrete, granite, or other suitable material. The lower part of each caisson, to the height of thirty-two feet, having a foundation platform of wood, to be completed on shore, and when prepared, to be launched, and towed out to its position, and then lowered; the whole to be secured to the bed of the sea by means of cast-iron piles, driven through tubes of the same material.—As the upper part of the caisson is put together, so is the interior to be filled up with the solid materials, and to be coped with clamped masonry. The weight of each caisson, complete, would be 4,500 tons; and the cost of a breakwater on this principle, extending to nearly a mile in length, is estimated at 297,800*l.*

The Secretary next read a paper, by Mr. Claudet, 'On the Daguerréotype Art,' including a complete history of its origin and progress; one of Mr. Claudet's assistants showing, by means of artificial light, the whole process of producing a picture. The most important part of this communication related to an improvement lately applied; it is a process of engraving on a metallic plate. M. Fizeau, who has effected one of the greatest improvements in the Daguerréotype, namely, the fixing of the image, is the discoverer of this new mode of engraving. Professor Grove has tried the process, which consists in dissolving, by the electrotype process, those parts of the picture which consist of pure silver. Thus the plate is etched in, and transformed into an engraved plate for printing; the action, however, of the galvanic battery sometimes extends to those parts which should remain unattacked.

Dec. 20.—W. H. Hughes, Esq. V.P. in the chair.—A. H. Simpson, S. Lewis, jun., and C. K. Dyer, Esqs., were elected members.—The Secretary explained the Automaton Calculator invented by Dr. Roth, of Paris, by which any number, either simple or compound sums, may be rapidly and accurately added together, provided the whole amount does not exceed 999,999, or 999,999*l.* 19*s.* 11¾*d.* The instrument consists of an oblong mahogany box, 15½ inches long, 2½ inches wide, and 1 inch thick, having a metal plate at top, in which are 9 semi-annular perforations, beneath which are fixed the requisite trains of wheels. Round the perforations are engraved the index figures opposite to which, in the perforations, are the teeth of corresponding wheels. Under the indexes are 9 circular holes, in which the numbers set down appear, as if written on paper or a slate. To set down any required figure, a pointer is inserted in the notch corresponding with that figure on the index, and by pressing the pointer against the left hand tooth of the notch, it is moved down to the left extremity of the annular perforation, and the figure is at once exhibited in the circular hole beneath. When the operation of adding up any amount within the range already mentioned is finished, it is requisite that 0 should be shown in each of the semi-circular holes, before another operation can be performed; this is done by pulling out a slide at the left end of the instrument, which first gives 999,999*l.* 19*s.* 11¾*d.*, and by adding ¼*d.*, the nine 0s are obtained at once.

Mr. G. A. Hughes, who has been blind for seven years, exhibited his system of Stenography.—The system consists of two dots, the one smooth and the other rough, which, with the aid of a guide line, are so arranged that all the letters of the alphabet, as also the numerals, are readily represented, merely by impressing the paper, either with the smooth end or rough end of the embossing instrument, in squares, regulated by what Mr. Hughes calls the formula, consisting of a brass frame, furnished with vertical and horizontal bars.

Mr. Taylor exhibited two Fire Escapes; and Mr. Higgs explained his improved Monochord, in which measurement has been applied to sound, and the actual relation of one tone to another, is shown on a scale of two feet.

MEETINGS FOR THE ENSUING WEEK.

FINE ARTS

NEW PUBLICATIONS.

Designs for Sepulchral Monuments. By Carl Tottie, Architect. In 25 Plates, Engraved by H. Adlard.—We cannot enter a church or a cemetery without being struck with the bad taste and poverty of invention shown in the vast majority of sepulchral memorials; from the humble head-stone to the family tomb—from the plain tablet to the costly monument—the alternatives are bald ugliness on the one hand, or ostentatious tawdriness on the other. The exceptions are so few that they do but prove the rule; and though signs of improvement appear, they are neither so numerous nor so promising as could be desired. In the great majority of cases, the setting up of a tomb or stone is left to the traders in monuments, whose books of "patterns," submitted to the friends of the deceased, leave only a choice of new deformities or hackneyed commonplaces. The designer of a tomb should possess a taste for, and some knowledge of, either architecture or sculpture: the qualifications for the "monument-maker's" craft would seem to consist in ignorance of both. Nor are the higher class of designs furnished by educated artists altogether unexceptionable; their merits are rarely more than of a negative kind, and usually those are best which least challenge remark; their merit scarcely ever amounts to more than a becoming simplicity and handsome proportions,—qualities of design not by any means to be undervalued, but at the same time the most elementary of those characteristics which go to make up a beautiful *ensemble.*

The cause of these defects appears to us to lie in the want of a proper understanding of the feelings to be addressed in memorials of the departed, and of the way to awaken those feelings: certain it is, that the smile of pity at mistaken piety, or the laugh of derision at ostentatious pride, are the emotions most frequently excited in visiting a modern cemetery.

The object of a sepulchral monument is, in the first place, to mark the spot where the remains of mortality lie buried: a mound of turf, a stone, or a cross suffices for this purpose. The name of the deceased, and the dates of his birth and death, furnish all that is necessary in ordinary cases. But grief is eloquent, and love makes survivors anxious that others should share their admiration of the lost one: hence the tomb must help to express what they feel, and to excite sympathizing emotions in others, as well as to honour the memory of the departed. And here is the difficulty: words are at command—though epitaphs are proverbially fallacious, and oftener absurd than touching—but art is at a loss for a language of form to convey significant ideas. The Christian symbol, the cross, is intelligible and appropriate only as an emblem of the faith of the deceased, but this has been narrowed by custom to a sign of the Roman Catholic creed, though its applicability to all classes of Christians is now advocated; and a beautiful and expressive symbol it is, admitting of a great variety of elegant forms and devices, and being equally pleasing to the eye, whether plain or ornamented. If it be desirable to perpetuate the features, a medallion-profile, sunk in the surface of an upright stone, is the most unobtrusive, expressive, and inexpensive mode; so much so, that we wonder it is not more frequently adopted. Then there are the engraved brasses, on which the effigy of the person "in his habit as he lived," is figured by an incised outline filled with black—quaint and lasting memorials of old fashion that are being revived with good effect. But if anything beyond a record of the person and faith of the deceased be desired, art is at a loss: the old skull and crossbones is not only ugly and unpleasing, but unmeaning, or at least superfluous, and the classical symbols of the ancients are out of place. The inverted torch would, with more significance, be supplanted by an extinguisher on a candle, and the lachrymatory by a handkerchief; the urn reminds us of the tea-table, and the sarcophagus of the cellaret under the sideboard; wreaths and garlands are become mere ornaments, and as for the fasces, the scales, and the helmet, a policeman's truncheon, a bearskin cap, and a horsehair wig, should be their substitutes. This is not a poetical age; fitting emblems are few, and not very intelligible: a flower snapped from the stalk is almost the only graceful and expressive emblem of youth and innocence. In the Kensal Green cemetery is a tomb with a dead lamb sculptured on it, which, besides looking unsightly, awakens ideas of the shambles; and we remember to have seen a dead bird which at once carries you to the poulterer's. The broken column is not so bad; but these, and all similar emblems, are anything but hopeful. The Greeks symbolized the soul by a butterfly; we, in this material age, typify the soul in a bodily form. If it were wished to express the changes the mortal part of us undergoes after death, our scientific notions might suggest a retort and receiver. Not being a poetical people, we are, therefore, incompetent either to invent or understand symbols, and it were best to avoid them altogether.

Mr. Tottie's designs for monuments consist of plans and elevations of headstones, tablets, cenotaphs, obelisks, &c., mostly of handsome proportions; and, setting aside his introduction of the conventional symbols, which are obviously inapplicable, they are in good taste. But something more in accordance with the ideas and feelings of the intelligent is a desideratum, to assist our choice of simple sepulchral memorials.

Annuals, Christmas Presents, &c.

The Architectural Annual.—It is the pleasure of the publishers to call the first volume of M. Gailhabaud's 'Ancient and Modern Architecture,' the 'Architectural Annual.' For ourselves, we should have been sorry had we done the work such injustice; it is both useful and valuable, and, in our opinion, worth all the Annuals of the season. We have heretofore, and from time to time, noticed the several Parts, as published; but may here observe that it contains plans, elevations, and details of some of the most interesting buildings in the world—from the Hindoo

Digitized by Google

temple of Elora, and the Egyptian at Ebsamboul to the Invalides at Paris, including specimens of Persian, Pelasgian, Celtic, Grecian, Roman, Italian, Byzantine, and Gothic, with descriptions by Langlois, Jomard, Raoul Rochette, Kugler, and other distinguished men, and an introduction by Mr. Donaldson.

For thus classifying *London Interiors, with their Costumes and Ceremonies*, we are ourselves responsible: but it is an Annual in its style of getting up, and in the sort of showy surface-work of its engravings, and admirably suited as a present for country cousins, and not without interest even for Londoners. It contains *fifty views*,—three in Buckingham Palace, the Throne Room, the Picture Gallery, and the Queen's Painting Room; four in St. James's Palace; the Houses of Lords and Commons, Westminster Hall, &c.; Guildhall, with the inauguration of the Lord Mayor, &c.; three of Westminster Abbey; St. Paul's, the Temple Church, the Athenæum, the Reform Club, and other works of like character and interest.

Puss in Boots, illustrated by Otto Speckter.—Otto Speckter's original Puss is an Angora of superfine fur. Mr. Haghe's copy, too, would be "tabby all over" (for explanation of which, see Walpole), if we had not Speckter's etchings to remind us that some valuable points in expression and character have been lost in the copy, and that one of the most charming designs, 'Puss Snaring the Partridges,' has been altogether omitted in Mr. Murray's edition. 'Puss and the Partridges,' 'Puss and the Woodman,' and 'Reapers and Theophilus bathing,' satisfy us that Speckter has a stronger feeling for landscape than for the human figure, in the drawing of which, though German, he does not excel; indeed, he is indebted to Mr. Haghe for some occasional improvement in this respect, whilst full justice is not done in the English edition, to the landscapes. But how does it happen that Mr. Murray, with love and knowledge of the best in Art, has taken a *copy* of these clever designs, rather than the designs themselves, which surely might have been procured, as we believe they were executed by Speckter on steel? We wish we had space to examine these designs in detail, for their merit really deserves it. They tell the story excellently well, though rather in the prose spirit of everyday life, than the poetical one of fairy and supernatural doings. The etchings are delicately finished something in the style of Ostade, and great care has been taken with the secondary parts, as much as with the important. Mr. Haghe's lithographs are also excellent in their way; and the work will be a useful auxiliary in promoting that taste for higher art in children's books, which has of late been pleasantly manifest.

Felix Summerly's Hand Book for the National Gallery. With Reminiscences of the most Celebrated Pictures by John James and W. Linnell.—By some accident, this illustrated edition escaped our observation at the time of publication, and it is only now, when clearing our shelves, that we might begin the new year with a clear conscience, that we have chanced to stumble on it. No matter, its own merits will have made it known; and all we desire is to say a word in recognition and commendation of the young artists "John James and W. Linnell." But as we have had occasion to notice the work, let us hint to Felix Summerly that he has not been quite so careful as usual, or as becomes him. Thus page 48, our only picture by J. Van Eyck is said to be "a perfect specimen of the colouring of this *old German painter*," whereas, p. 63, we are told that Van Eyck belonged to "the Flemish school"—three pages further, p. 66, the writer appears to have had some misgivings on the subject, for Van Eyck is again adduced as our sole illustrator of "*The German School*," while in the next page, 67, he falls back into the rank as a "*Flemish Artist.*"—To make the blundering complete, we are told, page 48, that the picture cost 600 guineas, while 600*l.* is the price named at page 69. These are minor matters—but carelessness is not a minor matter, and we have so often and so heartily commended Felix Summerly that we cannot allow him to escape censure when he deserves it.

Little Princes: Anecdotes of Illustrious Children of all Ages and Countries, by Mr. J. Slater, with illustrative Sketches, by J. C. Horsley.—A book that deserves approbation for itself, and a good word for its decorations, some of which are among the best we have seen from Mr. Horsley's pencil.

MUSIC AND THE DRAMA

NEW PUBLICATIONS.

Mass for Four Voices, with an Accompaniment for the Organ or Pianoforte, by Thomas Scarisbrick.—Mr. Scarisbrick has obviously studied good models, though not of the highest order, in church composition: for Mozart and Haydn, to whom he is much indebted, are only safe guides when they rise above the symphonic or operatic forms, with which their service music abounds, to emulate the high-toned solemnities of Palestrina, Bach, and Handel. Our author may be less frivolous than some other modern Catholic writers: but there are passages in his 'Gloria,' 'Benedictus,' and 'Dona' of a secular character, in which we think he would not have indulged had he been sufficiently alive to the distinction above drawn, and which we conceive to be of vital importance. A bald and mechanical imitation of the formality of the ancient masters, is not the thing desired—but without their spirituality, all Religious Art must stiffen into pedantry, or drivel away into frivolity. Mr. Scarisbrick's one or two attempts at the severe style in this Mass, are not its happiest portions. The accentuation of the Latin words, too, as in the 'Qui tollis,' is more than once awkward: still there is enough aspiration and care obvious in this Mass, to justify a good word from the critic, and to induce the writer to try again, with fair hopes of a result more satisfactory.

The *third part* of Mr. T. F. Walmisley's *Sacred Songs*, completes his first volume. As far as recollection serves us, it is not equal to its predecessors. 'Blessed are they that mourn' (in spite of a syncopation thrust in to break the ballad rhythm) is essentially little more serious in style than 'The old house at home,' or 'I am not fair, I am not gay.' There is a want of design in the setting of Keble's 'Sweet nurselings of the vernal skies.' Bishop Middleton's 'Memory' is but a slow *cavatina* for a close stage scene; while the Marquis of Wellesley's elegant translation of his own Latin poem '*Salix Babylonica*,' is as little susceptible of musical illustration, as so simply-phrased a poem can be. Didactic verse has little affinity with vocal melody and expression: nor can we fancy a place or a circumstance to which the mixture before us is adaptable.

The cause of "the million" does not gain by such aimless publications as '*Music for the Million*,' two numbers of which come next under consideration. Pandora Waltzes, and Jullien's Scotch Quadrilles, are queer companions to Arne's 'Where the bee sucks,' and Danby's 'Fair Flora,' though both song and glee are here made to "trip it merrily" by the introduction of modish accompaniments. Nor is the overture to 'Fra Diavolo,' with its drum and trumpet work, a pianoforte piece, which one pair of hands in *two* million can render effective.

The solitary instrumental publication before us, a *Rondino for the Pianoforte*, by Jules Benedict, is one of that clever composer's earlier works, in which his pupilage under Weber may be discerned by all who are familiar with the forms of that picturesque composer. The piece will be found sufficiently arduous in practice, to justify the omission of the Italian diminutive from the title: the passages being neither hackneyed nor easy. Another of Messrs. Ewer & Co.'s publications is '*The Siren*,' a series of vocal duets by German composers, with English words adapted by Mr. Bartholomew: who, let us here say, is one of our more careful adapters. The specimen before us, by Reissiger, is not peculiarly interesting,—the vocal phrases being unusually well-worn: whatever charm there is, must reside in the accompaniment. To all seductions of this kind, English singers are indolently deaf; and hence (among other causes) the partial acceptance which the songs of Schubert have met with amongst them.

To conclude—after the fashion of the theatres, with a farce—we have *Father Mathew's Quadrilles!* the great hydropathist figuring at the head of *Pantalon*, Earl Stanhope as *L'Eté*, Total Abstinence standing for *La Poule*, the Pledge being taken at *Trénise*, and the medal distributed by way of *Finale*. (N.B. No waltz permitted as in common *tipsy* sets.) The tunes are not worse than usual: but we looked in vain for one melody which ought to have figured, by way of example and encouragement on the occasion —'*The Jolly Young Waterman*'!

MISCELLANEA

The Broadway Church, Westminster. (From a Correspondent).—On Thursday last this new Church was consecrated by the Bishop of London. This edifice, built from the designs of Mr. Poynter, is of more than usual pretensions among modern gothic churches, being the first that has been built in the metropolis with stone. The exterior is faced with Kentish rag, with Bath stone quoins and dressings, and the arches and the whole of the moulded and carved work withinside are also of Bath stone. The chancel, raised by six steps above the body of the Church, forms an apsis, and is highly decorated with carving and painting, and a stained window by Willement. There is another stained window in the south aisle, forming a back-ground to the front, which is of large size, and elaborately carved. The style of the building is that of the latter part of the 13th century, and the architect has introduced cast iron columns for the support of the nave arches, not in disguise, but adapted to the characteristics of the architecture. Considering the growing use and importance of cast iron in constructive architecture, it would be well if this sort of adaptation were more studied. The west front of the building rises to the height of about 67 feet, and as the roof is of open timber work, the interior effect is strikingly lofty. It is intended to complete this building with a spire 200 feet in height, but from a deficiency of funds the tower has as yet reached little more than a fourth of this elevation.

Creta Lævis.—Preparations of drawing chalk in various colours, and some specimens of works produced by them, have been submitted to us by Messrs. Wolff & Sons. These specimens we had no hesitation in pronouncing powerful and effective; but we thought it right to forward the material itself, to one more competent than ourselves to offer an opinion, and he reports favourably of it—that it is well suited for sketching, as it enables the artist to give colour as well as outline, which does not rub off in the portfolio. Accompanying specimens of their lead pencils were less satisfactory. Those designed for the use of architects and engineers are hard enough, but want depth of colour; and the common pencil is as good, perhaps better, than those commonly met with; but that is no great praise, for it is next to impossible to get a good common pencil.

Patent Fire Escape.—A Mr. Thompson has invented what he calls a *Domestic Safety Belt*, for the protection of life from fire. The machine was exhibited opposite our office in Wellington-street, and appeared to be simple, ingenious, and likely to be practically useful. It is proposed to affix the escape outside a house, so that it may be immediately available for a whole neighbourhood, and as the cost is only 1*l.* 5*s.* 6*d.*, it is to be the property of those inhabitants who pay one shilling towards the expense of erecting it. It is contained in a box five feet four inches high, seventeen inches wide, and six feet in depth, which contains nine poles, sufficient to reach forty feet, and fifty yards of rope and the weft belt, which will bear half a ton in weight. A man, it is said, can take the escape from the box, raise the cord forty feet from the ground, fix it, ascend, and descend with a person in his arms in one minute—certainly in a very short time, as we had an opportunity of observing.

Twelfth-Night Characters.—These have been selected from the plays of Shakspeare, and designed and drawn on stone by Mr. Alpenny, in the hope that while they offer abundant materials for mirth, they will be free from coarseness and vulgarity. The idea was a good one—so good that we wish the execution had been better.

A merry Christmas to you.—Mr. Felix Summerly welcomes his young friends on their return for the holydays. He has accordingly just issued a fanciful, or rather festival card, wherein they are pleasantly reminded, not only of the pleasures, but of the duties of the season. It represents, in a central picture, a merry family, age and youth together, enjoying the festivities of Christmas, while the pretty frame-work in which the picture is set suggests the charities that should not be forgotten.

To CORRESPONDENTS.—J. E. H.—J. P. B.—received.

We have stated twenty times, at least, that correspondents who forward us information should send, in confidence, their names and addresses. If they do not, we cannot notice their communications.

Court Journal.

Henry Colburn, Publisher, 13, Great Marlborough-street.

HOOD'S MAGAZINE.

ON THE FIRST OF JANUARY, 1844.

Price 2s. 6d.

HOOD'S MONTHLY MAGAZINE

AND

COMIC MISCELLANY.

Whatever may be thought of Dr. Dickson's theory, that the type of Disease in general is periodical, there can be no doubt of its applicability to Modern Literature, which is essentially Periodical, whether the type be long primer, brevier, or bourgeois. It appears, moreover, by the rapid consumption of Monthlies, compared with the decline of the Annuals, that frequent fits of publication are more prevalent and popular than yearly paroxysms.

Under these circumstances, no apology is necessary for the present undertaking; but Custom, which exacts an Overture to a new Opera, and a Prologue to a new Play, requires a few words of Introduction to a new Monthly Magazine.

One prominent object, then, of the projected Publication, as implied by the sub-title of "Comic Miscellany," will be the supply of harmless "Mirth for the Million," and light thoughts, to a Public sorely oppressed—if its word be worth a rush, or its complaints of an ounce weight—by hard times, heavy taxes, and those "eating cares" which attend on the securing of food for the day, as well as a provision for the future. For the relief of such afflicted classes, the Editor, assisted by able Humourists, will dispense a series of papers and woodcuts, which it is hoped will cheer the gloom of Willow Walk, and the loneliness of Wilderness Row—sweeten the bitterness of Camomile Street, and Wormwood Street—smoothe the ruffled temper of Cross Street, and enable even Crooked Lane to unbend itself! It is hardly necessary to promise that this end will be pursued without raising a Maiden Blush, much less a Damask, in the nursery grounds of modesty—or trespassing, by wanton personalities, on the parks and lawns of Private Life. In a word, it will aim at being merry and wise, instead of merry and otherwise.

For the Sedate, there will be papers of a becoming gravity; and the lover of Poetry will be supplied with numbers in each Number.

As to Politics, the Reader of HOOD'S MAGAZINE will vainly search in its pages for a Panacea for Agricultural Distress, or a Grand Catholicon for Irish Agitation; he will uselessly seek to know whether we ought to depend for our bread on foreign farmers, or merely on foreign sea-fowl; or if the Repeal of the Union would produce low rents, and only three quarter days. Neither must he hope to learn the proper Terminus of Reform, nor even whether a Finality man means Campbell's Last Man, or an Undertaker.

A total abstinence from such stimulating topics and fermented questions is, indeed, ensured by the established character of the Editor, and his notorious aversion to party spirit. To borrow his own words, from a letter to the Proprietors—"I am no Politician, and far from instructed on those topics which, to parody a common phrase, no gentleman's newspaper should be without. Thus, for any knowledge of mine, the Irish Prosecutions may be for pirating the Irish Melodies; the Pennsylvanians may have repudiated their wives; Duff Green may be a place, like Goose Green; Prince Polignac a dahlia or a carnation, and the Duc de Bordeaux a tulip. The Spanish affairs I could never master, even with a *Pronouncing* Dictionary at my elbow; it would puzzle me to say whether Queen Isabella's majority is or is not equal to Sir Robert Peel's; or if the shelling the Barcelonese was done with bombs and mortars, or the nutcrackers. Prim may be a quaker, and the whole Civil War about the Seville Oranges. Nay, even on domestic matters nearer home, my profound political ignorance leaves me in doubt on questions concerning which the newsmen's boys and printers' devils have formed very decided opinions; for example, whether the Corn Law League ought to extend beyond three miles from Mark Lane—or the Silding Scale should regulate the charges at the Glaciarium; what share the Welch Whigs have had in the Welch Riots, and how far the Ryots in India were excited by the slaughter of the Brahmin Bull. On all such public subjects I am less *au fait* than that Publicist the Potboy, at the public-house, with the Insolvent sign, The Hog in the Pound."

Polemics will be excluded with the same rigour: and especially the Tractarian Schism. The reader of HOOD'S MAGAZINE must not hope, therefore, to be told whether an old Protestant Church ought to be plastered with Roman Cement; or, if a design for a new one should be washed in with Newman's colours. And most egregiously will he be disappointed, should he look for Controversial Theology in our Poet's Corner. He might as well expect to see Queens of Sheba, and divided babies, from wearing Solomon's Spectacles!

For the rest, a critical eye will be kept on our current Literature,—a regretful one on the Drama, and a kind one for the Fine Arts, from whose Artesian Well there will be an occasional *drawing*.

With this brief, explanatory Announcement, HOOD'S MAGAZINE AND COMIC MISCELLANY is left to recommend itself by its own merits to those enlightened judges, the Reviewers; and to that impartial jury—too vast to pack in any case—the British Public.

*** Office, No. 1, Adam-street, Adelphi, where all Orders, Advertisements, and Communications for the Editor, are requested to be addressed.

In a few days will be published, in royal 18mo. price 4s. elegantly bound in cloth,

GRISELDA: A DRAMATIC POEM, translated from the German of FREDERICK HALM.

London: Smith, Elder & Co. 65, Cornhill.

THE PENNY MAGAZINE, Vol. XII. (being the Third of the New Series), handsomely bound in cloth, price 7s. 6d.

THE PICTORIAL MUSEUM of ANIMATED NATURE, comprising MAMMALIA and BIRDS, Vol. I., elegantly bound in cloth, with a fac-simile Coloured Frontispiece from a drawing by T. Landseer, price 16s. 6d.

THE PENNY CYCLOPÆDIA, Vol. XXVII. being the concluding Volume of the Work, in cloth boards, price 10s. 6d.

RE-ISSUE IN MONTHLY VOLUMES, OR SECTIONS, OF COMPLETED WORKS.

On the 1st January, 1844, these Works will commence to be reissued in Monthly Volumes, or Sections, so as to enable new Subscribers, with a very moderate periodical outlay, to become possessed, within a short period, of books which are universally acknowledged to be the best foundation of a private library. All the doubts of their proper completion, which too often apply to large periodical works, are now set at rest.

The Monthly Re-issue will be as follows, all the Volumes or Sections being strongly and elegantly sewed in a novel style:—

THE PENNY CYCLOPÆDIA. A Monthly Volume, at Six Shillings. Completed, in 27 Volumes, in March, 1846.

THE PENNY MAGAZINE. 1st Series. A Monthly Volume, at Four Shillings. Completed, in 9 Volumes, in October, 1844.

THE PICTORIAL BIBLE, and the HISTORY OF THE JEWS (including the Natural History of the Holy Land). A Monthly Section, including a portion of each Work, at Six Shillings. Completed, in 12 Monthly Parts, in December, 1844.

THE PICTORIAL EDITION OF SHAKSPERE, including the Biography. A Monthly Section, at Six Shillings. Completed, in 21 Monthly Parts, in September, 1845.

THE PICTORIAL HISTORY OF ENGLAND, to the conclusion of the reign of George II. A Monthly Section, at Six Shillings. Completed, in 15 Monthly Parts, in March, 1845.

THE PICTORIAL HISTORY OF ENGLAND, during the reign of George III. A Monthly Section, at Six Shillings. Completed, in 12 Monthly Parts, in December, 1844.

22, Ludgate-street, December 20, 1843.

DODD'S PEERAGE, BARONETAGE, AND KNIGHTAGE, For 1844 (Fourth Year).
On the 19th inst., new edition, revised from the first article to the last, fcap. 8vo. 9s. cloth,
A PEERAGE, BARONETAGE, and KNIGHTAGE of GREAT BRITAIN and IRELAND, including the Junior Branches of the Nobility and all the Titled Classes alphabetically arranged, and containing, in addition to the usual contents of a peerage, knights, bishops, judges, privy councillors, &c. By C. R. DODD, Esq., Author of 'Parliamentary Companion,' &c.
*** Since the last edition, the occurrence of 421 deaths, 203 new creations, 156 marriages, together with the mass of promotions attendant on the Chinese and Affghan wars, have rendered an entire revision of the work necessary from the first article to the last.
Whittaker & Co. Ave Maria-lane.

NEW AND IMPORTANT WORK ON IRELAND.
Second Edition, in 1 vol. nearly ready, price 10s. 6d. cloth,
IRELAND AND ITS RULERS SINCE 1829.
"This is a dashing, broad, and leader-looking series of articles upon Irish affairs. The style and manner are those of a popular *writer*. He reminds one of our *Edinburgh Reviewers*; though he has more nerve and less conventional verbiage than the modern Edinburgh contributors."—*Spectator*.
"This is a work likely to be popular, for it deals with persons and things which engross public attention, and deals with them in a lively, spirited, and amusing manner."—*John Bull*.
"The work is clever and lively. The author sees clearly enough the existing state of society, and possesses considerable skill in depicting it."—*Examiner*.
"We are unable to conjecture who the author may be, but he has clearly been no inactive spectator of the scenes which he describes; his acquaintance with the political movements is far too intimate to have been acquired in front of the curtain—he has been behind the scenes and shared in settling the cast of the drama, if he has not appeared on the stage as an actor."—*Athenæum*.
"More truth about Ireland, a nicer discrimination, a more intimate acquaintance with men and things, fewer theories and more facts than in almost any volume of the same size that we ever happened to take up."—*Chronicle*.
T. C. Newby, 65, Mortimer-street, Cavendish-square.

Now publishing, at intervals of Four Months, in cloth boards, small 8vo. price 3s. 6d. each,
SMALL BOOKS on GREAT SUBJECTS. Edited by SOME WELL-WISHERS to KNOWLEDGE.

Surgeon—Samuel Solly, Esq., F.R.S. 1, St. Helen's Place.
Standing Counsel—Charles Ellis, Esq.
Solicitors—Messrs. Hale, Boys, and Austen.
Bankers—Bank of England.
Actuary—J. M. Rainbow, Esq.

THE ADVANTAGES OF THIS OFFICE, among others, are:
1. A participation septennially in two-thirds of the Profits, which may be applied either in reduction of the Premium, or to augment the sum assured.
The following Bonuses have been assigned to all Policies, of at least three years' standing, effected for the whole duration of Life:—
First Division, in 1832.
From 18s. to 2l. 12s. per Cent. per Annum on the sums assured, varying with the age, being equivalent, on the average, to 26½ per cent. on the Premiums paid.
Second Division, in 1839.
From upwards of 1l. to upwards of 3l. per Cent. per Annum on the sums assured, or on the average, 33 per Cent. on the Premiums paid for the preceding Seven Years.
2. Premiums may be paid in a limited number of annual sums, instead of by annual Payments for the whole of life; the Policy continuing to participate in profits after the payment of such premiums has ceased.
3. The Assurance or Premium Fund is not subject to any charge for Interest to Proprietors.
4. Permission to pass to Continental Ports between *Brest* and the *Elbe* inclusive.
5. Parties (including Officers of the Army, Navy, East India Company, and Merchant Service,) may be assured to reside in or proceed to all parts of the World, at Premiums calculated on real data.
6. Claims to be paid within three months.
7. The Assured may dispose of their Policies to the Company.
8. No charge but for Police Stamps.
The Prospectus, Tables of Rates, &c. to be had at the Office in London, or of the Company's Agents.
T. G. CONYERS, *Secretary.*

DISEASED AND HEALTHY LIVES ASSURED.

MEDICAL, INVALID, and GENERAL LIFE OFFICE, 25, Pall Mall, London. Capital 500,000*l.* This Office is provided with very accurately constructed Tables, by which it can Assure Diseased Lives on Equitable Terms. Increased Annuities granted on *unsound* Lives, the amount varying with the particular disease. Members of Consumptive Families assured at Equitable Rates. Loans granted upon personal security. F. G. P. NEISON, Actuary.

Charles Mayhew, Esq.	John White, Esq.

Auditors.

John Chas. Burgoyne, Esq.	James Tilbury, Esq.
The Rev. Geo. Fisher, F.R.S.	John Walls, Esq.

Physician—Charles J. Roberts, M.D., 31, New Bridge-street, Blackfriars.
Surgeon—James M. Arnott, Esq. 2, New Burlington-street.
Solicitor—Thomas Burgoyne, Esq. 160, Oxford-street.
Bankers—Messrs. Cocks, Biddulph & Co. 43, Charing-cross.

A DIVIDEND OF THE PROFITS OF THIS SOCIETY WAS DECLARED ON THE 1ST JANUARY, 1842, by which an addition, amounting on the average to 45 PER CENT. on the Premiums received, was made to all Policies entitled to share therein.
FOUR-FIFTHS, or 80 PER CENT. of the total profits, are divided among the Assured at intervals of five years; and all Policies on which two payments have been made, participate in the division.
The Profits respectively allotted may be received by the Assured in present money, by a reduction of the Annual Premium, or by adding to the Policy an equivalent reversionary sum.
All Persons Assured on their own lives for 1,000*l.* or upwards, have the right (after two Annual payments) to attend and vote at the General Meetings of the Society.
W. M. BROWNE, Actuary.

CORPORATION OF THE LONDON ASSURANCE,
Established by Royal Charter, A.D. 1720.
Offices, 19, Birchin-lane, Cornhill, and 10, Regent-street.
NOTICE is hereby given to all persons who have paid to this Corporation five years' premium on assurances effected on lives under the plan entitling the assured to a reduction of premium, commenced in 1831, and of which the details are already before the public, that on the 1st of January, 1844, when their next annual premium will become due, they will be entitled to an abatement of 21*l.* 1*s.* 11*d.* per cent. thereon.
Fire assurances may be effected with this Corporation at the most moderate rates.
Marine assurances may be made with this Corporation at the current premiums of the day.
Attendance daily, from 10 till 4, at both Offices, where prospectuses and every information may be obtained.
JOHN LAURENCE, Sec.

METCALFE'S NEW PATTERN TOOTH BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose.—1*s.* An improved Clothes Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-brushes, with the durable unbleached Russian bristles, which do not soften like common hair. Flesh Brushes, of improved graduated and powerful friction. Velvet brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, 130, B., Oxford-street, one door from Holles-street.
Caution—Beware of the words "From Metcalfe's," adopted by some houses.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles are greatly improved, and do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 21½, Bread-street, City; and at the Manufactory, Old Bargehouse, Christchurch, Surrey.

STONE-COLOURED CEMENT.

FELIX AUSTIN, of the New Road, Regent's Park, begs to inform Architects, Builders, Plasterers, &c. that during the process of manufacturing a very superior composition which has greatly improved his well-known Artificial Stone Ornaments, he has succeeded in making an excellent STONE-COLOURED CEMENT, adapted to building, more especially for facing brick walls and repairing decayed stone work, which he can supply at 2*s.* 6*d.* per bushel, at his Manufactory, near the Thames Tunnel, Rotherhithe.

A. M. PERKINS'S PATENT HOT-WATER APPARATUS, FOR WARMING AND VENTILATING.

FOR the successful operation of the above Plan, references may be made to the British Museum, the Chapels Royal, Whitehall and St. James's, Marlborough House, and Whitley Court, the residences of Her Majesty the Queen Dowager, his Grace the Archbishop of Canterbury's Palaces at Lambeth and Addington; his Grace the Duke of Beaufort's at Badminton; his Grace the Duke of Wellington's at Strathfieldsaye; his Grace the Duke of Hamilton's Palace at Hamilton; the Lord Chancellor's and Vice-Chancellor's Courts at Westminster and Lincoln's Inn; the Insolvent Debtors Court; the Old Bailey Sessions House; School of Design and Tithe Commissioners' Offices, Somerset House; Register of Designs and Record-office; Lincoln's-inn and Gray's-inn Chapels; Inner Temple Hall; County Fire Office; Register Office and Justiciary Courts, Edinburgh; Charles Babbage's, Esq. Dorset-street, Manchester-square; and many other Private Residences, Public Buildings, Churches, Hospitals, Lunatic Asylums, Union Poor Houses, Prisons, Hothouses, Conservatories, &c. &c.
Manufactory, No. 6, Francis-street, Gray's-inn-road.

LEA & PERRIN'S 'WORCESTERSHIRE SAUCE.' Prepared from the Recipe of a Nobleman in the County.—The above celebrated Sauce has, from the time of its introduction, been steadily progressing in public favour. Its peculiar piquancy, combined with exquisite flavour, establish it of a character unequalled in sauces. Noblemen and others, of acknowledged gout, pronounce it to be 'the only good sauce;' and for enriching gravies, or as a zest for fish, curries, steaks, game, cold meat, &c., especially unrivalled. As a rapidly-increasing inquiry is now made for it in all parts of the kingdom, the Proprietors beg to state that druggists, grocers, and others may be supplied by their agents—Messrs. Barclay & Sons, Farringdon-street; Mr. J. Harding, 59, King-street, Stepney; Messrs. Metcalfe & Co. 16, Southampton-row; and by the Wholesale Oil and Italian Warehousemen in London, upon the same terms as at their Warehouse at Worcester.—Sold retail, in half-pint bottles, at 1*s.* 6*d.*; pints, 2*s.* 6*d.*; and quarts, 5*s.* each, with the Proprietors' stamp over the cork of every bottle.

WOLFF & SON'S CRETA LÆVIS, or PERMANENT DRAWING CHALK, in various Colours.
E. Wolff & Son beg to apprise Artists and Amateurs that they have, by the introduction of great improvements in their CRETA LÆVIS, enabled it to be used the same as the ordinary pencil; and effects can now be produced equal to water-colour drawings, without the use of water or any other fluid, the various colours blending together with perfect harmony, beauty, and richness. It can be cut to a fine point, and is thus capable of giving a very delicate outline. For sketching from nature, the great advantages resulting from the adoption of the CRETA LÆVIS must be obvious, as without the use of water, palette, brushes, &c. all the various tints can be obtained with a truthfulness that cannot be surpassed,—thus superseding every other method in general use. The drawings may be carried in a portfolio with safety, as, unlike other crayons, they will neither rub off, nor suffer injury by coming in contact with the usual contents of a portfolio. The CRETA LÆVIS will not be affected by heat or change of climate. Specimens may be seen at the Polytechnic Institution, Regent-street; Royal Adelaide Gallery, Strand; and all respectable Stationers, where the CRETA LÆVIS may be had in sets of twelve, eighteen, twenty-four, and thirty-six, with or without boxes.
Instructions for Use.—In order to produce the delicate shades, the chalk must be cut to a fine point, and worked very lightly on the paper, blending the colours until the required tint be obtained. The deep shades merely require a broader point and increased pressure.—Bristol Board, Crayon Paper, or, in fact, any papers with a fine even surface, but not glazed, are well adapted for the CRETA LÆVIS.
Wolff & Son beg to recommend their newly-invented SKETCHING PENCILS, or Permanent Black Chalks:—B B, very black, for foreground; H B, middle tint; N, neutral tint for distance. These Pencils are peculiarly adapted for sketching heads and landscapes, and are capable of producing a beautiful effect with very little labour. Having an adhesive quality, the drawings may be transmitted without fear of injury.
The method of using the CRETA LÆVIS is taught by Mr. W. H. Kearney, Member of the New Water-Colour Society.
*** Wolff & Son are desirous of opening an Agency with respectable Country Booksellers and Stationers for the sale of the above.—Manufactory, 23, Church-street, Spitalfields, London.

Athenæum, Dec. 16th, 1843.

Price 25*s.* elegant, in cloth,

WILLIAM SHAKSPERE: A BIOGRAPHY.

By CHARLES KNIGHT.

This, which is the Introductory Volume to the Pictorial Edition of Shakspere, forms a distinct work, exhibiting our great Poet in association with the circumstances of his domestic position, and portraying the Literature, Manners, and events of his Age. The subject includes a full HISTORY OF THE STAGE. The volume contains above 200 Woodcuts, from designs by Harvey.

"The volume now before us is, in many respects, the most interesting of the series. It is the most elaborate life of Shakspere in the English language, or indeed in any language. The breadth of the plan on which it is constructed demanded a corresponding breadth of dimensions. It is a narrative of the few facts that are certainly known in regard to the poet's life—a statement of the disputed questions in regard to many other points in his history—and a picture of those circumstances in the contemporary state of society and manners which exercised an influence upon his character and writings. In the discharge of the duty thus undertaken, Mr. Knight has evinced equal talent in writing and knowledge of early English literature and antiquities; and the result of his researches is presented in a shape which his enthusiastic appreciation of the imaginative features of his theme, and his acute and comprehensive grasp of its argumentative topics, concur in rendering highly attractive."—*Scotsman.*

*** The PICTORIAL EDITION of SHAKSPERE, including the Biography, is complete in Eight Volumes, price Seven Guineas in cloth; half-bound in morocco or russia, gilt tops or marbled edges, lettered contents, Eight Guineas; in calf, marbled edges, lettered contents, Eight Guineas and a Half; or in morocco or russia, gilt edges, lettered contents, Ten Pounds.

23. A Day at a Copper and Lead Factory.

THE PICTORIAL MUSEUM of ANIMATED NATURE.

Volume I., containing QUADRUPEDS and BIRDS; splendidly bound in elegantly gilt cloth, price 16*s.* 6*d.*

This work, which will be completed in Two Volumes, has obtained the greatest sale and the most extensive popularity. The number and beauty of its Wood-engravings render it unrivalled in its attractions. The reader, at the very smallest price, is put into possession of by far the most extensive collection that has ever been produced of pictorial representations, executed with scientific accuracy, of all the important Quadrupeds, Birds, Fishes, Reptiles, and Insects, which fill the earth. He opens the volume, and he finds on one page ten, twelve, or fifteen figures of the various Genera and Species, with occasional cuts of portions of their structure, and of their economy; he is impressed with the beauty and variety of these engravings, and he dwells, like the visitor to a Museum, upon their curious forms and their picturesque attitudes. He turns to a following page, and he has there a corresponding description of the animal, its structure, its habits, its localities, its use,—not given in a dry and repulsive form, but with that simplicity which may furnish just conceptions to all, but especially to the young, of the wonders and beauties of God's Creation. It is impossible not to believe that a work so useful in its designs, and so unequalled in the extent of its Illustrations, will find its way into every family; for assuredly nothing can be presented more adapted for the gratification of a rational desire for knowledge, and for advancing the best objects of education, especially of domestic education.

BRAND'S POPULAR ANTIQUITIES. A New Edition, in

3 vols. with Forty-eight Woodcut Illustrations. By SIR HENRY ELLIS, Sec. F.A.S. Principal Librarian of the British Museum. Price 15*s.* in cloth, gilt edges.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 844. LONDON, SATURDAY, DECEMBER 30, 1843. PRICE FOURPENCE (Stamped Edition, 5d.)

For the convenience of Subscribers [illegible] for the Continent, for not less than Three [illegible] the postage to be paid in London, 28fr. or 1l. 2s. the year. To other Countries, the postage in addition.

Weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition [illegible] ace, are received by M. Baudry, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring [JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

HANWELL COLLEGIATE SCHOOL, Middlesex. Principal, the Rev. J. A. EMERTON, M.A., Curate of Hanwell, Middlesex.—Parents and Guardians desirous of selecting a School in a healthy situation, combining the intellectual advantages of a Collegiate Course with Religious Instruction, Moral Training, and Domestic Care, may obtain Prospectuses on application to the Rev. Dr. Walmsley, Rectory, Hanwell; J. D. Macbride, Esq., D.C.L., Principal of Magdalene Hall, Oxford; or of the Principal, at the School.

LADIES' SCHOOL, CLAPTON.—MISS SMITH and MISS SEYB (Successors to Mrs. Lalor and Miss Banks).—Miss Smith and Miss Seyb beg to submit the following statement of the objects aimed at in their plans of education. The first is the formation of Moral and Religious Character, by a system of treatment, addressed to the reason and the higher feelings, in which it is attempted to combine the regularity of a school with the affections and sympathies of a family. The growth of moral habits is promoted by leading the pupils to reflect on the Right and Wrong of the questions to which the events of their daily life give rise, and by adopting motives of action to the peculiarities of individual character. In addition to the religious instruction, strictly so-called, a religious character is given, as far as possible to other studies, by turning attention to the proofs of the Divine wisdom and goodness which they furnish. In Intellectual Education, the aim is to unfold the faculties of Observation, Reasoning, Taste, &c. and the acquisition of knowledge is made subservient to this end. With the same view, a gradual method of developement, conducted without the stimulus of competition, is preferred to any more striking but less safe process. The mode of teaching by real objects is adopted, and such other modern improvements as have been tested by experience. The course of instruction embraces the usual subjects, and peculiar advantages are offered in the acquisition of languages, Miss Seyb being a German Protestant, and speaking *fluently*, French, and Italian, as well as English. The accomplishments, which impart so much grace and enjoyment to social life, are assiduously cultivated, but are not permitted to absorb attention to the exclusion of more solid attainments. Unremitting care is bestowed upon all that concerns the Health of the pupils, and exercises calculated to give strength and gracefulness, and preserve the form from distortion, are adapted to the age and constitution of each.

5, Clapton-square.

ASSOCIATION for the PROMOTION OF THE FINE ARTS IN SCOTLAND.
Founded in 1833.

Committee of Management for the year 1843-4.

The Rt. Hon. the Earl of Stair.	The Hon. Lord Jeffrey.
Alex. Macanochie, Esq.	Sir John M'Neill, G.C.B.
Professor Wilson.	Professor Trail.
Thomas Maitland, Esq., of Dundrennan.	George Moir, Esq., Advocate.
Dr. Monro.	Alexander Allan, Esq.
J. T. Gordon, Esq., Advocate.	Dr. Maclagan.
Professor Spalding.	Macduff Rhind, Esq., Advocate

J. A. BELL, Esq., Architect, Secretary, and Treasurer.

Honorary Secretaries for London.

T. Marsh Nelson, Esq., Architect, 3, Charles-street, St. James's-square.
Messrs. Smith, Elder, & Co. Booksellers, Cornhill.
John Leslie, Esq., Bookseller, 59, Great Queen-street, Lincoln's Inn-Fields.

The object of this Association is to advance the cause of Art in Scotland, by affording additional encouragement to its professors, in the following way:

A Subscriber of One Guinea becomes a Member for one year, has a chance of gaining a Valuable Work of Art, and the certainty of receiving a Valuable Engraving.

An Annual General Meeting of Members is held in May for the purpose of electing a Committee of Management, who are intrusted with power for one year, to purchase what may appear to them the most deserving Works of Scottish Art Annually Exhibited. At this Meeting, likewise, the different Works purchased for the Association become, by Lots publicly drawn, the property of individual Members.

Lord Jeffrey has said, in allusion to the Association, "That the great aim of the Members of this Society was to advance a taste for Art, and to extend the fame and honour of Artists; and that, to a great degree they had accomplished both these objects, by diffusing a taste for Art among the Scottish public, and by raising a higher standard of excellence among Artists themselves."

Cordially agreeing with these sentiments, the Committee take this opportunity of earnestly requesting the attention of all those who have not yet enrolled themselves as Members of the Association, to its great importance and usefulness as a National Institution.

It is confidently anticipated that the Paintings and Sculpture which the Committee may be enabled to purchase, will be numerous and valuable; and they will, as usual, be distributed among the Members at the Annual General Meeting in May, each person receiving one chance for every Guinea subscribed.

Members for the year 1843-44, will be entitled to copies of a Line Engraving now being executed by Mr. L. Stocks, after Mr. Robert Scott Lauder's beautiful picture of 'THE GLEE MAIDEN.' This charming Engraving is already far and skilfully advanced; it is of dimensions larger than those of any plate which has yet been distributed, and is in every respect worthy of the beauty of the painting. When completed, every copy of this Engraving will certainly be worth more than the usual Annual Subscription of One Guinea.

The Members for last year, 1842-43, will receive in the course of this month, copies of the Engraving executed by Mr. William Millar, after Mr. Lauder's Painting of 'ITALIAN GOATHERDS ENTERTAINING A BROTHER OF THE SANTISSIMA TRINITA.' An impression from this Plate may be seen on application to any of the Local Honorary Secretaries.

Subscribers' names will continue to be received till April, 1844.

Upon application to the Secretary, 69, York-place, Edinburgh, or to any of the Local Honorary Secretaries throughout the country, reports and information may be obtained and subscriptions paid.

Edinburgh, December, 1843.

TO SOCIETIES—LITERARY, RELIGIOUS, or SCIENTIFIC.—The GRATUITOUS Use of a spacious MEETING or COMMITTEE-ROOM, appropriately furnished, may be had in a leading West End street, by any respectable Association who may have employment for a Printer.—Apply, by letter, stating particulars, to A. B., 6, Cook's-court, Carey-street.

BRITISH AND FOREIGN INSTITUTE.
President,
THE RIGHT HONOURABLE THE EARL OF DEVON.

Nine Hundred Members being now enrolled, the Institute will be opened on the 15th of January next (the requisite airing and drying of the newly-fitted Rooms making it unsafe to open earlier), and all Candidates admitted before the completion of One Thousand, will be received on the present terms:

Town Members....Entrance, £8 8 0....Annual, £4 4 0
Country Members..Entrance, 4 4 0....Annual, 1 11 6

with diminished proportionate rates for Ladies and Families; but after the completion of One Thousand Members, the terms will be increased.

The First Lecture of the Season will be given in the Hanover Square Rooms, on Wednesday, the 7th of February; and the First Soirée of the Season will be given in the Drawing-Rooms of the Institute, No. 13, George-street, Hanover-square, on Thursday, the 15th of February, each to commence at half-past Eight.

Copies of the Prospectus and Code of Rules, with Cards for the introduction of Candidates, may be had *gratis*, at the Hanover Square Rooms, from ten till five o'clock daily, and personal or written applications will receive immediate attention from the undersigned.

JAMES S. BUCKINGHAM, Resident Director.

December 18, 1843.

Mr. Buckingham's Inaugural Lecture, as delivered before the Members at their First Evening Meeting, the Earl of Devon in the Chair, contains the fullest details of the plan and objects of the Institute. A Second and Enlarged Edition of this, containing the latest List of its Members, is now in the press, and may be ordered through any Bookseller. Price 1*s.* 6*d.* stitched, and 2*s.* 6*d.* bound in cloth, gilt.

FRESCO AND ENCAUSTIC ORNAMENTAL PAINTING.

MR. FREDERICK SANG, Artist, from the Royal Academy at Munich, begs to inform the Nobility and Gentry (Architects particularly), that he continues, with a considerable number of his Pupils, to decorate Public and Private Buildings in the above manner, and in the different ancient and modern styles, on reasonable terms, and with the greatest dispatch. Orders executed in all parts of the United Kingdom.—Apply by letter to Mr. Frk. Sang, 27, Portland-terrace, Regent's-park, London.

ARCHITECTURAL DECORATION.—ARTICLED PUPIL.—An ARCHITECT, whose studies for several years were pursued on the Continent, and who has relinquished his practice in favour of the Decorative Arts, (chiefly in the Arabesque Decorations, in Encaustic, Fresco, &c., so prevalent on the Continent, and now getting so generally introduced in this country,) has at present a VACANCY for an ARTICLED PUPIL; and can afford an advantageous opportunity to a youth of taste, already possessing the rudiments of drawing, to acquire a superior knowledge of those branches of the Architectural Profession more immediately connected with the Fine Arts.—Address to A. B., Mr. Tatham's, Charing-cross.

NEWSPAPER OFFICE, 11, Serle-street, Lincoln's-inn, London.—GEORGE H. STREET, General Newspaper and Advertising Agent, begs to inform the public that he SUPPLIES the *Athenæum*, and all the other LONDON NEWSPAPERS, to all parts of the Kingdom and Her Majesty's Colonies, free of postage; by the morning mails to those places for which the Post Office make up bags, at the marked price of each paper.—Advertisements received for all the London and Country Journals.

NEWSPAPER and ADVERTISING OFFICE, 74, Cannon-street, City, London: established 1809.—W. DAWSON & SON, Agents for the *Athenæum*, respectfully inform their friends that they SUPPLY that and all the other LONDON NEWSPAPERS, with the greatest punctuality, to every part of the United Kingdom, France, Spain, and most of the British Colonies, by both the morning and evening mails.

HANDSOME and NOVEL CHRISTMAS and NEW YEAR'S GIFTS.—THE ILLUSTRATED LONDON NEWS, Vol. I. 21*s.*; Vol. II. 18*s.*; and Vol. III. (to be published early in January), 18*s.*; handsomely bound with gilt edges, and enriched in gold. THE PICTORIAL TIMES, Vol. I. price 16*s.*, and Vol. II. (to be published the first week in January), gorgeously bound in the illuminated style, with gilt edges. Apply to W. DAWSON & SON, London and Country Newspaper and Advertising Office, 74, Cannon-street, City, London; established 1809.

II.

The Laws of Harmonious Colouring adapted to Interior Decorations. The 4th edition, with 8 coloured Diagrams, 8vo. Price 7*s.*

"In so far as we know, Mr. Hay is the first and only modern Artist who has entered upon the study of these subjects without the trammels of prejudice and authority. Setting aside the ordinances of fashion, as well as the dicta of speculation, he has sought the foundation of his profession in the properties of light, and in the laws of visual sensation, by which these properties are recognized and modified. The truths to which he has appealed are fundamental and irrefragable; and the conclusions which he has deduced from them will admit of no modification either from taste or fashion. Notwithstanding some trivial points of difference between Mr. Hay's views and our own, we have derived the greatest pleasure from the perusal of these works. They are all composed with accuracy and even elegance. His opinions and views are distinctly brought before the reader, and stated with that modesty which characterizes genius, and that firmness which indicates truth."—*Edinburgh Review*, October, 1843.

William Blackwood & Sons, Edinburgh, and 22, Pall Mall, London.

NEW WORK BY THE AUTHOR OF 'SUSAN HOPLEY.'
Now ready, in 3 vols.

MEN AND WOMEN; or, MANORIAL RIGHTS.
By the Author of 'The Adventures of Susan Hopley.'
"This is an admirable novel. A book with a great deal of wisdom in it. It would be unjust to the writer to give any surface sketch of it. Its best art lies in its minutest touches. When once the story has fairly opened, the thrill of interest and excited expectation continues to the last. The characters are veritable as truth itself."—*Examiner.*
Saunders & Otley, Publishers, Conduit-street.

In a small volume, price 3s. half-bound,

POEMS on VARIOUS SUBJECTS. Selected to enforce the Practice of Virtue; and to comprise in one volume the Beauties of English Poetry.

Orders received by all Booksellers.

HENRY COLBURN, Publisher, 13, Great Marlborough-street.

LEAVES FROM THE BOOK OF NATURE.

Early in January will be commenced, under the above title, the regular publication in Parts of the entire Illustrations contained in

SIR W. JARDINE'S NATURALIST'S LIBRARY,

LATELY COMPLETED.

THE ANIMAL DEPARTMENT will contain upwards of 600 Figures—The BIRDS, 590—The FISHES, 267—and the INSECTS, 856, each object having its Native Locality added to its name: the whole carefully and accurately coloured from Nature.

Several subjects of each Department, whether Birds, Beasts, or otherwise, will be tastefully arranged in one large sheet, five of which sheets contained in a cover designed for the Work, will form a Part, price 5*s.* On the completion of the Series directions will be supplied for the proper arrangement of the whole into their respective Classes.

To all persons interested in the instruction of Youth, it is considered this Series, exhibiting the Four Principal Departments of Zoology, will be peculiarly acceptable, while at the same time it will form a useful and instructive embellishment to the Drawing-room or Library Table.

PART I. WILL CONTAIN

Twelve Plates of Sun Birds. | Nine of Humming Birds.
Eleven of Dogs. | Twenty-two of Foreign Butterflies.
Fourteen of British Fishes.

S. HIGHLEY, 32, Fleet-street, London; W. H. LIZARS, Edinburgh; W. CURRY & Co. Dublin.
And all Booksellers, &c. in the Kingdom.

ILLUSTRATED BY LEECH.

N.B.—The New Year being a favourable opportunity for commencing a Periodical, those who may desire to take in THE NEW MONTHLY MAGAZINE, are requested to give their orders without delay to their respective Booksellers.

HENRY COLBURN, Publisher, 13, Great Marlborough-street.

THE FOREIGN AND COLONIAL QUARTERLY REVIEW,

In demy 8vo. price 6*s.*

This Review has been established by a highly influential Literary and Mercantile Proprietary, under the superintendence of the late Editor of the Foreign Quarterly Review, and has already obtained deserved reputation, both for the vigour and information of its Articles,—several of which have been publicly attributed to Members of our Government,—and for the priority and accuracy of its Foreign Intelligence, which is secured through the Influence of eminent Correspondents in our Colonies and on the Continent.

The nature of its proprietary, and the liberal spirit they have determined upon pursuing, the eminent and able Contributors they have secured, and the large capital they have embarked, have all contributed to raise this Review to the highest rank among the Conservative Literary Periodicals of the day, and have procured for it a popularity and success beyond the most sanguine hopes of its projectors.

On the 1st of JANUARY, 1844, will be published, No. V., containing

1. Modern Writers on Dante,
2. Italian Romancers.
3. Life of Pope Leo XII.
4. Travels in the Caucasus.
5. Hayti.
6. Arnold of Brescia, a Tragedy.
7. Tennyson, Browning, and Marston.
8. Causes of Distress—Systematic Colonization.
9. Commercial Policy of Sir Robert Peel.
10. Unpub. MS. of Dante in the British Museum.
11. Ancient Letter on Mary Queen of Scots, from the Flemish.
12. Cortes.
13. Westminster Review on Faust.
14. Notices of New Publications.
Foreign Correspondence, &c.

London: SMITH, ELDER & Co. 65, Cornhill. Edinburgh: BELL & BRADFUTE. Dublin: J. CUMMING.

DURING JANUARY,

MR. VAN VOORST WILL PUBLISH

THE FOLLOWING

NEW WORKS.

1.

MR. GARNER'S

NATURAL HISTORY OF THE COUNTY OF STAFFORD.

1 vol. 8vo.

2.

PROFESSOR ANSTED'S GEOLOGY,

Introductory, Descriptive, and Practical. Part I. price 5*s.* *On January 31st.*

3.

PROFESSOR OWEN'S

HISTORY OF BRITISH FOSSIL MAMMALIA.

Part I. price 2*s.* 6*d.*—*On January 31st.*

4.

MESSRS. TULK & HENFREY'S

ANATOMICAL MANIPULATION.

Fcap. 8vo.

5.

DOMESTIC SCENES IN GREENLAND AND ICELAND.

16mo. price 2*s.* 6*d.*

Part I. price 8*s.* of a New Edition of

MR. NEWMAN'S

HISTORY OF BRITISH FERNS,

On January 31st.

RECENTLY PUBLISHED,

A HISTORY of BRITISH FOREST TREES. By PRIDEAUX JOHN SELBY, of Twizell, Esq. 1 vol. 8vo. with nearly 200 Engravings, price 28*s.*; large paper, 56*s.*

"The best work on Forest Trees is Selby's."

Lindley's *Gardeners' Chronicle.*

MR. YARRELL'S HISTORY of BRITISH BIRDS. 3 vols. 8vo. containing 530 Illustrations, price 1*l.* 10*s.*; royal 8vo. 2*l.*; imp. 8vo. 3*l.* 10*s.*

"Most cordially do we congratulate Mr. Yarrell on the termination of his laborious undertaking. The five volumes he has produced, containing descriptions and figures of every known British species of fish and bird, are in every sense of the word, national works."—*Athenæum.*

MULREADY'S VICAR of WAKEFIELD.—The Vicar of Wakefield, with Thirty-two Illustrations by W. Mulready, R.A., engraved by John Thompson. Square 8vo. 21*s.*: or morocco, 36*s.*

"The work is superior to any modern work."—*Athenæum.*

"There are some designs in the volume in which art may justly boast of having added something to even the exquisite fancy of a Goldsmith."—*Examiner.*

COLOURED ILLUSTRATIONS of the EGGS of BRITISH BIRDS, accompanied with descriptions of the Eggs, Nests, &c. By WILLIAM C. HEWITSON. Six Parts, published at 2*s.* 6*d.* each. About 39 will complete the Work; Monthly.

"His work, in consequence, not only contains numerous eggs which had never been previously figured, but is particularly rich in original and graphic accounts of the birds themselves, and of the peculiar habits by which they are distinguished. In a pictorial point of view, its merits, we should imagine, almost defy competition."—*Edinburgh Review*, No. 156, April, 1843, p. 473.

ILLUSTRATIONS OF BAPTISMAL FONTS. Parts 1, 2, 3, at 2*s.* 6*d.* each.

"We feel very high gratification in introducing this delightful series to the notice of our readers. Each number contains sixteen highly-finished woodcuts, accompanied by a few descriptive remarks, which are written with judgment and discrimination. The Illustrations of Fonts will be completed in eight parts; and Churchyard, Highway, and Commemorative Crosses, will form the subject of a second series. To the well-merited praise of admirable selection, good taste, elegance, and fidelity, we may add a recommendation which not even Camdenians can afford to neglect, namely, that the cost of this elegant work is extremely reasonable."—*Ecclesiologist*, No. 28, Nov.

JOHN VAN VOORST, 1, Paternoster-row.

4. CRITICAL and HISTORICAL ESSAYS contributed to *THE EDINBURGH REVIEW*. By the Right Hon. T. B. MACAULAY. 2nd edition, 3 vols. 8vo. 36s.

Also,

Lays of Ancient Rome. 3rd edit. cr. 8vo. 10s. 6d.

5. THOS. MOORE'S POETICAL WORKS; Containing the Author's recent Introductions and Notes. Complete in one volume, uniform with Lord Byron's Poems. Medium 8vo. 2 Plates, 21s.; bound in morocco, 42s.

Also,

An Edition in 10 vols. fcap. 8vo. Portrait and 19 Plates, 50s.; morocco, 4l. 10s.

Lalla Rookh. 21st edit. fcap. 8vo. 4 Plates, by Westall, 10s. 6d.; morocco, 14s.

Lalla Rookh. 20th edit. medium 8vo. 13 Plates, 21s.; morocco, 35s.

Irish Melodies. 15th edit. fcap. 8vo. 10s.; morocco, 13s. 6d.

6. A DIARY; with STRIFE AND PEACE. By FREDERICA BREMER. Translated by MARY HOWITT. 2 vols. post 8vo. 21s.

Also,

The President's Daughters. 3 vols. 31s. 6d.
The Neighbours. 3rd edit. 2 vols. 18s.
The Home. 2nd edit. 2 vols. 21s.

7. THE CHILD'S PICTURE and VERSE BOOK. A Translation of "Otto Speckter's Fable Book." By MARY HOWITT. Printed in English, French, and German, on corresponding pages, and illustrated with One Hundred Engravings on Wood. Square 12mo. 10s. 6d.
8. THE LIFE and ADVENTURES of JACK of the MILL, commonly called "Lord Othmill." By WILLIAM HOWITT, Author of 'The Boy's Country Book,' &c. 2 vols. fcap. 8vo. with numerous Illustrations on Wood, 15s. [*Nearly ready.*
9. THE LAURRINGTONS; or, Superior People. By FRANCES TROLLOPE, Author of 'Widow Barnaby,' &c. 3 vols. post 8vo. 31s. 6d.

"In this amusing novel Mrs. Trollope revels in the province, peculiarly her own, of humorous satire, trespassing on the verge of caricature, but never pushed beyond the bounds of probability. Its pages will afford the reader frequent and hearty laughter."—*Herald*.

10. A PICTORIAL TOUR in the MEDITERRANEAN. By J. H. ALLAN. Imp. 4to. with more than 40 Plates, and 70 Wood Engravings, 63s.
11. MURRAY'S ENCYCLOPÆDIA of GEOGRAPHY. New edition, with Supplement, brought down to December, 1843. 8vo. 82 Maps, and upwards of 1,000 Woodcuts, 3l.

*** The New Supplement, consisting of one sheet, and comprising a variety of important information, brought down to the present time, *separately*, 1s.

12. M'CULLOCH'S GEOGRAPHICAL DICTIONARY. 2 vols. 8vo. 6 large important Maps, 4l.

Also,

M'Culloch's Commercial Dictionary. 8vo. Maps and Plans, 50s.

13. PROFESSOR BRANDE'S DICTIONARY of LITERATURE, SCIENCE, and ART. 8vo. Woodcuts, 3l.
14. GWILT'S ENCYCLOPÆDIA of ARCHITECTURE, Historical, Theoretical, and Practical. 8vo. 1,000 Woodcuts, 2l. 12s. 6d.
15. THE LONDON DISPENSATORY, containing Translations of the Pharmacopœias, &c. &c. By ANTHONY TODD THOMSON, M.D. F.L.S. 10th edition, corrected, with New Index of Synonymes. 8vo. Woodcuts, 21s.

Also,

Elements of Materia Medica and Therapeutics. 3rd edition, 8vo. Woodcuts, 31s. 6d.

Conspectus of the Pharmacopœias, 18mo. 5s. 6d.

The Domestic Management of the Sick-room. Post 8vo. 10s. 6d.

Atlas of Delineations of Cutaneous Eruptions. Royal 8vo. 29 Coloured Plates, 63s.

London: Longman, Brown, Green, and Longmans.

NEW BOOKS AND NEW EDITIONS

PUBLISHED BY

JOHN W. PARKER, London.

A SYSTEM of LOGIC, RATIOCINATIVE and INDUCTIVE; being a Connected View of the Principles of Evidence, and the Methods of Scientific Investigation. In Six Books. By JOHN STUART MILL. 2 vols. 8vo. 30s.

THE PHILOSOPHY of the INDUCTIVE SCIENCES, founded upon their History. By WILLIAM WHEWELL. D.D. F.R.S., Master of Trinity College, and Prof. of Moral Philosophy in the University of Cambridge. 2 vols. 8vo. 30s.

By the same Author, 3 vols. 8vo. 2l. 2s.

A HISTORY of the INDUCTIVE SCIENCES, from the Earliest Times to the Present.

LECTURES ON THE

PRINCIPLES and PRACTICE of PHYSIC, delivered at King's College, London. By THOMAS WATSON, M.D., Fellow of the Royal College of Physicians, and late Physician to the Middlesex Hospital. 2 vols. 8vo. 34s.

MANUAL of CHEMISTRY. The Fifth Edition, thoroughly revised and greatly enlarged, and containing all New Facts and Discoveries in the Science. By WILLIAM THOMAS BRANDE, F.R.S. of Her Majesty's Mint; Prof. of Chemistry at the Royal Institution. 8vo. (1500 pages) with numerous Woodcuts, 25s.

By the same Author,

DICTIONARY of the MATERIA MEDICA and PHARMACY. 8vo. 15s.

TABLES of CHEMICAL EQUIVALENTS, WEIGHTS, MEASURES, &c. On Five Large Sheets, 3s. 6d.

Octavo, 4s., the THIRD NUMBER of the

CLASSICAL MUSEUM.

Contents:

I. On the Chorus of the Eumenides. By Thomas Dyer.
II. A Memoir illustrative of the Geography of the Anabasis of Xenophon. By W. Francis Ainsworth. Part II.
III. Excursions from Rome in June, 1843. By F. Buxton Whalley.
IV. On the Rhythmical Declamation of the Ancients. By Professor John S. Blackie.
V. D. Junii Juvenalis Satiræ, cum Commentariis C. F. Heinrichii. 2 vols. Bonn, 1839. By Professor G. Long.
VI. Niebuhr and the Westminster Review. By Dr. W. Smith.
VII. On the Meaning of "Civilization." By G. C. Lewis, A.M.
VIII. Miscellanies. IX. Notices of Recent Publications.
X. List of Recent Publications.

The TWENTY-THIRD VOLUME, 4s. 6d., also the ANNUAL VOLUME for 1843, 7s. 6d., of The

SATURDAY MAGAZINE. Published in Weekly Numbers at 1d., Monthly Parts 6d., Half-Yearly Volumes, 4s. 6d., and Annual Volumes at 7s. 6d. each.

No. IX. of

PART MUSIC, Class A, containing Seven Pieces of Sacred and Eight of Secular Music, for Soprano, Alto, Tenor, and Bass. Edited by JOHN HULLAH, Professor of Vocal Music in King's College, London.

Price of the Score, 2s. 6d.; of the Separate Voice Parts, 8d. each.

STORIES of the GODS and HEROES of GREECE, told by BERTHOLD NIEBUHR to his SON. Edited by SARAH AUSTIN. 2s. gilt.

CAN WOMAN REGENERATE SOCIETY?

Contents:—Chap. I. Introduction.—II. Social Intercourse.—III. Morals—Intelligence—Actions.—IV. Dignity of Character.—V. Knowledge.—VI. Love—Friendship.—VII. Old Maidism.—VIII. Marriage.—IX. Poetry—Imagination—Spirituality.—X. Religion.—XI. Conclusion. 3s. 6d.

A MANUAL FOR TEACHING

MODEL-DRAWING from SOLID FORMS, combined with a POPULAR VIEW of PERSPECTIVE, and adapted to the Elementary Instruction of Classes in Schools and Public Institutions, as taught under the Sanction of the Committee of Council on Education. By BUTLER WILLIAMS, C.E. F.G.S. Handsomely printed in 8vo., and illustrated by Shaded Engravings of the Models, and numerous Woodcuts, 15s.

Also, with numerous Woodcuts, and Outline Figures of the Models, 3s.

INSTRUCTIONS in DRAWING, for the Use of Elementary Schools, Abridged from the foregoing Manual.

POPULAR PHYSIOLOGY; being a Familiar Explanation of the most interesting Facts connected with the Structure and Functions of Animals, and particularly of Man. By PERCEVAL B. LORD, M.B. M.R.C.S. Second Edition, enlarged, with Illustrations, 7s. 6d.

LONDON, SATURDAY, DECEMBER 30, 1843.

REVIEWS

The History of the Town of Gravesend, in the County of Kent, and of the Port of London. By R. P. Cruden. Pickering.

We have here a history of Gravesend, from the time when, under the name of "Gravesham," it is recorded in the Domesday Book as "in the possession of Herbert the son of Ivo," and containing "four carrucates of arable land, four villeins, eight servi, a church, and a landing place"—altogether worth eleven pounds,—to the year 1842, when it numbered, with the adjoining parish of Milton, fifteen thousand inhabitants, and received above half a million of visitors annually,—all in search of health or pleasure. In the course of this history, Mr. Cruden gives us many notices of other towns incidentally connected with Gravesend, particularly Deptford and Woolwich; but the most interesting and important portion of the work is that which relates to the Port of London, and in which the writer endeavours to ascertain the period at which the embankments on either side of the river were constructed.

In a former review, (*Athen.* No. 753) our attention was drawn to the original state of the river, and the adjacent country, and we then pointed out the probability of the Thames having, at even a comparatively late period, been a frith or estuary, remarking that this view was not only favoured by geological researches, by the name of the river, according to Ptolemy—"*Tamessæ Estuarium*," but by many corroborative historical notices. This opinion, that the Thames was "a frith or *sinus* of the sea," has, as our readers will probably remember, the support of Sir Christopher Wren, whose attention was drawn to the subject when engaged in the excavations which, previously to the rebuilding of St. Paul's, he made in its immediate neighbourhood. His opinion was confirmed too, by viewing the strong embankments, which first confined the wide confluence of waters just below the city to a narrow channel, and he assigns these great and important works to the Romans. It is this part of his theory which Mr. Cruden combats, and, we think, successfully.

That works of such magnitude should be assigned to "those brave olde Romans," as Leland calls them, and to whom our early antiquaries give the credit of everything vast and abiding, cannot surprise us; but on looking more closely at the state of Londinum under Roman sway, we shall find that the masters of the world had no inducement to undertake so large and so expensive a work. Tacitus describes Londinum as distinguished for the number of its merchants, and the abundance of its stores; and from this phraseology, modern writers have too hastily concluded that London was a port, as well as a city. But this by no means follows. Some of the chief marts of ancient commerce were inland towns, and when we remember that one of the first works of the Romans was to construct the Watling Street which branched off direct from London to Dover, and which was invariably used by the legions,—when we remember, too, that the "stores" of which Tacitus speaks were, in other words, valuables, "*copia*," and that they consisted not of heavy goods, but of ornaments, utensils, apparel, armour, and like things, it becomes obvious that for the conveyance of goods like these, the merchant vessel, and the long voyage round the Foreland was not needed, and that the line of pack-horses, along the Watling Street, would bring to Roman London, as they did to Saxon London, all the stores required, as safely, and far more quickly.

Very little allusion is unfortunately made to London, either by the Roman or earlier Saxon writers; but the *river* is absolutely unnoticed until the incursions of the Danes; and then the Saxon Chronicle affords us repeated instances of these fierce pirates sailing up the Thames, and attacking and burning London.

Considering the inferior station which London held among towns, during the early period of Saxon rule, and exposed as it was to the repeated attacks of pirates, it is still more unlikely that the Thames embankments could have been the work of Saxon hands. The Saxon clergy, however, were capable of constructing somewhat similar works, for—

"They recovered lands in Romney Marsh, before the Norman Conquest. Somner notices a grant of Archbishop Plugmund, in the year 895, of the land called 'Wesinmersh, beside the river called Romney;' and Dr. Campbell referring to it, observes, 'we have no distinct account of the time when the first attempts were made to gain upon the estuary, by which the river Rother, anciently called Limene, discharged itself into the sea between Lyd and Rodney; but as there were marshes there in the time of the Saxons, we have good grounds to believe that the practice of *inning*, that is, wresting land from the river or sea, was introduced by their clergy, to whom the property in these parts chiefly belonged.' The Saxons were capable, according to this proof, of the execution of embankments; but they do not appear, by any direct evidence, to have constructed any to confine the channel of the Thames eastward of London, though early in the eleventh century (A.D. 1008) a bridge was standing across the river at London, and it was probably connected with the uplands on the south side, by a causeway raised across the low ground above high-water mark. This supposed state of the Thames at London Bridge, is in accordance with the account given of the military movement of Canute, who is said to have passed the bridge with his vessels in the year 1016, by cutting a trench on the south side (through the causeway?) for their passage.*"

This mention of a bridge at so early a period is deserving of more attention than it has hitherto received. The construction of bridges belongs to a very advanced stage of civilization; and yet at a period when architecture scarcely dared to construct a stone building, but contented herself with rubble and rough-hewn planks alike for cathedral and palace,—almost half a century, too, before the Norman school was known in England,—London, a town which had been made a heap of ruins by the Danes little more than a hundred years before, is represented as possessing a bridge! And this bridge, too, whether the river flowed *then* in its present channel, or, as we believe, overflowed the low grounds below, and formed a wide lake, was no slight structure. It must have been long, for the river now measures 290 yards across, at the bridge at high water; and it must have been strongly built, or Canute and his soldiers, instead of digging a trench round its south end, would have destroyed it, and passed through. Such a work could not have been Saxon. Might it not have been a *Roman* remain?

The "Trajectus," which connected the Watling Street south of the river with London, was, as we have every reason to believe, at the Horseferry Road; but a bridge, connecting the southern bank of the Thames, where, from the Roman remains discovered, there were evidently many inhabitants, would afford facilities for communication not merely with them, but with the Watling Street. The plausibility of this conjecture—for we willingly allow it to be only conjecture—is increased by the fact, that no mention is made by the Saxon writers of the building of this bridge, which certainly would have claimed equal notice with many things that have been recorded; and, also, that during the eleventh century we find it burnt down, and repaired again; and again in Henry the First's reign greatly injured, but still soon repaired; proving to us that it was probably a long raised causeway, intended for passengers, and on which perhaps were dwellings, but certainly not designed for vessels to pass under. Thus, in the only instances in which vessels *above* bridge are mentioned, we find that both Sweyn and Canute were compelled to dig a deep trench, and drag their ships round to the apparently better anchorage at the mouth of the Fleet.

The name "Southwerke" may afford a corroboration of our view. What *work* was *there* important enough to give a specific designation to the place? No castle, no palace, no stronghold was there: might not the "work" be the raised causeway, with its stone piers and strong arches? wonderful, as all works in *stone* were, to the Saxons, and always noted by them with especial admiration.

To return, however, to our "embankments." That they were not formed in Saxon times is well argued by Mr. Cruden, from the absence of all notice of them in Domesday. To this we may add, that up to the time of the Conquest, although London was gradually rising, still the *river* was comparatively little used; for travellers, whether pilgrims or merchants, nobles or clergy, still kept to the old road—the Watling Street,—making Rochester the middle resting place to "li clef d'Angleterre," as an old manuscript of the twelfth century terms it, Dover. In the subjoined extract, Mr. Cruden endeavours to fix a time at which these embankments were commenced. It at least shows that attention was directed to the subject.

"Soon after the conquest, the Norman arts were introduced, and the population received an accession from the continental territories of William of Normandy. Gundulph, consecrated Bishop of Rochester, in the year 1077, was distinguished as an architect, and he was appointed by the Conqueror, principal surveyor at the erection of the citadel of the Tower of London; he was also employed upon the castle of Rochester. Under his auspices and direction, the mechanical arts received a great impulse; but still there is no evidence that in his time the system of embankment on the Thames had been introduced, though increased means for such an undertaking were then at hand. The observations of Dr. Campbell, suggesting that the work of wresting lands from the river Rother, was commenced by the clergy, to whom the property in those parts chiefly belonged, points to a course of inquiry into the origin and progress of the embankment of the river Thames. 1135. In this year the Abbey of Stratford, in Essex, was founded by William Montfichet, and he endowed it with his whole possessions in West Ham, consisting of arable and pasture lands, meadows, marshes, &c. This Abbey, says Leland, 'first set among the low marshes, was after with sore fludes, defayced, and removed to a celle or graunge longynge to it, caullyed Burgestede, in Essex, a mile or more from Billerica. The monks remained at Burgysted untyll entreté was made of one of the Richards (I.) kings of England, who toke the ground and Abbey of Stratford into his protection, and re-edifienge et, brought the foreseyde monks agayne to Stratford, where among the marsches they reinhabyted.' From this glimpse of the site at the time of the foundation, it seems that there were marshes or land recovered from the river, near the foot of the rising ground, which in such a position might have been easily effected; but from the circumstance of the monks being driven from the Abbey by the 'sore fludes defacying it,' it must also be presumed, that the work was no better performed than might be expected in the incipient stage of the practice of 'inning,' and that this was not an attempt to raise an embankment to restrict the channel of the river, but merely an advance from

* "Then came the ships to Grecnwich, about the gangdays, and within a short interval went to London, where they sunk a deep ditch on the south side, and dragged their ships to the west side of the bridge.—*Saxon Chronicle*, by Ingram. Sub anno 1016."

Digitized by Google

the foot of the rising ground, to obtain ground for the Abbey. There is nothing to lead to the presumption, that the 'sore fludes' that had 'defacyed' the Abbey, had laid under water the whole level as it now appears from the river to the uplands. A few years later, that is in the year 1178, 'Richard de Lucy, justiciary of England, founded and endowed an Abbey of canons regular of the order of St. Augustine, at West Wood, in his village of Lesnes, the site being about a mile and three-quarters westward of Erith church,' (at the foot of the rising ground, or as the writer of this account represents it) 'at the edge of the marshes.' This is the same course as that which was taken by the founder of the Abbey of Stratford, on the opposite side of the river, both with respect to the site chosen at the edge of the marsh, and as to the possession and management of the lands passing into the hands of the clergy, who, as Dr. Campbell observes, introduced the wresting of lands from the river Rother, in Romney marsh. These coincidences suggest the probability, that the embankment of the Thames was commenced about the time when these Abbeys were founded, especially as no positive evidence appears that the work was commenced earlier; and these were not attempts to grapple with the difficulty of restricting the channel of the river, but a beginning at the foot of the uplands to make gradual approaches to the great line of embankment that was ultimately executed. In the twelfth century, when these Abbeys were founded, the Thames spreading without restraint to the hills on either side, must have run its languid course over a wide expanse of unoccupied water surface, among the hillocks and sand-hills, raised by its own diffusion. No busy towns were then to be seen; the places on the shores mentioned in the Norman survey, were the manors in which the present towns bearing the like names somewhat modified or corrupted, have since been built; which manors contained few habitations then, and these were spread over the lands upon detached sites. No smooth pastures, with lazy cattle grazing and fattening, then enlivened the landscape; no sounds of the labouring hammer, or of congregated mechanics, were then to be heard. No structures more stately than the Abbeys had preceded them on the margin of the river; and these were to be traced only by the curling smoke rising from their tranquil hearths amidst the sylvan scenery."

Having thus shown that men's minds were engaged upon improving the banks of the river, Mr. Cruden next gives us the following extracts, proving that, by whomsoever undertaken, the great embankments were completed by the beginning of the thirteenth century:—

"The commencement of the great scheme of a general embankment having been shown, the progress of it is now to be investigated, and upon this point the Statute Book affords some valuable information. The earliest printed statutes relating to embankments, are of the reign of Henry III., but these refer to laws of an antecedent period. It is provided by the great charter of the ninth of Henry III., A.D. 1225, that 'no town nor freeman shall be destrained to make bridges nor banks, but such as of old time, and of right, have been accustomed to make them in the time of King Henry (II.) our grandfather.' Chap. xv. Again, 'no banks shall be defended from henceforth but such as were in defence in the time of King Henry our grandfather, by the same places, and the same bounds, as they were wont to be in his time.' Chap. xvi. These solemn and emphatic references to the provisions of the law respecting embankments and bridges, of the reign of the Second Henry, contain a manifestation that it was in his time, namely, between the years 1154 and 1189, that the work of embankment had become an object of public importance, requiring the direction and aid of the law. This date of the earliest laws upon the subject, accords so exactly with the period of the first operations at Stratford and at Lesnes, as to strengthen in a material degree the conclusion that has been arrived at, that the embankments of the Thames were commenced early in the twelfth century. When the work of 'inning' had been pursued for a century, experience had developed salutary principles upon which to legislate soundly, and the code of regulations upon which all modern laws upon the subject have been founded, was framed by Henry de Bath, justiciary of England, from 1238 to 1255, in the reign of Henry III., a proceeding which proves that the practice of embanking had been vigorously pursued in the interval. * *

"1279.—The next and concluding testimony upon this point is very important, for it conveys direct proof of the time when a considerable embankment was commenced and finished, and confirms what has been said concerning the first works of the Abbots of Lesnes and Stratford, these being considered but as approaches from the uplands towards the deep current. Lambarde says that the annales of St. Augustine do report that in the year 1279, the Abbot and Convent of Lyesnes (Lesnes near Erith,) enclosed a great part of their marshes in Plumstead, and that within twelve years after, they *inned* the rest also to their great benefit, and this it may be contended, means, that between the years 1279 and 1291, the wall of Plumstead level that restricts the channel of the river, was completed."

We have now as conclusive evidence as can well be desired, that between 1140-50 and the year 1200 these embankments were completed.

The next question is, by whom were they constructed? On this point the writer before us does not enter. We will, however, attempt the inquiry.

London (see *Athen.* No. 723) was of inferior importance under the Saxon dynasty; and during the reigns of our three Norman sovereigns she was decidedly second to Winchester. The disastrous wars of Stephen were beneficial perhaps to no portion of the kingdom, except to London; but to her, the sack and destruction of Winchester brought not only additional wealth, but a supremacy never since contested. Although London was not until then recognized as the chief city, still, from the time of Athelstan, her commerce had been increasing, and the bounds of the city enlarging. During the eleventh, and earlier part of the twelfth century, that commerce was increased by a closer intercourse with Flanders, and new channels of trade were opened with the more northern parts. It is at this period of the history of London that the importance of a *river way* would first become apparent. The rich garments of southern Europe, the gold and spices of the East, might conveniently be brought to London along the old Watling Street, and by the accustomed mode of carriage; but heavier goods—fish, and the finer species of woollens, and furs, now become an article of extensive commerce,—would be too ponderous to be brought by land carriage; and, besides, Dover stood quite out of the road of the Baltic or Flemish traders in their visits to London. At this period, too, London was contesting the supremacy with Winchester;—it was important, therefore, that she should endeavour to the utmost to avail herself of that advantage which Nature had denied to Winchester, the possession of a noble river, navigable by the largest vessels.

The turbulent reign of Stephen was not a period which held out encouragement to the Londoners to undertake so great a work, but from the accession of Henry Plantagenet leisure and security were afforded; while the transfer of the wine trade from Southampton to London, consequent on the removal of the seat of government from Winchester, afforded another inducement to the citizens and merchants to improve the "water-way." Thus circumstances point to this era as the period of the erection of these embankments. Let us now inquire whether this great and costly work was undertaken by the King or the City.

The records of the City during the reign of the first Plantagenet are but meagre. Those during the reign of his son Cœur de Lion, are numerous and important. We find from them, that the City had now obtained a Lord Mayor; that it considered itself, and on many occasions bore itself, with an independence of which we have no record previously; and it claimed a kind of jurisdiction over more than sixty miles of the river Thames. This right is first specifically stated in a record which declares that in 1236-7, Jordein Coventre, one of the sheriffs, was sent by the Lord Mayor and aldermen, "to remove certain kiddels that annoyed the river Thames and Medway." He seized and imprisoned some of the offending fishermen, and his right to do so was recognized by the king's council. This is the first notice on record, as it appears, of civic jurisdiction in respect to the conservancy of the Thames; but the civic authorities, in maintaining their claim, on a subsequent occasion, asserted that their right could be traced up to the time of Richard the First. Now this right, important even in the present day, was *most* important in the twelfth and thirteenth centuries. The extent of this jurisdiction is thus briefly set forth:—

"There not having been a Session of Conservancy held at Gravesend for many preceding years, the Lord Mayor accompanied by one of the Sheriffs, several Aldermen, and the city law officers, attended by the Water Bailiff and fifty others, took barges at Billingsgate, on the 3rd day of July, 1616, and proceeded to Gravesend, where a Court was then held. Upon that occasion, a jury was empannelled, and a charge was delivered by the Common Sergeant, in the absence of the Recorder, which describes the nature of the authority exercised. First, concerning the stream, inquiry was to be made whether any persons had erected wears, kiddels or engines, or had knocked (driven) any posts, piles, or stakes, within the river, which might in any sort hinder the stream, or the navigation, or passage of ships, barges, boats, or vessels within the same; and whether any person had cast any soil, rubbish, or other filth into the river. Secondly, the jury were charged to inquire concerning all encroachments upon the river and the banks thereof, and of all bridges, flood-gates, mill-dams, and such annoyances, erected upon or near the banks. Thirdly, for the preservation of the fish within the river, inquiry was to be made, whether any fishermen or others had fished at any undue or prohibited seasons. In all cases, the jury were to make presentment of parties offending."

Great privileges these, while the feudal system was still in operation, for any city, but especially to be enjoyed by a city which had the King's own stronghold on one side, and the King's palace on the other. Yet, neither the Constable of the Tower, nor the Earl Marshal of the palace, not even the King himself, was recognized as conservator of the river Thames, but the civic monarch chosen each year by the voice of its inhabitants. What then induced the first Plantagenet or his son (each sufficiently desirous of the lion's share in all things,) to concede so important a portion of their prerogatives?

If the citizens undertook the construction of the Thames embankments, the conservancy of the river, would follow, almost of course. What use would it be that they should expend such large sums as a work like that must have cost, unless the right of removing whatever might be likely to injure the embankments, or of doing whatever might be necessary for their conservation or repair, were secured to them? The importance of these embankments to the city itself, though extending nearly forty miles below bridge, will appear from the following statement, which we quote from Mr. Walker's late Report on this subject. "The effect of these embankments, by contracting the width, has been to increase the depth under low water, of the part between the banks, and *thereby improve the river for an extent of navigation for which in its natural state it would have been quite unfit* from want of depth, and from the uncertainty of the channel. This deepening has been effected by confining the current downwards of the land or fresh water, united with the tidal

Digitized by Google

water to act upon a limited width—thus its velocity and scouring force have been increased, and the channel has been deepened."

Now this was precisely what the increasing commerce of London in the twelfth century required; and the immediate effect of this accelerated current would be, to sweep away the old bridge, and to render a new one indispensable. And this we find was the case, for old London bridge was commenced under the superintendence of Peter of Colechurch, some time between 1170 and '80, and the numerous traditions respecting its erection, and the pride with which it was always viewed by the citizens, seem to point to some important changes connected with its foundation. Now if the river up to the time of its embanking formed, as we heretofore endeavoured to show, a large lake below, whence the name, otherwise unintelligible, of "the Pool"; while higher up, it flowed in a shallow stream impeded by marsh-lands, the effect of these important works as they proceeded would be, to increase the force of the current, which would carry away every opposing obstacle. The earlier bridge, as we have seen, must have been a work of some strength, but however well it might have spanned the waters reposing in almost lake-like calmness below, and running their shallow and sluggish course beyond, a bridge of far stronger construction now became necessary. That at that time there were engineers fully capable of forming these embankments, is proved by there being men competent to construct a bridge, whose foundations stood unimpaired for six centuries. Peter of Colechurch, be it remembered, was not its only builder; Master Isembert, clerk and master of the school at Xaintes, was appointed on the decease of the priest of St. Mary; and its completion seems to have been, after all, assigned to a third. There was therefore no lack of engineers,—quite a sufficient number indeed, without summoning, as did one of the old London legends, his Satanic Majesty to their council.

From this period it is curious to mark how the river side became the chosen site for great public establishments. Ere the close of this century the Fishmongers removed from "Old Fish Street," and built their stately houses at the bridge foot, and the Hanseatic merchants of the Steel-yard built their warehouses, with their minaret-like watch tower: and the merchants of the Vintry built their "large stone houses." Higher up, too, the bank of the river became the chosen site for the establishment of the Templars; while early in the following century, the Black Friars and the White Friars convents were also on its banks; and the splendid Palace of the Savoy, and the mansion of the Archbishop of York rose yet farther west. Ere another century passed away, the northern bank of the Thames, up to Westminster, became lined with the palaces and houses of prelates and nobles; and "the silent highway" became well nigh as populous as West Cheap. Taking all these facts in connexion, we think it will be difficult to avoid the conclusion, that the Thames embankments were constructed during the latter half of the twelfth century, and at the cost, and under the superintendence, of the citizens of London.

To return from this long digression to the work before us, we find, from the following characteristic entries, that the rights of the conservancy of the river were not maintained without occasional opposition on the part of the kingly authorities, especially of the Constable of the Tower; and probably the continued contests in regard to the Thames, went far to encourage and deepen that spirit of hostility with which the municipal authorities, with but some rare exceptions, regarded the royal, and the royal power, with scarcely any exception, regarded the municipal, from the days of King John to the times of the Parliament:—

"Early in the fourteenth century, the Constable of the Tower claimed six shillings and eight-pence yearly from boats belonging to the inhabitants of London, which they called 'staleboats,' fishing in the river Thames between the Tower and the sea, for fish called 'sprots;' and for the boat of a stranger eight shillings. At a subsequent period, the Lord Mayor and Commonalty of London moved the Commons to require that a patent which had lately been made to the Constable of the Tower to take custom of wines, oysters, muscles, fish, and other victuals coming to London by water, might be revoked. 1376-7. In this year it was ordained in parliament, that for the saving of salmon and other fry of fish in the Thames, almost destroyed by certain engines, as the King himself had often found, all trinks between London and the sea should be overthrown, and that no salmon should be taken between Gravesend and Henley-upon-Thames in the kipper time, viz., between the Invention of the Cross and the Epiphany. This curious incident conjures up an interesting picture of the river at that period, and another, though not pertaining to the fishery of the Thames, may be added to assist the imagination to embellish the scenery. 1381-2. In an enumeration of the fees of the Constable of the Tower, the following occurs, 'all maner of Swannes that come through the bridge, or beneath the bridge, be clearlie the Constable's, and also there shall [be] noe swanne eyre beneath the bridge, but the owners of the said swannes shall make a fyne for them to the said Constable, and over that, the Constable shall have of every nest a siguet.'"

The swans mentioned in the last paragraph were doubtless bred among the sedge and rushes on the southern bank of the river for the purposes of sale. In the curious list of prices at which each article of provision is to be sold in the London markets, in the reign of Henry III.,—and which the reader will find in Stow—swans take their place, and the price at which they are valued prove that they were considered as no uncommon article of luxury. Salmon, although plentiful, we find, by reference to the same list, always bearing a high price. During the time it was not allowed to be taken in the river Thames, it appears to have been brought from other parts, for, in the same ancient list of prices, we find that a salmon at Christmas was to be sold for five shillings. This sum, multiplied by fifteen, will be 3*l.* 15*s.*, and allowing the weight of the salmon to be thirty pounds, we shall find our forefathers paid much about the same price as their descendants do at the same season, 2*s.* 6*d.* a pound. Much curious information is collected by Mr. Cruden relative to the preparations made at Tilbury Fort, at the time of the Spanish Armada. The letters of the Earl of Leicester for "demi-cannons," "cheynes and lighters," and earnestly praying that "one thousand or more horse be sente," all give a vivid idea of the hurry and anxiety of that excited period. But whatever were the dangers, the old English billmen would not fight unless well fed; and thus, in a subsequent letter, we find the Earl almost as anxious for the arrival of "the vytelles," and "Robert Arden to bring c. tonnes of beere," as he is for the more warlike stores. The following extract from a proclamation dated August 7th, 1588, in the Privy Council Office, shows the ample provision made:—

"Item that every souldier or other person being placed and appointed in the bande within the circuite of xx miles distant from her Highnesse Court, under the right honourable the Lord Chamberlaine her Maiesties Lieutenant of the same bande and armie, and receiving her Maiesties pay by viii^{d} the day, having to dinner or supper good wheaten bread and drinke, beefe, mutton or veale boyled, and pigge, beefe, mutton, veale or lamb rosted or otherwise, vpon the fish dayes to have good wheaten bread and good drinke, salt fish or ling, egges, butter, pease or beanes buttered, and so having competent and sufficient thereof for the sustentation of their bodies, every man to pay for his meal iii^{d}. Item a pounde of tallowe candels made of wicke iii^{d}. ob. (3$^{d}\frac{1}{2}$). Item, a featherbed for one man one night and so depart 1^{d},—a feather bed with necessary apparrell thereunto for one man alone by the week vi^{d},—and the like featherbed and furniture by the weeke, for two lying together viii^{d},—a mattrice or flockbed for one or two lying together by the weeke iiii^{d}. Item, three horseloaves at the Bakers, every one lofe weighing xviii ounces Troie, i^{d},—and two of the same loaves within every house i^{d}."

The mention of "horse loaves" shows to how late a period the custom of feeding horses with coarse bread prevailed. The subsequent paragraph directs "good sweete hay" to be provided for the horses, and also grass, but there is no provision of corn. The loaves were, therefore, doubtless intended to supply that deficiency.

Under the head of Woolwich, Mr. Cruden affords us much curious information relative to the dockyard, and determines the contested question, whether the ship the 'Henry Grace de Dieu,' was built at Woolwich, in the affirmative. We have extracts from the original book of the "costs and charges" for building this celebrated vessel, and from which we learn that the whole cost, exclusive of the timber, which had been gratuitously supplied by various persons, was 6,472*l.* 8*s.* 0$\frac{1}{2}$*d.*

Wanderings of a Journeyman Tailor through Europe and the East, during the Years 1824 *to* 1840. By P. D. Holthaus. Translated by William Howitt. Longman & Co.

The wood-cut which faces the above promising title-page, will pleasantly recall to all who have ever travelled in Germany, one of its characteristic figures, the *fighting* Apprentice: who, in his circuit from town to town, must needs beg of the passer-by; and seldom begs in vain. Peter Diedrich Holthaus, however, is obviously to be numbered among the prosperous. He has a pair of good strong boots on his feet, besides those which, according to usage, make a brave display on the top of the well-filled knapsack:—the sword at his side denotes, it may be presumed, that he has travelled through remote lands, in which needle and shears would have proved insufficient for his defence; while the braiding on the cuffs of his carefully-made *blouse*, advertises the guild to which he belongs. The traveller who cares for character and local humour, may often do worse than walk his German mile by the side of the wandering *gesell*; though he will not often encounter one who has roamed so far or seen so much as the enterprising Tailor, whom Mr. Howitt has here introduced to the English fraternity; for Peter has scrambled among the klephtes of Tripolitza—played with Neapolitan sharpers—brought home a Pilgrim's certificate from the Holy Sepulchre—worn out his appointed days in quarantine, and his weary weeks in hospitals—and, in short, is a Tailor in ten thousand, to whom the world should bid welcome.

But the narrative of his travels is less racy than might have been expected. We fear that the wise man of Werdohl, in Westphalia, who re-wrote Holthaus's notes for the press, did not attach sufficient value to matters of personal detail, and smoothed them away, with the intention of bringing, into full view, all such observations as tended to establish his hero's character for taste and information. The public, however, would have gladly exchanged some of the Traveller, for more of the Tailor. Not that Peter Diedrich hides "his mystery" under a bushel. In one respect, his book is a book of patterns. With what unction does he contemn the bacon-smeared garments of the Raitzen or

Digitized by Google

Illyrians!—with what pride describe the "Attila coats" of the Hungarian nobles! with what enthusiasm the fur and the "brown smooth coat descending to the knee, and cut wide open about the neck," of the Circassians! How alive he is to the fine effect of the red long Tyrolese waistcoat, the black lacquered braces and the short breeches of the handsome and strong-legged race met with, "stepping out" in the valley of the Inn, each with a nosegay or a feather (this touch of costume was *above* our tailor's record) *at the back* of his sugar-loaf hat! How he revels in the Uhlan uniform of corn-flower blue cloth! Then the tight bodices of gay-coloured stuff paraded by the Armenian women could not but fascinate one who, after the whimsical fashion of his country, devotes himself to the apparelling of Beauty, as well as to the caparisoning of Valour! But he breaks out into the liveliest ecstacies, when describing the toilette of the descendants of Alcibiades—"the tight blue jacket, embroidered with silver and gold,"—the chemisette "on which handsome buttons of gold and precious stones glitter"—the gay shawl round the waist—"the Fustanelle" or kilt, worn over the trousers which "are made gaiter-fashion, and fasten on the outside with hooks and eyes." All this is characteristic and amusing. But we would fain have had more of the man: have been told for whom he worked, and at what wages, and how he obtained employment. Had such a shrewd observer no eye for character in his own class? Were there no roguish Greeks, nor merry Viennese, nor solemn, apathetic Turks who shared his board, worth *making up?* We have been told all about the Holy Sepulchre, the dogs that disturb the Franks in the streets of Stamboul, the scenery of the Nile, and the relics of Athenian art, by more competent witnesses; but travels among the people of Europe and Asia are rare; due opportunities for remark being denied a pilgrim of the average writing class, unless he *borrow* the gipsy fashions of the author of 'The Bible in Spain,' and, in heart, as well as in dress, make himself able to fraternize, with "waif and stray," wheresoever they be encountered.

Not much, then, can be extracted from this book, the writer's vicissitudes in fortune being glanced at, not dwelt upon. In one German town we find him leaving his knapsack for debt, with the Herberg's Father (or landlord of one of the inns to which such travelling journeymen resort), and plodding on in search of dollars to redeem it—anon in some small difficulty about a passport; shortly after with true national intolerance turning up his nose at the Jews of Prague; and presently laconically and drily describing the loose and knavish ways of the Hungarian gipsies. Perhaps a peep into the city of Bukarest will afford as fair a specimen of our author's travelling *stitch* (or style) as we can pick out:—

"In the mean time Bukarest did not look by any means so handsome close at hand as at a distance. It has dirty, narrow, unpaved, and hobbly streets; all filled with thick planks and beams, for a canal six feet deep runs through the middle. Into these canals all kinds of filth is thrown, so that the excessive heat of summer occasions a most pestiferous stench. The houses are some of stone, but still more of wood, low and wretched. I cannot present the reader with a catalogue of handsome buildings. But the number of churches is wonderful; there are upwards of two hundred and fifty, and nearly every Bojar or noble has one in his court. Every church has from one to three towers, but in other respects is very simple, with few ornaments, and a low roof, but on the walls are numberless paintings of saints. There is also a vast number of convents. The religion of Wallachia is the Greek. Here is a metropolitan church, with its metropolitan, that is, an archiepiscopal church, with its archbishop. It stands on a hill, and is remarkable for its number of beautiful paintings, which represent devils and angels, and the last judgment. In a framework before the church hangs a huge bell, worthy of notice. It was to me very striking that you heard here so little ringing of bells. The Turks have very much restricted the use of them. Instead of the tolling of a bell, they have a singular bell-ringing, or rather puppet play. Aloft on the tower are set up a couple of boards, and are struck with a hammer, as a drum is beaten: that is the daily call to church. Is it Sunday or a festival, they hammer on an iron or other metallic plate; after this knocking, the bells are sometimes also rung. Besides these numerous Greek churches, there is also a Catholic one, and one of the Reformed Lutheran, in the last of which the preaching is in the Hungarian language, for here are many reformed Hungarians. There is also a Swedish church, or what is called the Kolze, built by Charles XII., which is now sold to the Wallachians. Bukarest is a great city, with many suburbs, and nearly nine miles long. The Kelle flows nearly through the middle of it, and supplies the city with its water. A cask is drawn about in a little cart, and you hear on all sides the cries—'Appa hop!' that is, 'Buy water!' Every family has a similar cask, into which the water is poured. They then put a little alum into it, and after it has been well stirred about, and has stood an hour, it is clear and drinkable; but as it comes direct from the river it is in the highest degree impure. A cask of water commonly costs twenty, in winter even as much as forty parah, or from one to two silver groschen. All dead cattle, cats and dogs, are flung into the Kelle, of the latter an incalculable number. On the banks of the Kelle wild dogs take up their abode, which are called Kelle-dogs, and which find the inhabitants enough to do; but they have now found a good means of reducing those troublesome animals, in the Gipsies, who, here constituting the especial outcasts of society, are employed for their annihilation. They drive round the city in wagons, and strike the dogs dead. You often see from forty to fifty dead dogs on their wagons."

There are some town pictures taken in Poland, which are as brightly coloured as the above; and the following detail of a march, besides satisfying the reader, that our Tailor has more than a ninth share of courage and endurance, will also explicitly point out to the Travelling Apprentice likely to be *bitten* by his book,—that he must be content to "rough it." Elsewhere, indeed, Holthaus tells us, that for months the pavement was the best couch of rest he could find: however bad for the embroidered blouse he wears in the frontispiece. To return, however, to the march from Cronstadt:—

"After a short stay in Cronstadt, I met with two comrades of the same profession as myself, both Bohemians. We found ourselves very friendly together, since we were in similar case and with similar views; they too would fain enter Wallachia, and had no permission. We were referred to a peasant, who it was said would probably put us across the frontier if we paid him twenty florins conventional müntz (about two pounds English). We resolved to try this, and marched in the night from Cronstadt to the village of the peasant. The man immediately shut us up in a cellar, where we lay till the next night; then at nine o'clock we arose. At first it was a faint moonlight, but this vanished behind clouds: it became dark, and finally Egyptian dark; and we groped along for probably twenty miles through deep defiles, and over hill and dale. We then came into the district of the keen frontier watch, where the watch-stations stood at about a hundred yards from each other, and continually gave the parole call to each other; yet the darkness favoured us, and we passed luckily through. After a march of two hours farther, the peasant quitted us, and we had to find the way ourselves. When we had done this for some time, we came past a Wallachian civil-watch. We had not gone many yards when some one came running after us. We took no notice, did not allow ourselves to be disturbed, but marched briskly on. In this manner we went on for two hours, when we fell in with a miserable hut, which looked like a Wallachian public-house. It wanted yet an hour to sun-rise. We were weary with our long march, wet through and hungry, and we wanted to rest ourselves a little, and breakfast. In these public-houses you get nothing to eat except what you bring with you; and we now produced some bacon and bread and cheese, that we had purchased at Cronstadt. We ordered an okka (two bottles) of wine, and were in the act of slicing the bacon, and were intending to thoroughly enjoy ourselves, when at once two huge Wallachians, in Wallachian costume, a pistol in the girdle, a little cartridge pouch by the side, ornamented with buttons, and with a tremendous leathern whip with a short handle in the hand, entered, and began, in good Wallachian style, to flog away at my two comrades, who sate in full activity in front of the table. They were startled with such a morning salute. I held myself backward behind the table; but it whizzed in my ears, and my heart beat like a drum. At length I took courage, and as six years before I had learned a little Wallachian in the country, I asked the men what was the meaning of this; they said it was because we had not stayed at their call and shown our passports, and they threatened to drive us back again over the frontier if we made any opposition. For this, however, we had not the slightest desire, but the most profound respect for the frontier authorities, as we knew pretty well how things would have gone before them. I, as a Prussian, had less to fear, but my companions, as Bohemians and Austrian subjects, had more cause of dread from this unauthorized entrance into a foreign country. When the Wallachians had become somewhat quieter, we ordered them an okka of wine, and begged them to let us proceed. But that availed nothing, till we at length began to show money, and bargained with them for about a dollar-and-a-half; this was their weak and assailable side, as is the case universally with the Turkish officers: they finally let us go. This was pretty well for a second Wallachian welcome; on the former occasion we were spectators, this time we were actors. Our appetite for breakfast was tolerably settled, but this was only the beginning, the real misery came speedily upon us. The brooks had everywhere overflowed the ways, and bridges, as already observed, there are none. The heavy loamy soil was thoroughly soaked; we had a regular water road, through which we must march to the feet of the mountains. Six years before it was in autumn, the roads were good enough for us to drive; now we were compelled to go on foot, and had to wade seventy times through the water, now up to the knee, now to the waist, now the arms, with an occasional change up to the knees in mud. Thus it continued up hill and down for five successive days. We were never dry the whole day through. In the last water, I had nearly left my modicum of life thus far from home. It was a strong stream. I attempted it twice, and arrived safely at the middle of the current; but here the flood rushed so rapidly upon me, that the water was up to my throat; and I was obliged to retreat again. Had I been but a little taller! My comrades, who were of greater stature and strength, were finally obliged to come to my assistance, and thus I was brought through, after many unsuccessful endeavours. We were all wet to the skin, even our clothes in our knapsacks were soaked through, and made a sorry appearance. Besides this it was in December, and extremely cold. All was already very winterly, and the mountains around covered with snow. If it had but been summer, then the water-pilgrimage might have made us sport; but now we were obliged to go on in our wet clothes till evening before we reached an inn, and could dry us a little. Fortunately we obtained something warm, which in this part of the country, where the bakers only have fire, is a rare chance. We stretched ourselves after this adventurous and painful pilgrimage comfortably out in the warmest places; for after the many cold water baths we were somewhat watery, or rather quite out of spirits. We had a quarter of lamb roasted, and did not delay to empty some okkas of wine. This gave us again some comfort and refreshment. One of our companions only, in whose memory the flagellations and the toils of this extraordinary journey had left too vivid impressions, was become quite cast down, and wished that he had been dead rather than he had undertaken this expedition. For my part I continued in good health, and endeavoured to encourage and enliven them. I knew well that coin and courage can carry you through the whole world, that it would yet go better with us."

Of the manner in which the Tailor lived, when compelled to come to anchor, we have

Digitized by Google

but two notices; the first taken at Constantinople :—

"Our guide was the shoemaker already mentioned, from Vienna, who had been already in Galata and Pera. In Pera we turned into a Greek inn, where many Germans met, and were kindly greeted by them. For the rest, it was not very inviting here, but somewhat dirty. The landlord was a lazy, ill-disposed Greek, and the three waiters were worthy of the master; it was a great trouble to him to get together for us our simple dinner, which consisted of soup, mutton, or rather mutton bones, and the fatherlandish broad beans. After we had passed the first night in this country, in a great rambling room on the deck of our ship, which we had hired in Brailow, in company with sundry rats and mice, and with not too much sleep, we looked about the next for work. I had the good fortune to obtain it directly with the ladies' tailor, M. Rolle, who was a Saxon: our Croatian also, a man's tailor, and the shoemaker, were equally both successful. Here, after my long journey, I sate steadily for three-quarters of a year, and worked hard. My manner of life was wholly Frankish. To breakfast and supper I had my own table; for dinner I frequented a Frankish eating-house. At set of sun the workshop was closed, and then I returned to my quarters, which I had taken in company with others of my comrades, and there supped. In summer, supper consisted of figs, melons, and grapes; in winter, of tea, coffee, ham, and bacon, which last article the Maltese export in quantities to different countries. After supper we generally remained sitting, and smoked our tschibook and conversed. In winter we worked again some hours by lamp-light."

With regard to his comforts and enjoyments at Athens, Peter Diedrich is somewhat more communicative:—

"I was astonished as the dear sounds of my mother-tongue were heard on all sides. They were the voices of my countrymen who had emigrated thither, many of them under the auspices of King Otho. We refreshed ourselves with a German dinner and a bottle of Sicyonian wine, which has a somewhat bitter taste. We then looked about us for work. We had both of us the good fortune to obtain it immediately—I with the ladies' tailor, Marksteiner, who had come hither as a soldier from Bavaria, with his family, and afterwards established himself in his profession; my companion with the man's tailor, Meyer. Before I speak of Athens, I will say a few words of my mode of life there. Here too, as in Constantinople, I hired a room with my fellow-traveller, but a room it was only, without bed, chair, or table. Beds I had no further acquaintance with. For years I had now slept on the paved ground, on boards, and frequently amongst rocks and precipices in the open air. Here, wrapped in my quilt, and with my knapsack under my head, I slept more sweetly than many a one in the softest bed. My trunk was my chair and table. Every morning I went early to the workshop, where, besides the master, four journeymen and five German girls worked. We made up only fine articles, for the most part silken stuffs; for the ladies of Athens dress as splendidly as the Grecian, Armenian, and Frank ladies in Constantinople. In the morning at seven o'clock, we had a cup of sweetened coffee with a white roll handed to us in the workshop; at noon we dined in a Bavaroise—that is, a Bavarian hotel—and paid, for three dishes, with a bottle of wine, seventy lepte, about fourpence-halfpenny; in the evening we took supper at home: but I did not spend much time in my hired room. On Sunday mornings we went to church, took a walk in the afternoon, partook in a coffee-house, on a country excursion, a glass of wine, of which the bottle cost twenty lepte, or sixteen pfennigs, about a penny farthing English, and chatted very agreeably the time away. In the evening we went to the 'Concordia,' that is, to a select society of German masters there established, their wives, and assistants, both young men and young women. The journeymen tailors and other professionists formed themselves into a theatric company, and one of my comrades was director; and sometimes an individual stepped forward and declaimed something. Occasionally a ball was given, so that side by side with good employment here pleasure and entertainment were not wanting. There were in Athens two other societies of the kind—the 'Philadelphia' and the 'Frohsinn;' but the 'Concordia' alone had its theatre."

"Such delights" seem to have "moved the mind" of Holthaus so stirringly, on retrospection, that in spite of his having become the Lion of Werdohl, on his return after sixteen years' absence, the book breaks off with an intimation, that the writer would have small objection to sit down, for life, in the kingdom of the last of the Othos. In the meanwhile, however, he has started on another journey: and some sixteen years hence, ourselves, or our literary heirs, may, for aught we know, be again called upon to admire his taste in costume, and to wonder that, observing so much, he does not tell more of those important linings to coats, waistcoats and breeches—Men.

The Chester Plays. Edited by Thomas Wright, Esq. Printed for the Shakespeare Society.

We have here a curious collection of Mysteries, formerly represented by the trades of Chester, at Whitsuntide. These rude dramas are not without interest; they illustrate the infancy of the British Stage; they are pictures of the manners and social condition of our forefathers; and they are also indexes to the amount and quality of the religious and biblical knowledge inculcated into the mass of the people in Catholic times. There appeared to have been known in Europe during the Middle Ages three varieties of religious dramas; the Miracle Play, which set forth miracles believed to have been performed by the Catholic saints; the Mystery, founded on the mysteries of the Christian Revelation; and a mixture or confusion of both. These religious plays were originally acted in the churches, and this probably continued as long as the dialogue continued to be in the Latin tongue. At a later period they assumed a more popular and secular character, and the "plaustra" of Athens reappeared in the theatrical carts and waggons of the provincial towns of England :—

"The early religious plays, in their simpler form, were played in the churches, and the scene was laid in different parts of the building. This appears from the stage-directions to some of the Latin mysteries. It is difficult to say at what time they began first to be acted on stages; but in a story taken from a manuscript of the fourteenth, but probably composed in the thirteenth century, we find an incident which seems to show that the practice of performing these plays on stages in the open air was then common, and that they were attended by crowds of people. It appears from other sources that the spectators paid for the sight: either seats were purchased, or a collection was made. At a later period we find that these stages were placed upon carts, that there were different floors or partitions to represent heaven, earth, and hell, and that very intricate and ingenious machinery must have been used to produce different effects. Masks were also used, at least in the thirteenth and fourteenth centuries."

An entertaining account is given of the dramatic machinery in demand for the representation of another and a hotter world, when the exigencies of these ancient pieces required its exhibition :—

"I have somewhere read of charges for coals to keep up hell fire; and that on one occasion hell itself took fire and was nearly burnt down. Among Mr. Sharp's extracts from the books of accounts, we find among the objects of expenditure—'Item, payd for mending hell mought, ij$^{d.}$'—'Item, payd for kepyng of fyer at hell mothe, iiij$^{d.}$'—and, 'payd for settyng the world of fyer, v$^{d.}$'"

Mr. Wright quotes from Archdeacon Rogers, who died in 1595, and saw the Whitsun Plays acted at Chester in the preceding year, the following description of the mode of performance :

"The time of the yeare they weare played was on Monday, Tuesday, and Wensedaye in Whitson weeke. The maner of these playes weare, every company had his pagiant, or parte, which pagiants weare a high scafolde with 2 rowmes, a higer and a lower, upon 4 wheeles. In the lower they apparelled them selves, and in the higher rowme they played, beinge all open on the tope, that all behoulders mighte heare and see them. The places where they played them was in every streete. They begane first at the abay gates, and when the firste pagiante was played, it was wheeled to the highe crosse before the mayor, and so to every streete; and soe every streete had a pagiant playinge before them at one time, till all the pagiantes for the daye appoynted weare played: and when one pagiant was neere ended, worde was broughte from streete to streete, that soe the mighte come in place thereof, excedinge orderlye, and all the streetes have theire pagiantes afore them all at one time playeinge togeather; to se which playes was greate resorte, and also scafoldes and stages made in the streetes in those places where they determined to playe theire pagiantes."

On the religious objects of these strange dramas, he thus observes :—

"The original object of these performances was of course to impress the knowledge of certain parts of ecclesiastical and scriptural history on the minds of the more ignorant portion of the laity. On the day of a particular saint, as for instance St. Nicholas, the minds of the auditors who attended on his commemorative service were edified by a scenical representation of some one of his miracles: while on a great feast day, Christmas, Easter, Corpus Christi, &c., the mysteries of the New Testament were equally appropriate."

No doubt, when the churches ceased to be the theatres, and when the plays were no longer written in Latin, but in the vernacular tongue, their serious and instructive character was considerably modified by the introduction of mirthful matter and the mixture of grotesque characters with those of Scripture history. We remember to have seen some specimens of French Mysteries where the drollery is of a most licentious character; such, for instance, as the following address to St. Peter :—

Prends ton chapeau et ton épée
Et suis-moi en Galilée.

In the plays before us, there are not many gross expressions put in the mouths of divine personages; in general, the buffooneries are reserved for devils, or for altercations between Cain and his Man, or Noah and his Wife, with whom the writers possibly conceived that they were entitled to take some little freedoms. We cannot give a better specimen of these productions than a passage or two from Noah's Flood, enacted by the "Water Leaders and the Drawers of Dee :"—

Noye.—Nowe in the name of God, I begyne
To make the shippe that we shall in,
That we maye be readye for to swyme
At the comings of the fludde:
Thes bordes heare I pynne togeither,
To beare us saffe from the wither,
That we maye rowe heither and theider,
And saffe be from the fludde.
Of this treey will I make the maste,
Tyed with cabbelles that will laste,
With a saile yarde for iche blaste,
And iche thinge in their kinde:
With toppe-castill, and boe-spritte,
Bouth cordes and roppes I have all mette,
To sayle fourth at the nexte weete,
This shippe is att an ende.
Wyffe, we shall in this vessell be kepte,
My children and thou I would ye in lepte.

Noyes Wiffe.—In fayth, Noye, I hade as leffe thou slepte!
For all thy frynishe fare
I will not doe after thy reade.

Noye.—Good wyffe, doe nowe as I thee bydde.

Noyes Wiffe.—Be Christe! not or I see more neede,
Though thou stande all daye and stare.

Noye.—Lorde, that wemen be crabbed aye,
And non are meke I dare well saye;
That is well seene by me to daye,
In wittnesse of you ichone.
Good wiffe, lett be all this beare,
That thou maiste in this place heare;
For all the wene that thou arte maister,
And soe thou arte, by Sante John!

Again, where the same patriarchal pair are made to swear very profanely, the lady being

further guilty of an absurd anachronism in the oath she raps out:—

Noye.—Wiffe, come in: why standes thou their?
Thou arte ever frowarde, I dare well sweare;
Come in, one Godes name! halfe tyme yt were,
For feare leste that we drowne.
Noyes Wiffe.—Yea, sir, sette up youer saile,
And rowe fourth with evill haile,
For withouten fayle
I will not oute of this towne;
But I have my gossippes everyechone,
One foote further I will not gone:
The shall not drowne, by Sante John!
And I maye save ther life.
The loven me full wel, by Christe!
But thou lett them into thy cheiste,
Elles rowe nowe wher thy leiste,
And gette thee a newe wiffe.
Noye.—Seme, sonne, loe! thy mother is wrawe
Be God, such another I doe not knowe! * *
Noyes Wiffe.—Seme, goe againe to hym, I saie;
I will not come theirin to daye.
Noye.—Come in, wiffe, in twentye devilles waye!
Or elles stand their all daye.

The fair antediluvian, soon after, gives Noah a box on the ear, which must have been a most edifying spectacle to the pious play-goers of old Chester:—

Noyes Wiffe.—That will I not, for all youer call,
But I have my gossippes all.
Sem.—In faith, mother, yett you shalle,
Wheither thou wylte or note.
Noye.—Welcome wiffe, into this botte.
Noyes Wiffe.—Have thou that for thy note!
Noye.—Ha, ha! marye, this is hotte!
[It] is good for to be still.

In the 'Histories of Lot and Abraham,' played by the Barbers and Wax-chandlers, there are some rude verses, by no means destitute of poetical merit. There is some tender beauty in the following dialogue:—

Abraham.—Ah! Isaake, Isaake, I muste thee kille!
Isaake.—Alas! father, is that your will,
Your owine childe for to spill
Upon this hilles brinke?
Yf I have treaspasede in anye degree,
With a yarde you maye beate me;
Put up your sorde, yf you wil be,
For I am but a childe.
Abraham.—O, my deare sonne, I am sorye
To doe to thee this greate anoye.
Godes commaundmente doe muste I,
His workes are ever full mylde.
Isaake.—Woulde God my mother were here with me!
Shee woulde kneele downe upon her knee,
Prainge you, father, if yt maye be,
For to save my liffe.
Abraham.—O! comelye creator, but I thee kille,
I greve my God, and that full ylle;
I maye not worke againste his will,
But ever obediente be.
O! Isaake, sonne, to thee I saie,
God hath commanded me to day
Sacrifice, this is no naye,
To make yt of thy bodye.

In the Play of 'The Shepherds,' the "fourth boye" presents the heavenly babe with his nut-hook, in the following quaint lines:—

The Fourth Boy.—Nowe, childe, allthough thou be comon from God,
And be God thy selfe in thy manhoode,
Yet I knowe that in thy childehoode
Thou wylte for sweete meate loke,
To pull downe aples, peares, and plumes,
Ouide Joseph shall not nede to hurte his thombes,
Because thou hast not pleintie of crombes,
I geve thee heare my nutthocke.

In the early stages of the Reformation in England, the influence of the drama was wielded on both sides of the great religious quarrel of the day. The "gospellers" attacked what they called the "superstitions and idolatries" of the Church of Rome, as the Romish clergy assailed the gospellers and their new doctrines, from the dramatic no less than from the ecclesiastical pulpits. Mr. D'Israeli makes some amusing quotations, where chapter and verse are cited in a play, as formerly in a sermon or homily:—

Read the V. to the Galatians, and there you shall see
That the flesh rebelleth against the spirit.

And—

I will show you what St. Paul doth declare
In his Epistle to the Hebrews, and the X. chapter.

Impressions, Thoughts, and Sketches, during two years in France and Switzerland. By M. M. Lamont. Moxon.

This last beater of the most beaten tracks of Europe, has peculiarities which distinguish her from her predecessors. Something of character peeps through Miss Lamont's notes on Parisian literature, and raptures at Nature's magnificence in Switzerland. Her French sketches, for instance, are taken *en pension:* and though a praiseworthy discretion has been observed, the speculator on female education will thence glean some details as to the boarding-house and boarding-school life of the French metropolis, which may be useful and new. Miss Lamont's criticisms on the books she has read, too, betoken a clear head and a wholesome taste; though we cannot acquiesce in the wisdom of her recourse to two of Balzac's novels by way of learning somewhat of French society: or in her naming George Sand at all, if not a single book of that author was worthy to be read. But if the volume contains scintillations of Puritanism, it also inspires us with a rather unusual impression of conscientiousness, disposing us to expect better efforts in good causes from the writer, when the mind shall have matured itself, and the subject is better chosen. It appears that Miss Lamont is a connexion of Marshal Macdonald's: and we shall make room for an anecdote gleaned at one of the veteran's *soirées*. The conversation began with some recent political persecutions:—

"Some of the gentlemen spoke of transportation as their sentence, and then of the place to which they were to be transported; this led to the subject of certain transportations under the Reign of Terror. Old times, interesting ones to me, were spoken of, and Dumourier came on the tapis. Shall I say that I was interested, or amused, or made sad, by the description of his two female aides-de-camp? Perhaps I experienced a little of all three feelings. These two were sisters; they dressed always in male attire, and took part in many bloody battles, one of them frequently acted as secretary to Dumourier. Colonel de ——, who entered the army at fifteen years of age, resembled at that time one of these demoiselles so much in appearance, that her father when he went to see her at the camp frequently mistook him for his daughter, from which circumstance, the young man contrived to make some amusing scenes. He told me, that the elder of the two had much more spirit and presence of mind than the younger; that the latter had been once offended by some insolence on the part of an officer, which the former did not think she resented sufficiently, so that she, herself, challenged him, and obliged him to make an ample apology to her sister. After the revolution of July, this lady came up from the country, and presented herself at the court of Louis Philippe, to remind him of those *pleasant* times, when he and she fought under Dumourier for the republic—in truth, to try to obtain a pension from her ancient royal companion in arms.—I do not know whether she did obtain it or not; but Marshal Macdonald related with much humour his meeting with her at court, and recognizing her. Nothing is more delightful in him, than the happy humour with which he tells anything, in which the ridiculous is mingled, he enjoys a pleasant jest, even a boyish trick, with the gaiety and simplicity of a child. On another occasion, when I was at his house, the conversation turned on Walter Scott's Life of Napoleon. As was to be anticipated, many of the gentlemen present who had served under the emperor, condemned it altogether; Marshal Macdonald, however, defended it, in so far that it had done justice to the valour of the French army. He then related to me that when Sir Walter was in Paris, collecting materials for his book, he had visited him, he having had an introduction from some Scotch friend of his. He told him many anecdotes of Napoleon from his own personal knowledge, and desired him to make a note of them, but Sir Walter replied that he could trust to his memory. 'None of those traits which I related to him did I find in his work,' he added. Scott was very far from possessing fluency in French conversation, and seemed only to understand what was distinctly spoken and addressed to himself; this deprived him of the power of making use of much that would have given life to the character of his hero, amidst the long historical details. Marshal Macdonald invited to meet him at dinner all the distinguished persons who had known Napoleon most intimately; every one was eager and happy to tell Sir Walter something of their great master; but he, overwhelmed and confounded amidst their French vivacity, and driven to despair by the volubility of their foreign tongues, told the Marshal afterwards that he had actually not understood a single word that was said about the emperor during the whole evening. And thus the good-natured attempts to get him the best information *à vive voix*, ended in a hearty laugh on the parts of both host and guest; both, with all their great talents, equally endowed with a happy disposition for enjoying the amusing and the ludicrous."

The poetry in this volume appears to us the work of one taught, rather than gifted: and we say this explicitly, because it is of importance that an honest-hearted and sensible writer of promise should not be deluded into mistaking the direction of her powers.

Architectura Canonica; or Canons of Church Architecture. By Philecclesius Ignotus, M.E.C. Rivingtons.

It never rains but it pours:—here we have another little manual relating to Church Architecture, as if that branch of the art had all at once become a familiar pursuit, and there was a demand for—'Every Man his own Church Builder'—to teach gentlemen to rear churches as they do melons and pine-apples. The *forcing* system has certainly been adopted with reference to this subject. Of course there must be a beginning—still the *festina lente* ought to be attended to, otherwise a mere feverish excitement will be got up by dint of bustling and vapouring, which, in a short time, will subside as quickly. We give Philecclesius credit for good intentions, but are of opinion, that the 'Architectura Canonica'—not singular in that respect—is calculated just to teach people a smattering of the subject—perhaps to intermeddle mischievously where entire ignorance would have deterred them from obtruding their opinion. "We have here a nice little book that tells us all about it," and forthwith people go on blundering, never suspecting how infinitesimally small is that "all," on the strength of which they presume to offer counsel and advice. In this instance, the writer attempts scarcely more than a succinct and formal enumeration of the different parts of a church, the original names bestowed upon them, and the usual arrangement of Primitive Christian churches, exemplified by the plans of St. Clemens and San Lorenzo at Rome. So far is he from attaching any importance to symbolism, that he actually rejects what has ever been considered one most significant and obvious point in it, namely, the *cruciform* plan. Instead of this, he recommends, for modern churches, a return to the primitive Basilica form—a simple parallelogram divided into nave and aisles by columns, with the original semicircular tribune in lieu of chancel; which last idea alone will horrify the Camdenists and other like reformers of our church architecture. Even were there objections of no other kind, there would still be one difficulty, and that no small one—the adoption of the Basilica form would require some due correspondence of character in other respects. Hardly would it be suitable for the Gothic style; but that the writer does not take into consideration, for he is, in fact, silent as to that style, and only leaves us to infer, that he does not altogether exclude it, by recommending the parallelogram as the *cheapest* form, and Grecian or Roman as the *cheapest* style. In some quarters, this advice will be responded to by groans mingled with anathemas. It will be thought to partake of downright Paganism—for there are still some who, regardless of Symbolism, Spiritualism, and Christianism of style, entertain a hankering after that Anglo-Italian style for churches, which was brought into vogue by Wren and his immediate successors.

To us, it appears somewhat strange that

Digitized by Google

Philecclesius should have made no mention of the new Basilica at Munich, by Ziebland; for hat he has visited that city, is beyond doubt, because he speaks in terms of the highest admiration of the painted windows "executed under the eye of that magnificent artist Herr Hesse, whose designs and colours in glass fling all ancient and modern glass into obscurity." To which he adds—

"I may, perhaps, give offence to national vanity in making this statement, respecting the stained glass at Munich, but let those, who take offence, go to Munich, and they will see how Sculpture, Painting, and Architecture are flourishing under the fostering munificence of the present King of Bavaria; and as to stained glass there, if they look to the perfection and brilliancy of colour in all the varied hues of the rainbow, the beauty of the designs, and the anatomical correctness of the figure drawing, the intellectual and characteristic expression of the features, the venerableness of age, the splendour of manhood, the loveliness of the women and children, and the celestial air of the angels, they will, I think, with me then admit that the genius of Herr Hesse (Hess), and the labours of his artizans defy competition."

This glowing eulogy smacks of Germanomania,—and we very much question whether Herr Hesse's works would be altogether relished by some of our antiquarian connoisseurs.

From what has just been quoted, it must not be supposed that Philecclesius says much on the subject of painted glass and of windows, the above being, in fact, all, and introduced as an apology for recommending that Hesse should be employed to design windows of the kind for the east end of St. Paul's; which building, he further suggests, would be greatly improved, were the organ and screen removed, and the area beneath the dome united with the choir; which being done, it would probably be found that a preacher would be inaudible to the majority of the congregation.

He does not much help us in regard to what has ever been a *crux architectonica* in Protestant churches,—the position of the pulpit. This should naturally be midway at the chancel or altar end, so that the preacher would directly face the congregation, and be better seen and heard. Yet this must not be: a clergyman is not a Janus; therefore if he turns his face towards the congregation, he must, for want of a second face, turn his back upon the altar, which would of course be irreverent and indecent. Some may think that in such case necessity would warrant what would else be improper, and that there could be no actual irreverence where none was intended. Even the rigorous strictness of court etiquette gives way to physical necessity; and when Royalty goes in state to parliament, the coachman turns his back, and the horses their tails, upon Majesty; nor do the most courtly or the most loyal seem to be at all scandalized at such a piece of indecency. A side position is certainly an inconvenient one for the pulpit, both architecturally and otherwise; yet, if the obvious remedy be considered far worse than the inconvenience, the latter must continue to be put up with.

In one respect, Philecclesius is rather prodigal of architectural hints and suggestions, for he gives us ten skeleton plans of churches, accommodated to difficult and irregular sites, so fantastically irregular, in fact, that they would never, by any chance, be selected for the purpose. As to one point, these plans are all strictly orthodox, for, in every one of them, the altar is placed due east, but then it sometimes comes on the *side* of the building, and even there not always in a central position. In their general forms, too, these plans are exceedingly whimsical: one of them shows an isosceles triangle, with its apex or sharp point at the west-end cut off for an entrance there; another gives us a very long and narrow ill-shaped oval; and the rest may fairly be set down as nondescript. It is strange, that such out-of-the-way conceits and vagaries should be brought forward by one who shows more than ordinary good sense on particular points; as, for instance, where he recommends that a fine interior should be preferred to a fine exterior:—

"When funds cannot be had for fulfilment of both objects, the interior should invariably become the grand object of the architect's best efforts, and no architect will succeed here, who has not a knowledge of pictorial as well as architectural effect. I pity the people who, being in the hands of a commonplace architect, lavish their hundreds in adorning the outside of their edifice with pinnacles, flying buttresses, canopied niches, sculptured corbels, and all the *et cetera* of Florid Gothic, but after all, have an area within, of which the most that can be said of it is, that it is neat and vastly commodious. It should be both, but it should be more—it should, for an Episcopalian place of worship, on instantly entering be impressive."

These words are worth a volume; although they are likely to pass for satire with the Church Commissioners, and their architects.

Whimsicalities, a Periodical Gathering. By Thomas Hood. 2 vols. Colburn.

From the days of Alfred and Clovis, The Jester has been rated in proportion as he could show his courage in the field and his counsel at the board—though for partizan he only went out with a bauble, and in place of harangue he but vented some two-edged speech, which rang merrily in the ear, while it cut deep into the heart. Nothing so wearisome as aimless fun; nothing so bracing and wholesome as mirth in season! There is no good nonsense without *intention*—no genuine grotesque without its prevailing idea of grace, self-coherent amid its incoherence; and the jesters and fantasy tale-weavers who mean to take a place on our library shelves must study not the jest or the whimsey for itself, but for its purpose.

Thus it is that, on running over this Gathering of Whimsicalities, we have as often laid down the page to think as to laugh. To begin with 'The Schoolmistress abroad;'—what lady of the *Crane* genus, but ought to be better (if but by a blush) for the difficulties experienced by the preceptress of Lebanon House? Yet Miss Crane is, in her way, accomplished; skilled as Arachne herself in tapestry labour:—

"Besides the hearthrug, she embroidered a chair-cushion, for a seat devoted to her respectable parent—a pretty, ornithological design—so that when the Reverend T. C. wanted to sit, there was ready for him a little bird's-nest, with a batch of speckled eggs. And moreover besides the chair-bottom——— but, in short, between ourselves, there was so much *Fancy* work done at Lebanon House, that there was no time for any *real*."

Alas! all her *stitches* avail her little, when her father aforesaid is seized with spasms at an out-of-the-way place in Prussia! No language, no experience, no common sense has she to help her on the occasion; she gropes in her reticule for her smelling bottle, and finds—the French mark; but her French does not pass current; German she has none:—and no style of fancy work avails her there. By way of bespeaking a warming-pan for her patient, she can only thrust a walking-stick into the bed, and in a medical conference she becomes yet more helpless:—

"'Et monsieur a bien dormi?' inquired the German doctor the next morning. 'Pas un—' begun Miss Crane, but she ran aground for the next word, and was obliged to appeal to the linguist of Lebanon House. 'Ruth—what's a wink?' 'I dont know,' replied Miss Ruth, who was absorbed in some active process. 'Do it with your eye.' The idea of winking at a strange gentleman was however so obnoxious to all the school-mistress's notions of propriety that she at once resigned the explanation to her sister, who accordingly informed the physician that her 'pauvre père n'avoit pas dormi un morceau toute la nuit longue.'"

Did not Heaven protect the helpless, even when they are past being amended by the teaching of Experience, the Rev. T. Crane must assuredly have been carried off to the *Friedhof*, for any aid derivable from his "ministering angels." Yet which of us that has gone a step beyond his own threshold could not illustrate by example the above picture of fashionable female cultivation?

We cannot make room even for a category of these Whimsicalities, which is the less to be regretted as they have nearly all appeared in the *New Monthly Magazine*. 'The Defaulter' is one of the Moralities. A pleasant, middle-aged, respectable clerk, the orderly current of whose habits and ideas is disarranged by the late-in-life arrival of "a little blessing" (or, in plainer English, a son and heir), is, thereby exposed to serious misconstructions. That he has embezzled, is embezzling, or will embezzle, is clear: it is only a question as to the manner of detection and term of transportation; and while they are on the rack, our author throws in an episode of universal application:—

"'Gracious Goodness!' exclaims Female Sensibility, 'and will the dear fresh-coloured bald little gentleman be actually transported to Botany Bay?' My dear Miss—a little patience. A criminal before such a consummation has to go through more processes than a new pin. First, as Mrs. Glasse says of her hare, he has to be caught, then examined, committed, and true-billed—arraigned, convicted, and sentenced. Next, he must, perhaps, be cropped, washed, and clothed—hulked and shipped, and finally, if he does not die of sea-sickness, or shipwreck, or get eaten by the natives, he may toil out his natural term in Australia, as a stone-breaker, a cattle-keeper, or a domestic servant. 'Dear me, how dreadful! And for a man, perhaps like Mr. Pryme, of genteel habits and refined notions, accustomed to all the luxuries of life, and every delicacy of the season, I should really like to set on foot a little private subscription, for providing him with proper comforts in prison and a becoming outfit for his voyage.' My dear young lady, I can appreciate your motives and do honour to your feelings. But before you go round with your book among relations, acquaintance, and strangers, soliciting pounds, shillings, and pence, from people of broad, middling, and narrow incomes, just do me the favour to look into yonder garret, exposed to us by the magic of the Devil on Two Sticks, and consider that respectable young woman, engaged at past midnight, by the light of a solitary rush-light, in making shirts at three-halfpence a piece, and shifts for nothing. Look at her hollow eyes, her withered cheeks, and emaciated frame, for it is a part of the infernal bargain that she is to lose her own health and find her own needles and thread. Reckon if you can, the thousands of weary stitches it will require to sew, not gussets and seams, but body and soul together: and perhaps, after all her hard sewing, having to sue a shabby employer for the amount of her pitiful earnings. Estimate, if you may, the terrible wear and tear of head and heart, of liver and lungs. Appraise, on oath, the value of youth wasted, spirits outworn, prospects blasted, natural affections withered in the bud, and all blissful hopes annihilated except those beyond the grave——— 'What! by that horrid, red-faced, bald-pated, undersized little monster!' No Miss—but by breach of trust on the part of a banker of genteel habits and refined notions; accustomed to all the luxuries of life, and every delicacy of the season. 'Oh, the abominable villain! And did he ruin himself as well as the poor lady?' Totally. 'And was transported?' Quite. 'What, to Botany?' No, Miss. To the loveliest part of Sussex, where he is condemned to live in a commodious Cottage Residence, with pleasure ground and kitchen-garden annexed—capital shooting and fishing, and within reach of two packs of hounds."

Next—no offence to the newly-fledged Ghost Story of "Boz"—when was there ever tale of

Digitized by Google

terror more pithy than that of 'The Grimsby Ghost?'—"a departed spirit revisiting the glimpses of the moon," and keeping a whole neighbourhood in paroxysms of terror, for the sake of a "*tuppence for sand-paper at number nine!*" which, living, the small-ware merchant had omitted to book. But—without reference to moaning or moral—commend us, in preference, to that pleasant piece of exaggeration, "Mrs. Gardiner," whose heart and soul and language are all in her flower-beds. Here she stands, in the full blow of recognition of her old acquaintance, who had known her in her married days. When living in the city, she had been compelled to narrow her horticultural propensities to—

A Persian Lilac in a tea-chest.
A Guelder Rose in a washing-tub,
A Laurustinus in a butter-tub,
A Monthly Rose in a Portugal grape-jar.

"She could not help it, she sobbed—the sight of me overcame her. When she last saw me,—*He* was alive who had always been a kind and devoted husband—as never grudged her nothing—and had given her that beautiful butter-tub for her laurustiny. She often thought of him—yes, often and often—while she was gardening—as if she saw his poor dear bones under the mould—and then to think that *she* came up, year after year—'flourishing in all her beauty and flagrance' and *he* didn't.—'But look there—' and smiling through her tears, she pointed towards the house, and told me a tale, that vividly reminded me of her old contrivances in Bucklersbury. 'It's a table-beer barrel. I had it sawed in half, and there it is, holding them two hallows, on each side of the door. But I shan't blow, you know, for a sentry!' Very handsome indeed! 'Ain't they? And there's my American Creeper. Miss Sharp pretends to creep, but Lor bless ye, afore ever she gets up to her first floor window, I shall be running all over the roof of the villa. You see I'm over the portico already.' A compliment to her climbing powers was due of course, and I paid it on the spot; but we were not yet done with creepers. All at once the Widow plucked off her garden bonnet, and dashing it on the gravel began dancing on it like a mad woman, or like a Scotch lassie tramping her dirty linen. At last when it was quite flat, she picked the bonnet up again and carefully opening it, explained the matter in two words. 'A near-wig!' And then she went on to declare to me that they were the plagues of her life, and there was no destroying them. 'It's unknown the crabs and lobsters I've eaten on purpose, but the nasty insects won't creep into my claws.'"

Such a Mrs. Gardiner as this was sure not to be left *long* without a helpmate; and, accordingly, the little old bachelor at number eight, to whom this modern Eve recommends "tobacco-water and a squiringe," thinking of her own blights, while her neighbour is discussing *his* rheumatics, carries off the prize. In nothing, by the way, are these 'Whimsicalities' more whimsical than in the specimens of love-making they contain. Very moving is the case of the angling bachelor, Mr. Chubb, fished for and caught by the pretty widow—the lady in pursuit, like *Constance* in 'The Love Chase,' affecting the most lively enthusiasm in all Waltonian pleasures. But, unlike Izaak, she could not hook her bait "as if she loved him," and fishes with hard dumpling. Mr. Chubb's sports are disturbed by this, and he ventures to hint—

"Nothing like paste, ma'am—or a fly—if it was not a liberty, ma'am, I should think you would prefer an artificial fly. 'An artificial one!—O, of all things in the world!' exclaimed the lady with great animation. 'That cannot feel!—But then'—and she shook her beautiful head despondingly—'they are so hard to make. I have read the rules for artificial flies in the book,—and what with badger's hair, and cock's cackles (she meant hackles), and whipping your shanks (she meant the hook's), and then drubbing your fur (she meant dubbing with fur), O, I never could do it!' Mr. Chubb was silent. He had artificial flies in his pocket-book and yearned to offer one—but, deterred by certain recollections, he shrank from the task of affixing it to her line. And yet to oblige a lady—and such a fine woman too—and besides the light fall of a fly on the water would be so much better than the flopping of that abominable great green and white float!—Yes, he would make the offer of it, and he did."

The fly, of course, settled the question, and caught the Gudgeon.

We can do little more than advert to the China Correspondence, as perfect *Howqua* of its kind. Crusty Uncle Abel's comments upon the gifts and graces of his scape-grace relative, is a pretty fair comment upon the "ingenuous youth" of to-day and yesterday:—

"Which reminds me if you want his picter in his absence, there's the very moral of him, in old Snitch's the tailer's winder, drawn and cullered at full lenth, as a sample of the last ally mode. I mean the one a switching a little refined lickerish boot as no man with a grate Toe could get his foot into. He's the very immage! Now in my yunger days a respectabel yuth was content with a decent coat and hat, and provided he could go into church with a clean shirt, well blackt Boots, and a pair of unholy gloves. But them was plain Johns, not dear Gusses. As to his goold Watch its like his impudence when his Uncle have gone through life with a Pinchback—and whats more never had a Watch at all till five and twenty. The Cock was my Crow-nometer. Four in summer and six in winter from years end to years end. But I supose erly risin was none of my Nevy's habbits, and till 12 or 1 he would have been letting himself down by getting up. The later the genteeler,—and I have herd of one fashionable religius lady in Lonnon who always got up singing the Evening Hym. However thats your way of bringin up, namely to give a sun his own way in every thing, which being a very take it esy stile of edicating to my mind hardly justifies a Parent in bragging of it so much as she do in your letter."

'The Happiest Man in England,' and the 'Undertaker,' are a capital pair of portraits, "each giving each a double charm" by their near neighbourhood. 'Diabolical Suggestions' tempts us to that cloud-land betwixt the visible and the invisible, which Hood has wholly to himself among English authors; and is full of the subtlest, strangest poetry, which a hundred will understand who could never have uttered it either in print or parlance. 'The Confessions of a Phenix,' and the 'University Feud,' are more directly aimed at recent events—the one at false rumours of their own deaths, connived at by the Sir Condy Rackrents of Philosophy or Politics; the other at the unpoetical contention for the Poetical Professorship, at Oxford. But we must have done; leaving, nevertheless, our work only half complete, so far as making out a catalogue of these 'Whimsicalities' is concerned.

Report of the Select Committee on Postage, together with the Minutes of Evidence. Printed by order of the House of Commons.

Among the records lately exhumed from the dark and almost inaccessible vaults of Somerset House, are a number of accounts of the "Masters of the Postes"; and it appears that there is every probability that a series of such accounts, from the earliest to the latest periods, will be forthcoming, when the Pipe Office Records are sorted and arranged,—a work likely, it is said, to occupy many months. Of these "Postes" accounts very little, if any, use can have been made at any time for any antiquarian or historical object, for we believe that they are not specifically mentioned by Madox or other writers on the Exchequer, or noticed in the reports on Public Records; and it may be doubted if they have been consultable at all for the last century. They promise, however, when arranged, to furnish materials for a complete history of the Post Office, and with the help to be obtained from the Early Wardrobe Accounts of the Royal Household, to enable us to trace with great accuracy the modes of, and facilities for, the conveyance of correspondence throughout the kingdom, from the reign of Henry III., when the messengers were styled the "Nuncii Regis," and provided, as our letter carriers are at the present day, with a royal livery. Hereafter we may, perhaps, find occasion to speak of these Records when arrangement has rendered them more accessible. For the present, as apropos of some points in the Report just published, and the public interest which is reviving in the subject, we shall briefly examine one of the series, a roll of the "Master of the Postes" for the reign of Queen Elizabeth. The contrasts between the arrangements for the despatch of the public correspondence at that time and those which we enjoy at present, afford a curious exemplification of the difference between the public exigencies of the two periods.

In the reign of Elizabeth, and indeed until the period of the Commonwealth, there was no public provision made for the general correspondence of the nation,—a sure sign that the correspondence itself was not very extensive or important. Oliver Cromwell was the first person to feel the letter-writing wants of the people, and to give them a General Post Office. Before his time, posts were established to answer only the wants of the government. In the roll of the "Master of the Postes" already alluded to, the accountant is allowed for money paid by him for the wages and entertainment of the ordinary Posts, as well at the court and between London and Berwick, as between Berwick and Carlisle and other places within the realm, "for *conveyances of Her Highness's letters and her Councils*, and for other her Majesty's service, at sundry rates by the day as the importance of their service requireth." Possibly these government Posts carried also some private correspondence, but it was no recognized or declared arrangement. The Posts were considered as ordinary and extraordinary. The ordinary Posts laid between London and Berwick in the 15th year of Elizabeth were as follows:—Posts of London, Waltham, Ware, Royston, Caxton, Huntingdon, Stilton, Stamford, South Witham, Grantham, Newark, Tookesford (Tuxford), Scroby, Doncaster, Ferrybridge, Wetherby, Boroughbridge, Northallerton, Derneton (Darlington?), Durham, Newcastle, Morpeth, Hexham, Hawtwistle, Carlisle, Alnewick, Belford, Berwicke. For three centuries the High North Road, until the age of railroads, took in all these "Posts" (excepting Tuxford) as Post Towns as far as Durham. And though a diversion westwards appears to have been made to Carlisle—there was probably also a direct route from Morpeth to Alnwick.

The ordinary Posts laid towards *Ireland* during Elizabeth's reign are set forth in different routes and different details. Route 1. London, Dunstable, Dayntry (Daventry), Collsill (Coleshill), Stone, Chester, Liverpool. Route 2. London, St. Albans, Stony Stratford, Daintree (Daventry), Coventry, Coleshill, Lichfield, Stone, Nantwich, Westchester, Rutland (Rhudlan), Beaumarais, Conway, Holyhead. Route 3. (A. D. 1603). London, Barnett, St. Albans, Brickhill, Toxetter, Daintree, Coventry, Bremycham (Birmingham), Bewdlay, Ludlow, Coleshill, Lichfield, Stone, Nantwich, Chester, Northup, Rhudlan, Conway, Beaumarais, Holyhead.—Posts laid towards Ireland between *London and Tavistock* were at London, Staines, Hartfordbridge, Basingstoke, Andover, Salisbury, Shaftsbury, Sherborne, Crockerne, Honiton, Exeter, Crediton. *Posts laid between London and Bristol.* 1. London, Maidenhead, Newbury, Marlborough, Chippenham, Bristol. 2. London, Hounslow, Maiden-

Digitized by Google

head, Reading, Newbury, Marlborough, Chippenham, Maxfield, Bristol.

Posts between London and Dover. London, Dartford, Gravesend, Rochester, Sittingborne, Canterbury, Margate, Sandwich, Dover.

The preceding are stated to be the posts between London and Dover, but it is more likely that there was a direct route from Canterbury to Dover than a circuitous one through Margate and Sandwich.

The foregoing seem to have constituted what are termed the "ordinary Posts" during Elizabeth's reign. These Posts may be regarded probably as the permanent arrangements for the transmission of the correspondence of the government, and with a map before us, we may see how difficult must have been anything like a general communication in the cross-roads and bye-ways of the kingdom.

When letters were to be transmitted elsewhere than by these routes, "Extraordinary Posts" were established. The following is the arrangement for extraordinary *Posts between London and Plymouth*, in the 36th year of Elizabeth. 1. London, Staines, Harford, Basingstoke, Andover, Salisbury, Shaftsbury, Shirborne, Crockerne, Honiton, Exeter, Ashburton, Plymouth.

Here are some further extracts relating to the extraordinary Posts:—

"Thomas Milles, gentleman, sent in haste by special commandment of Sir Francis Walsingham, Knight, principal secretary to her Majesty, throughout all the Posts in Kent, to warn and take order, both with the Posts for an augmentation of the ordinary number of horses for the packet; and with the countries neer them, for a supply of twenty or thirty horses apicce for the 'Throughe Postes' during the service against the Spanish Navy by sea, and continuance of the armies by land for his service sustained in that service, 4*l.*"

Posts were laid (a° 31 Eliz.) between London and Rye, upon the slaughter of the late French King, for the more speedy advertisement of the same out of France as occasion from time to time did require:—

"Thomas Milles, sent at Easter 1597, from London to lay the Posts and likest landing places in Kent and Sussex, upon intelligence given of some practises intended against her Majestys person, and returning back, received 7*l.*"

The Extraordinary Posts laid between Hampton Court, and Portsmouth, and Southampton, for the more speedy advertisements of the occurrences from the ports of Normandy and Bretaigne, from the French King, and of divers other causes concerning her Highness' special affairs,—were, Kingston, Guildford, Farnham, Alton, then by Eastmeane to Portsmouth, and by Twyford to Southampton.

"Thomas Gourley, Post of Canterbury, received for his expences and travail in conveying from Margate to Oatlands a mail intercepted, wherein were inclosed letters and pardons sent from the Pope, 4*l.* in all."

Here is evidence of the first beginnings of a Packet Station at Holyhead in the expenses for the "Hire of a bark at Holyhead for the more speedy conveyance of her Majestys and her Councils letters into Ireland, and of letters to be sent hither from thence."

Anterior to the 31st year of Elizabeth's reign the "Carriage of packets of her Majestys letters was paid at the rate of 20*d.* the packette between one Post and another," but after that time the allowance accustomed to be paid by the packet, was reduced to rates per day varying between 3*s.*, 2*s.*, 20*d.*, 18*d.*, at various posts—an arrangement which would have led possibly to the adoption of an uniform rate if each packet had been charged with its expenses.

The sum total of expenses of all Posts for five years, from the 8th to 13th Elizabeth, was 4,764*l.* 18*s.* 6*d.*: for one year (a° 29) it was, 1,175*l.* 9*s.* 4*d.*

The obvious advantages which would result from the employment, by the public at large, of the posts thus established for government objects only, no doubt induced the government to undertake the business of carrying its subjects' correspondence. The government posts became the basis of the present Post Office trade, and the object which, at an early period was professed, doubtless in good faith, in undertaking such a business, was the accommodation of the public, and by no means any profit to the revenue. The earliest statutory enactment (12 Charles 2) recites that, "Whereas for the maintenance of mutuall correspondencies and prevention of many inconveniences happening by private posts, severall publique post offices have been heretofore erected for carrying and recarrying of letters by posts to and from all parts and places within England, Scotland, and Ireland, and severall parts beyond the seas, *the well ordering whereof is a matter of general concernment and of great advantage, as well for the preservation of trade and commerce as otherwise,*" &c. By the same statute, rates of postage were established, assessable at per sheet, according to distances, under or above eighty miles. Thus, "For the post of every letter not exceeding one sheate, to or from any place not exceeding fourscore English miles distant from the place where such letter shall be received, two-pence, above the distance of fourscore miles, threepence." Thus, in the earliest period of the institution, we have an approximation to two of the main features of Mr. Hill's plan—public convenience and uniformity of charge. So little, too, was revenue thought of, that the various posts appear to have been farmed from year to year for a long period, at the same rates:—

"Way letters taken in at one stage and delivered at another this year (1680), farmed to divers postmasters for the severall sums within mentioned,

"Mrs. Frances Goldmith, of Lynn, 20*l.*

"Mr. Edward Holland, of Manchester, C*s.*

"Mrs. Mary Rathbone, of Litchfield, C*s.*"

Thus, in less than two centuries, the annual expenses of the Post Office at Manchester have risen from 5*l.* to nearly as many thousands.

Gradually, however, and most particularly during the pecuniary emergencies occasioned by late wars, the State looked more anxiously to the Post Office as a source of revenue, than as a public convenience. So far was this feeling carried out, mistakenly even for the interest of the revenue, that a re-action ensued, even after Palmer's great improvements; and whilst population continued to grow, and public requirements for post office facilities increased, the post office revenue not only stood still, but positively declined. In the midst of the general standstill of the Post Office appeared Mr. Rowland Hill, and he proposed a plan which went to the total subversion of all the past system. Cheapness and activity were to take the place of costliness and torpitude. By adopting Mr. Hill's plan, the government placed itself in the position of a trader, who declared that he intended in future to be satisfied with a sixth of his former profits, but hoped to secure himself from loss by increased business, greater attractiveness, and diminished cost of management. The step was a bold one, and yet not hazardous, if efficiently prosecuted, for the principles themselves are sound. Yet no half measures, with such a system, suffice. Bankruptcy assuredly would stare that man in the face who should simply make a reduction in his price of several hundreds per cent., and make no improvements in the machinery for transacting his business. The Post Office, it is alleged, have so acted—made the reduction, but done little else. Yet Penny Postage will not, perhaps, be said to have ruined the Post Office, so long as it yields some 600,000*l.* per annum as net revenue; that it should not have become bankrupt under the enormous reduction in charge, to which it was subjected, does not result from the improved mode of working of the new plan, which Mr. Hill alleges is yet but half tried.

Into the truth of this allegation it was the object of the Committee, whose Report heads this paper, to inquire; and though it inquired to the extent of asking some 3,243 questions, and of filling some 600 pages, the Committee appears to have declined exonerating the Post Office from the charges laid against it by Mr. Hill. The Committee divided on the question, whether judgment should be pronounced or not: it decided in the negative; and thus has left the public to form its own conclusions on the subject. These it is much more likely to obtain practically, from its own experience, than from the thick "blue-book," the very dullest and dryest of blue-books, it was ever our fate to peruse.

The public hardly requires to be told, that Mr. Rowland Hill's plan has not hitherto afforded it much besides the comfort of cheapness, some simplicity in charge, and the convenience of stamps. Increased facilities there have been very few. Colonel Maberly being asked what additional facilities had been introduced since 1841, by which the public have been induced to use the Post Office more than they did before that time, says that there have been some; but "I tell the honourable member fairly, that there have been comparatively few" (1035). Elsewhere, he says, that the introduction of the Penny Post led to stopping the progress of establishing rural post offices (1052). In London, too, we know it has curtailed the time of posting letters, and rather retarded the delivery. Yet not only for public benefit, but as the only means of improving the revenue, are increased facilities more than ever indispensable.

Putting aside all financial considerations, it will appear obvious, that if the State assumes to itself the monopoly of being the national carrier of its subjects' letters, the public has a right to insist, that the work be done as well as if it performed it for itself. Giving the Post Office all the credit for the facilities which have been gradually introduced in late years before the advent of the Penny Post, it must still be confessed by every one, resident either in town or country, that there are glaring defects and inconveniences in the Post Office arrangements, which come within his own personal experience. In the metropolis, for example, the transit of a letter, from one district to another, is unnecessarily tedious. In spite of remonstrance from commissions, from committees, and demonstrations from Mr. Hill, the Post Office continues to insist, that if a letter is posted in Grosvenor Place to go to Knightsbridge, the only proper course of the letter is to go first three miles eastward, to St. Martin's Le Grand, wait there for a certain time, and then return past Grosvenor Place to its destination. This practice, however, is surrounded by anomalies, for though the Post Office will not establish districts for circulating letters within the metropolis itself, it does so in certain parts of the suburbs. The general result of the present system is, as stated by Mr. Hill, that "the interchange of letters by the district post is so slow, that special messengers are employed by the public whenever dispatch is important. The time ordinarily required to send a letter and receive a reply, between one part of London and another, is about seven or eight hours, and between London and the suburbs, ten or eleven hours, even when night does not intervene; but in the latter part of the day, letters for the suburbs are still more unreasonably delayed. A letter for Bayswater, if posted at ano rdinary receiving house after four o'clock,

Digitized by Google

is not delivered till next morning; and as the reply, even if immediate, would not be delivered till about one, P.M., the intervening time would, in extreme cases, amount to twenty-one hours."

The remedy proposed by Mr. Hill is, to make the "collection and delivery of letters once an hour, instead of once in two hours, and to establish district offices, so as to avoid the necessity of making all letters pass through St. Martin's-le-Grand, and the result would be, that the time necessary for an interchange of letters would be reduced by one-half, and the benefit would be attended with little additional expense. The Post Office interpret this proposed hourly delivery of letters to mean a delivery of a letter within an hour of its being posted, and then such a plan is sagaciously pronounced a "physical impossibility;" and Colonel Maberly labours to prove, and *does* actually prove, that the transmission of a letter from Pimlico to Whitechapel will indeed take more than an hour (847). Subsequently, a new light struck him that he had misunderstood the proposal.

Although the illicit conveyance of letters for the sake of evading postage may be said to have been altogether stopped, it seems to be generally admitted, that the law is still broken to save time. Whilst trains are going and returning some half a dozen times in the day to Birmingham, Bristol, &c. letters are sent by the Post Office only twice. Many letters are conveyed by these trains as parcels. It cannot surely require demonstration, that if the public want their bodies carried six times a day to Birmingham, they no less require an equal amount of convenience for the transmission of their thoughts. Our own experience has led us to observe, that the stations on railways are already made private post offices. During the summer we happened to be located near a railway, where the Post Office communication with the metropolis was at an inconvenient hour, and occurred but once a day. The facilities for communicating with London occurred some dozen times by the railway. Consequently a great part of the correspondence of the place passed by the railway, and it seemed to be a practice to leave stamped letters at the station to be carried by the first train. Now it would be a very simple and cheap convenience for the Post Office to cause a letter-box to be placed at each station for the receipt of stamped and unpaid letters, to be sent unostentatiously by each train, and such an arrangement would certainly provoke much increased correspondence.

But perhaps the most glaring defects of the Post Office arrangements, is the want of accommodation in the rural districts. The following is a brief statement of them:—"Of the 2,100 registrars' districts, comprised in England and Wales, about 400, *containing a million and a half of inhabitants, have no post office whatever*. The average extent of these 400 districts is nearly twenty square miles each; the average population about 4,000. The average population of the chief place of the district about 1,400, and the average distance of such chief place from the nearest post office, between four and five miles. In one instance, Saxilby (in Lincolnshire), containing nearly 1,000 inhabitants, is as much as sixteen miles from the nearest post office; and in some parts of Wales the distances are even greater than this." There are districts considerably larger than the county of Middlesex, into which the postman never enters. It is difficult to estimate the check which these defects must necessarily give to the benefits of the cheap postage. The residents in these luckless districts have, as Mr. Hill points out, to seek opportunities often rare, irregular, insecure, and expensive, for transmission to the post town, distant perhaps several miles, whilst the reply perhaps does not reach its destination until it has figured some days in the post office window, or been crushed in the pocket of some forgetful friend or careless dependent. Newspapers and stamped periodicals are exposed to similar risks and delays. The system which is pursued in the rural districts of France, contrasts much to the disadvantage of this country. In France the *Poste Rurale* was established in 1830, and it extends to every commune in France; a box is fixed against a wall in each village, into which the letters are dropped, and in most cases once a day, but in some once in two days, a rural letter carrier comes round and conveys the letters to the nearest post office, delivering letters as he goes along. M. Piron, a chief officer in the French post office, estimates, that the steady annual increase of the French revenue, which is at the rate of 5*l.* per cent. per annum, is to be attributed chiefly to the *Poste Rurale*.

We have purposely avoided touching upon any of the points in controversy between Mr. Hill and the Post Office, or upon his abrupt dismissal from office, before his plan was half developed; we have rather preferred directing our readers' attention to some of the more glaring defects in post office management, about which there can be no dispute, and for the redress of which there is most urgent necessity.

Sketch of the History of Caister Castle near Yarmouth. By Dawson Turner, Esq. Whittaker & Co.

Essays of this kind have no small value as modes of illustrating the lives and manners of the aristocracy of this country, a century earlier than the Reformation. An additional interest belongs to the sketch before us, in consequence of the connexion of the subject with the history of the Fastolfe family, a name which Shakspeare may have slandered, but to which he has unquestionably given an immortal notoriety.

We shall quote the last passage of Mr. Turner's curious work, as a *resumé* of the annals of the once magnificent mansion which has engaged his researches:—

"The outline of the history of Caister Castle stands in brief as follows. Erected by Sir John Fastolfe between the years 1420 and 1440, it was his favourite residence, and continued during his life the seat of luxury and splendour, and literature and religion. Bequeathed at his decease, in 1459, to the Pastons, its walls could boast of little tranquillity, and its new proprietors of scarcely more than a nominal ownership, so long as, now with open violence, and now with the more insidious attacks of the law, their too powerful opponent, the Duke of Norfolk, thought fit to urge his claims to the property. On the death of the Duke, in 1475, succeeded a fresh but brief period of prosperity; for, only twenty years afterwards, the Pastons removing, fixed their residence at Oxnead, leaving Caister either altogether uninhabited, or in the hands of stewards, or servants. In the two hundred and forty years that have since passed, its decline and consequent decay have known no intermission. But, as observed at the outset, man's destructive hand has been more active in producing this effect than the slow and noiseless touch of time; and, if respect be justly due to the monuments of former days,—to names, scenes, and buildings, consecrated by history and the muse,—it would be well that the same hand should now be extended to arrest the course of the evil it has caused. Regarded in a higher point of view, a ruined castle presents to the eye a touching type of the vicissitudes allotted to mankind, and in the sketch here given of the different fates of this structure, may be traced but too apt a resemblance to human life."

An authentic copy of a document, entitled "an inventory of the money, plate, wardrobe, and furniture, which belonged to Sir John Fastolfe, at the time of his decease," is still in existence, and gives a striking idea of the wealth and splendour which the houses of great English proprietors displayed, in times so inferior to our own in the elegancies and amenities of life. Mr. Turner particularly remarks the prodigious quantity of the precious metals formerly accumulated in noble mansions, to an amount paralleled in but few modern houses.

Caister Castle was not more rich in treasure of this sort, than it was poor in treasure of another. The inventory contains no books, upon which fact Mr. Turner quotes the following observations:—

"Mr. Amyot observes—'I cannot conclude this summary without adverting to what may appear a remarkable omission. I allude to the absence of books of every description. The inventory, it is true, bears date a few years before the introduction of printing in England. Still, it might have been expected that an extensive library of manuscript volumes would have been found in the house, in addition to two missals, a psalter, and a martyrology, which are noticed among the furniture of the chapel. Had no classics appeared, we might yet have looked for stores of divinity, both scholastic and practical, as well as for the popular native poetry of Chaucer, Gower, and Lydgate, and for no inconsiderable supply of French chronicles and romances, the probable acquisitions of the continental warfare in which Fastolfe had been so long engaged. His learned secretary, William of Worcester, does not seem to have directed his patron's taste to the acquirement of a library; though in his own person he engaged in the pursuit of books with the ardour of a modern bibliomaniac.'"

The founder of Caister Castle was a man of the first mark in the reign of Henry VI., and held military commands and civil offices of the highest trust and honour. Governments of great importance in France were confided to him; he led the English troops at the "Battle of the Herrings," before Orleans, where he gained a remarkable victory over a French army, vastly superior to his own in point of numbers. This battle took its name from the English waggons, laden with herrings, (the season was Lent) behind which Sir John entrenched the handful of men with whom he overthrew the force opposed to him.

It has, however, been generally believed that the Sir John Falstaff of the first part of Henry VI., where he is introduced to his dishonour, is the Sir John Fastolfe of Caister Castle, whose name appears with so much lustre in the chronicles of the time: and Sir John, it must be admitted, fled at the battle of Patay before the mysterious power of the Maid of Orleans: but so did Lord Talbot and Lord Scales, as well as he. Mr. Turner quotes the passage in the play, introducing it as follows:—

"Towards the conclusion of the first part of his Henry VI., Shakspeare presents to the spectator that youthful monarch surrounded by his nobles, receiving the homage of the governor of Paris, while Falstaff presses forward, hot with haste, eager to tender his allegiance. The Lord Talbot, between whom and the knight there seems to have been a rivalry, not unmixed with personal animosity, and who was probably not sorry for the opportunity publicly to fix upon his name the disgrace of the defeat at Patay, bursts on this occasion into the following bitter taunts, which even the presence of the sovereign had not the power to restrain.

> Shame on the Duke of Burgundy and thee!
> I vowed, base knight, when I did meet thee next,
> To tear the garter from thy craven leg, *(plucking it off)*
> Which I have done, because unworthily
> Thou wast installed in that high degree, &c. &c.
>
> *K. Hen.*—Stain to thy countrymen! Thou hear'st thy doom
> Be packing, therefore, thou that wast a knight;
> Henceforth we banish thee on pain of death."

That a cloud (whatever may have been its density,) did, however, rest upon the fame of Sir John, after the action of Patay, there seems to be but little doubt. Probably he ran before the other English chiefs, or a little faster than they did. But it would seem that the disgrace of being stripped of the Garter was an invention of

Digitized by Google

his enemies, encouraged or sanctioned by the dramatists :—

"So foul a stain upon his character, it may safely be said, had no existence excepting in the pages of the chronicler, supported perhaps by the rumours of those who had felt the weight of his arm. Anstis, the historian of the order, who searched the records for the express purpose, assures his readers there is no entry of Fastolfe's name in the Black Book, which commemorates similar degradations; and, what is still more conclusive, regular mention is made of his attendance at the feasts of St. George, and the chapters of the order, till the period of his decease."

We concur with Mr. Turner in thinking that "it cannot be necessary to descend to particulars to vindicate Sir John Fastolfe from the misrepresentations of the stage." Indeed we are inclined to be of Mr. Halliwell's opinion, in his essay on the character of Falstaff, that "there is no ground for believing that Fastolfe and Falstaff have any connexion whatever with each other." The notion, however, that such a connexion existed is as old as old Fuller himself, and therefore of the Shakspearian age. Fuller has the following passage in his 'Worthies' :—

"To avouch him, (says the generous biographer) by many arguments valiant, is to maintain that the sun is bright; though the stage has been overbold with his memory, making him a Thrasonical puff, and emblem of mock valour. True it is Sir John Oldcastle did first bear the brunt of the one, being made the make-sport in all plays for a coward. It is easily known out of what purse this black penny came; the papists railing on him for a heretic, and therefore he must also be a coward; though indeed he was a man of arms, every inch of him, and as valiant as any of his age. Now, as I am glad that Sir John Oldcastle is *put out*, so I am sorry that Sir John Fastolfe is *put in*. Nor is our comedian excusable by some alteration of his name, writing him Sir John Falstafe, (and making him the property of pleasure for King Henry V. to abuse) seeing the vicinity of sound entrenches on the memory of that worthy knight, and few do heed the inconsiderable difference in spelling of their name."

If it be true that Sir John Falstaff first appeared under the name of Sir John Oldcastle, it is clear that the Fastolfe of Caister Castle did not sit for that incomparable picture. It appears to us that this hypothesis has been sustained by Mr. Halliwell with much success, and therefore, whatever injury Sir John Fastolfe may have sustained by the adoption of a name resembling his, in place of that of Oldcastle, there seems no ground for the censure with which Fuller visits Shakspeare upon this account, or necessity for Mr. Turner to "disprove the calumnies of Shakspeare." Mr. Halliwell is probably right in supposing that the name of Falstaff was inserted by the poet "merely for the purpose of marking one of the principal traits of his character."

Beside what relates especially to the house of Fastolfe, there is much curious antiquarian matter in Mr. Dawson Turner's essay. Here is a portrait of a domestic Czarina in the fifteenth century :—

"The care of Sir William Paston's numerous family, for he left five sons and a daughter, devolved upon his buxom widow, the Lady Agnes, whose character is displayed in full relief by her own letters. She was a stirring, active dame; one that held no slack hand over her children, who as some of them were then grown to man's estate, whilst others were yet in their infancy, can have been no light charge to a widowed mother. The following document from her hand, strongly elucidates the tone and turn of her mind, and affords at the same time a curious picture of domestic life in those days. It purports to be a 'Minute of errands to be executed in London,' and bears date 1457, the thirteenth year of her widowhood. The subject she had evidently most at heart was the education of her son Clement, who though only fourteen or fifteen years old, had been already a resident at Cambridge, but was at that time in the metropolis, under the care of a tutor. The memorandum thus commences:—'Item: to pray Greenfield to send me word faithfully by writing, how Clement Paston hath done his endeavour in learning, and, if he hath not done well, nor will not amend, pray him that he will *truly belash him*, till he amend. And so did the last master, and the best that ever he had, at Cambridge. And tell Greenfield that if he will take this upon him, I will give him ten marcs *for his labour*, for I had lever (rather) he were fairly buried than lost for default. Item, to see how many gowns Clement hath; and they that be bare let them be *raised*. He hath a short green gown and a short muster-deveter's gown, which were never raised, &c.'"

But the following trait of the fair Lady Agnes is more Amazonian still :—

"Another anecdote of Lady Agnes agrees with the tenor of her directions concerning her son, and marks, perhaps more strongly still, the rough manners of the day. Her daughter had displeased her by some tenacity of opinion in a matter wherein a young maiden of the fifteenth, or even of the nineteenth century, little loves to yield. And what was the course her mother pursued? This appears but too clearly from the following piteous representation, addressed to the elder brother of the family by their mutual cousin, Elizabeth Clare:—My Cousin, your sister, was never in so great sorrow as she is now-a-days; for she may speak with no man, whoever come, nor with servants of her mother's; and she hath since Easter been *beaten once in the week, or twice, and sometimes twice in a day, and her head broken in two or three places*.'"

NEW NOVELS.

Arabella Stuart: a Romance from English History. By G. P. R. James, Esq. 3 vols.

In his elaborate and complimentary dedication, Mr. James anticipates that "the public will judge" this romance to be "one of the most interesting tales he has ever written"—announces his intention of being less lenient towards "gentle King Jamie," than was Sir Walter Scott in 'The Fortunes of Nigel'—pays a high compliment to Mr. Ollier's 'Ferrers'—and explains why he has permitted himself to deal with such an incarnation of wickedness as the Countess of Essex. These preliminaries despatched, we come to the book and the heroine. Few who are familiar with Lodge's Portraits, will have forgotten a pale spectral figure, with the melancholy half-vacant smile of one in whom passion and thought had been compressed, and Life and Reason crushed out—the portrait of Lady Arabella, a mute witness to the miserable results of court intrigue, and to the influences which "Ceremony" may exercise over the hearts and affections of those, who ask no other boon of their Royal kindred, than permission to live obscure and happy. One of the most delicately handled articles in Mr. D'Israeli's 'Curiosities of Literature,' and the affecting fragments from her letters there given, bear out the impression of that picture. Who has forgotten those few startling words to Lord Fenton, when imprisoned and separated from her husband?—"And *if you remember of old I dare die*." The same strings of passion and terror were touched on behalf of the Lady Arabella, by Mrs. Hemans, in her "Records of Woman," though more gently—inasmuch as no poetical soliloquies, however eloquent, could enhance the misery revealed by the pen of the victim herself. Mr. James comes in third, after the literary antiquarian and the poetess, but at a long interval; not because he is a romancer—but from the inferiority of his work, which is either more diffuse, and more feeble than usual, or appears so from our intimacy with its subject, and our vivid recollection of Sir Walter Scott's novel. Mr. James himself appears to have been oppressed with these and other circumstances: to the Scottish Solomon's peculiar and vituperative manner of discourse, the novelist "cannot attempt to do justice." For an idea of the "Ordinary" of the time, frequented by the rakish gallants of the court, we are referred to the scene at Beaujeu's, "so admirably depicted by Walter Scott"—to describe the masque at Theobald's, the familiar passage from Sir John Harrington's 'Nugæ' is quoted—to authenticate the dealings of Lady Essex with Dr. Foreman, the "evidence given before a court of justice" is appealed to; while even, in aid of the romancer's own fancy description of a hawking party—one of the subjects in which he is admitted to excel—he tells us that "it was fit for the pencil of Landseer." What are all these shifts and expedients, but so many confessions of inability, and entreaties for the knowledge and imagination of the reader to help out the writer's imperfections? If we carry this system a little further, an historical novel may be produced by a page of tabulated references to biographical dictionaries, collections of state papers, picture catalogues, and romances already written. In brief, as our attention is, by the author's direct importunity, called to symbols in place of pictures—we must, of necessity, pronounce the Lady 'Arabella Stuart' one of the least interesting works given to the libraries by its indefatigable author.

Whitefriars, or the Days of Charles the Second. 3 vols.

Though less clearly defined in plot; crowded with incident, overwought in situation, and therefore amenable to the criticism of the Esquimaux, who found in our city "too much of everything," 'Whitefriars' is more powerful and striking as a romance than 'Arabella Stuart.' As a tale of terror and adventure we recommend it to all Christmas folk whom it may concern. A guess at its parentage may help them also to a good Christmas riddle. For our own parts, we should be somewhat perplexed, if called on to give our opinion. It is better than Ainsworth, and in his style, but at once soberer in tone and richer in character, particularly in the dialogues: if then, by Ainsworth, he has published his best novel anonymously. But the occasional verses, from their truth of colour, recall to us the lyrics in 'Shakespeare and his Friends.' Here, for instance, though by no means the best—is a song sung by Nell Gwynne in Alsatia, which vividly recalls the past :—

The sea, the sea, is England's,
And England's shall remain,
Tho' the might of France, and the world advance,
To contest our ocean reign!
Quoth gallant Blake, as he spread his sails,
And his cannon shook the waves:
Fire away, boys! for the day is ours,
Or here, lads, foam our graves.
Fire away, boys! quoth he again,
For the sea, the sea, is England's,
And England's shall remain!

The fresh winds blowing loud and strong,
The Spaniards fled—which rare is—
And we chased them far, and we chased them long,
Till they anchored in Canaries.
Quoth our admiral, as their castles blazed
With guns like a stormy night,
Do they think to frighten us? Fire away, boys,
For old England's might and right!
Fire away, boys! quoth he again;
For the sea, the sea, is England's,
And England's shall remain!

We sunk and burned and we took them all,
With gold and spices laden,
And our sweethearts each had a jolly haul,
For each loved his English maiden;
But as home we came—quoth our admiral,
I'm going, lads, aloft!
And he died with a smile, but his dying word
Was, Fire away, boys! now board her! soft!
Fire away, boys! quoth he again,
For the sea, the sea, is England's,
And England's shall remain.

It is beyond our skill, within present limits, to unthread the mazes of this story. Suffice it to say, that many of the personages seen in 'Peveril of the Peak' figure in its pages—though seen through a glass differently coloured, and under different circumstances. The Merry Monarch's sensuality takes, in 'Whitefriars,' the form of cruelty bargaining with its victim after the fashion of Colonel Kirke. Dr. Titus Oates is exhibited in the Jesuits' College at Saint Omer,—a double-faced traitor in the midst of a company of pious and reverend ecclesiastics. Then we are shown the growth of the Popish Plot, and the whereabouts of Sir Edmondbury Godfrey's murder. By the way, the procession down Cheapside on the occasion of the discovery of the magistrate's body is done with a force, and a colour, which surpass the best acknowledged scenes of the kind by the author of 'Rookwood:' Colonel Blood is also among the *dramatis personæ*: this time more of the Bethlem Gabor, and less of the bully than he has been usually portrayed: while, to crown all, that brilliant "ladies' man" Claude Duval the Highwayman, appears throughout the story wherever a miracle is wanted, as capriciously as wildfire, but far more benevolently. Of hero and heroine we have purposely not said a word. Nor

Digitized by Google

do we retract our judgment of the class to which 'Whitefriars' belongs. It is, however, one of the best of its race: and we are perhaps, all the more lenient to it from having made its acquaintance in close juxtaposition with Mr. James's historical romance.

The Brothers, a Tale of the Fronde; and other Stories. By the Author of 'Oliver Cromwell,' &c. 3 vols.

We need hardly repeat, that the author of 'Oliver Cromwell' commands power, passion, and picturesque effect, beyond the average. Here, however, he employs them somewhat despotically to work out a story, the main incident of which "out-Herods Herod" in extravagance. One day, when riding in France, the narrator of the romance chances to witness a mortal encounter between two brothers, in which both perish. The cause of this is a fair mysterious lady, till then unknown to him, whom the Knight binds himself on the spot to defend and protect; and the end is, that after a day's flight, with his treasure before him, they are married at midnight. Now, doubtless, strange things were done in the days of the Fronde; and we know that even in these more prosaic times, combinations again and again occur, to conceive which would beggar invention; but there are such things as taste in selection, and probability even in the marvellous: and without due advertence to these, fancy degenerates into mere raving, and surprise and suspense lose all their power "to hold and to bind." Hence, we have never fairly become interested in 'The Brothers,' striking as are some of the scenes, and brilliant the colouring. The shorter stories are more to our taste, though somewhat melo-dramatic. 'Haco, the Sea King,' reminds us of Mr. Longfellow's striking ballad, 'The Skeleton in Armour.' In 'The Eve of St. Bartholomew,' and 'The Adventure of Bellechassaigne,' we are on more familiar French ground; the hideous story of the massacre being happily diversified by the introduction of Scott's 'Cadyow Castle'—Hamilton of Bothwellhaugh. In 'Marcus Curtius,' and 'The Oath of Catiline,' the author rather perilously ventures on Mr. Macaulay's domain, for who is there that does not wait for more Roman lays from his vigorous hand? The miscellany is made up by 'The Lord of the Manor,' and 'The Death of Soto' the discoverer. In all of these we recognize talent of no ordinary cast. But Mr. Herbert must take heed that he does not wear it out by wanton or careless exercise.

Men and Women, or Manorial Rights. By the Author of 'The Adventures of Susan Hopley.' 3 vols.

'Susan Hopley' has been greatly praised; in our opinion, somewhat overpraised. With all its verisimilitude of dialogue, the march of incident was so artificially conducted that, after the first fifty pages, we entertained not the slightest uneasiness as to the catastrophe. The same remark applies to 'Men and Women': there is greater power in the story, and some of the scenes are, indeed, admirably written,—but suspense was soon over, from the care prepense bestowed on the very slightest incident, as an indispensable part of the machinery, sufficient to forewarn us that "*something*" was to result from it; and that something, it was natural to hope, on the side of oppressed Virtue. This way of building-up a story is not *construction*, in our acceptation of the word. If we turn to Fielding, or to Miss Austen—that master and mistress of the art,—we find that their artifice was surpassed by their ease and nature in concealing it; that the incident which served as clue to the labyrinth, was rather remembered afterwards, and turned back to, than watched and noted at the time; whereas, here a visit to a post-office, the loss of a horse's shoe, and the chance words and looks thrown out by third-class actors, are as carefully detailed in *italics*, as the great scenes and combinations. So much by way of distinction, that we may not be accessory in encouraging a clever author in a false principle;—and clever assuredly is the writer of 'Men and Women,' nor is his tale, in its way, without a moral. A rich baronet, who has propensities like Pamela's Mr. B——, has the discretest of discreet valets, whom he trusts with every commission; the valet, one turn more cunning than his master, never makes the latter aware that he has a pretty sister—whence come terrible, irremediable mischief to the poor girl; revenge and murder. This first idea, though not the pleasantest in the romancer's catalogue, is worked out with great skill. Nobody in the tale suspects Groves, the valet, of Sir John's murder, for no one has known Fanny's story; no one reading it, however, can doubt the fact for a single instant, even before he is aware of the relations which existed betwixt master and servant. Then comes the old intrigue of suspicion falling wrongfully—of the attempt to conceal one dark deed leading to a deed yet darker. Nor are there many passages in modern fiction better than the scene between Groves and Burnley, in which certain touches of rude pathos contrast excellently with the smooth and glossy hypocrisy of other portions, and are beyond the power of any save a master-hand. The opening of 'Men and Women,' too, with its picture of the genteel family in difficulties, is painfully true. In short, the novel is far superior to 'Susan Hopley.'—We cannot part from it without recording our conviction that a change for the better has passed over the world of Fiction during the last twelvemonth. We have, it is true, had nothing of startling genius, or of any remarkable originality (the Swedish novels excepted), but far less of characterless trumpery than in former seasons.

OUR LIBRARY TABLE.

Juvenile Poems, by C. I. Black.—This is a modest volume, composed of college exercises intended for a projected periodical. There is sufficient merit in some of these to justify us in believing that the author has in him a capacity to do better things, when he shall have grown older. One fault, at any rate, they are free from—there is no fustian. The larger proportion of the volume consists of sonnets, and many of these—perhaps most—are regular in form. This is a mark of good taste. Nor is the author, in his lyrical vein, without feeling, thought and imagery. Take the following specimen:—

I see thee, Glendalough!—no dream
Of wild imagination:
Far lovelier do thy beauties seem
To quiet contemplation—
I see thee, and I hear a voice
Into my bosom stealing,
That bids me inwardly rejoice
In ecstacy of feeling.

And yet—for thoughts of sorrow will
Oft mingle with our gladness,
Creating, when the heart is still,
No unbecoming sadness—
While to this feast of nature I
Both soul and sense surrender,
I check not the obsequious sigh
O'er faded pride and splendour.

The mists descend, the mountain heads
With snow-like wreaths adorning:
And through the glen unbroken spreads
The stillness of the morning—
No streamlets' voice—no bird along
On dowy pinion soaring
Chants forth to heaven its matin-song,
Melodious pleasure pouring—

But solitude and silence dwell
Like sisters, here united;
And Echo in her rocky cell
For ever rests delighted!
And pale Romance around each cave
Is happy still to linger,
And touch each mound and humble grave
With sanctifying finger.

We cannot venture on the romance itself—but the above for "juvenile poetry," is not so bad. There is a power and facility about it seldom found under more ambitious titles. We warn the author, however, against being betrayed by them into writing overmuch. Good as this volume is, as a work of promise, it would have been better had half the pieces been omitted.

Poems, Original and Translated, by C. R. Kennedy, Esq.—What has been heretofore said of the verses of Mr. Trench, Mr. Alford, Mr. Strong, Mr. Simmons, Sir John Hanmer, Mr. Hawker, Miss Lowe, and a score of others, will apply to the Poems before us. They are meritorious as betokening amiable feeling and refined taste, a love for, and a knowledge of the best English poets. Mr. Kennedy, indeed, has a wider circle of acquaintances, for he reads and renders Goethe, Gellert, Körner, Uhland, Freiligrath, Rückert, De Lamartine, and Manzoni.

The Last Days of Francis the First, and other Poems, by J. T. Mott.—This volume belongs to that level school, which is too good for censure—too characterless and imitative for praise. In the days when Whalley (Miss Seward's "Edwy") and Weston of Solihull—nay, and even the more notable Merry, were dignified by the name of Bards, Mr. Mott would have shone resplendent as a star: now, he must be contented to *twinkle*.

Fidelity; or, a Town to Let Unfurnished in Six Books, by G. Hatton.—Meant to be didactic and sarcastic. Mr. Hatton, one of the Manchester poets, tells us that he found great solace, during a long illness, in writing 'Fidelity.' Had he been content with this, he might have regarded his employment with unmixed complacency.

The Philosopher's Stone, and other Poems, by M. Hopkins.—With much that is crude, dry, and puerile, there is still mixed up a grain of original inspiration and feeling; and we would refer, in proof, to 'The Nursery Window.'

Sacred Poems, by J. E. Reade.—Mr. Reade's "last appeal to the public for many years" must not be overlooked: the less so as it enables us to part with him courteously, though on terms we fear which will not satisfy one so ambitious. Mr. Reade now desires—or we err—to be rated among our sacred poets: to take rank with Heber and James Montgomery, Milman, Bowles and Keble: "Let me play Thisby, too," seems to be the motto of his aspiration, which leaves unturned no field where any other contemporary has laboured. This cannot be granted. Deprived of the strong aid of his memory, Mr. Reade sinks at once to the level of the thousand who "measure off" rhymes with industrious alacrity. Let the following short extract attest the truth of our character:—

On the Death of Southey.

Another Star hath set;—though long declining
Upon the verge of Life's horizon, we
In his effulgence darkened watched him shining:
Until Hope, gazing toward him mournfully,
Deemed she might yet his light emerging see.
It was a wish unjust, a thought unweighed;
His spirit burns among us undecayed!
And who would live in earthly bonds confined,
Eclipsed in darkness the immortal mind?
Had he not acted on Life's busy stage,
The tutelary spirit of his age?
Historian, bard, philosopher was he:
Who hath not gathered wisdom from his page,
And truth in all its sunlike purity?
Then blessed be his earthly pilgrimage!
But *he* had higher, nobler wreaths than those
Given or withheld by ever-changeful Fame:
He was the good—the just; and Virtue throws
Her evergreen round Southey's deathless name!

As a monumental inscription, how deficient in concentration—in pathos; as a poem, how bald and trite. Yet Mr. Reade has published a fragment or two of translations from the Odyssey, which, though far short of the Homeric standard, justify our asking, whether he might not employ himself honourably among the choir of English poets as a translator. In this capacity, his taste, his mastery over versification, his acquaintance with many languages and literatures, might be turned to advantage. Nor is this direction of his talent of humble value. Power to originate is the only high poetical requisite which cannot be called into play, when the task undertaken is fitly to render the high thoughts and graceful imaginations of the great poets of our own and other times. Mr. Reade would do well for his own peace of mind, we suspect, to weigh this suggestion.

Summer Offerings, by W. Gaspey,—would be none the less welcome at Christmas, were they fresh, warm and glowing. These, however, though pleasant and melodious, lack the distinctive hue of the season, which would make them charming by contrast.

The Veil Lifted, or Incidents of Private Life, a series of Original Tales, by Mrs. Paxton; second thousand.—'The Bottle Broken' would have been a fitter title to this miscellany. Mrs. Paxton, like Mrs. Ellis, considers the Vine as a poisonous weed, and its culture a Satanic employment. We need say no more, having no intention to argue a question so momentous as the one the surface of which is not even skimmed by the enthusiasts, who imagine they have settled it.

An Illustration of Ezekiel's Vision of the 'Chariot.'—This is another attempt to interpret Isaiah's prediction and Ezekiel's vision of the Chariot. As the writer is earnest and sincere, his opinions are entitled to respect, however wild and visionary. He admits the full force of the difficulties, and tells us, in illustration, that the Jews considered Ezekiel inexplicable. "There is a tradition," he quotes, "that the Rabbins held a consultation, whether they should

Digitized by Google

admit him into the sacred canon, and it was likely to be carried in the negative. When *Rabbi Ananias* rose up and said, he would undertake to remove every difficult part in the whole book—this proposal was received; and to assist him in his work, that he might complete it to his credit, they furnished him with *three hundred barrels of oil*, to light his lamp during the time he might be employed in the study of this part of the subject!" But the writer holds, with Newton, and Clarke, and others, that prophecies which relate to a remote future can only be understood after their fulfilment; and therefore he has the less hesitation in undertaking to interpret or apply them. The following passage will perhaps satisfy our readers without entering into details:—"The prophetic vision of Ezekiel so many centuries ago, which commentators one and all have agreed '*past finding out*,' could not have been discovered or rendered intelligible before the present era—for how could the mind of man comprehend that which was *unknown?* The *use* and *power of steam*—who could *foreknow?* the growth of science how express? * * observation compels a belief, that the highway spoken of in Isaiah ('Prepare ye the way of the Lord, make straight in the desert a highway for our God. Every valley shall be exalted, and every mountain and hill shall be made low, and the crooked shall be made straight, and the rough places plain') and Baruch, v. 7, and explained by all commentators *literally*: with the chariots of Ezekiel (chap. i.) and of Nahum (ii. 4,) have reference to railroads and railway conveyance by locomotive carriages; and the more minutely the form and construction of the powerful engine, in connexion with the carriages, are carefully and minutely examined, and compared with effects, the more opinion strengthens and conviction confirms the truth, that *it is altogether of divine origin*, and little short of miracle, that after the lapse of so many ages, * * the description of it should be handed down to us in the *nineteenth century*, in language so appropriate, so true, intelligible, and descriptive, that it is impossible to mistake its *meaning*, for although Ezekiel saw *four* '*living creatures*,' (destined for the four quarters of the globe—'in the fulness of times')—he shews clearly their component-parts were of *iron* and *burnished brass*, containing inwardly *fire*, without consuming itself—'*fire of coals!*' sufficiently large and active to send upwards a lengthened wreath upon wreath, of crystal-coloured cloud, and their centre to be of burnished brass, sparkling, as with lightning speed they winged their way, emitting sparks as from forged *iron*, instinct with a vital spirit, *unknown till steam* and its powerful effects were disclosed to man, by the manifold wisdom of God; the force of the steam escaping, panting as with the breath of life, is accurately described by the prophet, and the beautiful confusion of ideas, to give expression to the extraordinary sounds applicable to what he saw and heard, when 'four living creatures' started at one moment before, is grand in the extreme and true to the letter."

Young England's Little Library.—We take leave to suggest to the publisher that "By Jabers"—"By Gad"—"Here's a go"—"Down with the dust"—'Jolly Cocks," are not the pure idiomatic English best suited for the edification and instruction of 'Young England:' yet all these expressions are found in one small volume of this 'Library;' which we recommend him at once to withdraw, as unworthy company for the tales of Mrs. Howitt, Mrs. Hall, Mr. C. Clarke, and others. Further, it would have looked better had he acknowledged in the title-page that some of these tales are reprints. The same want of acknowledgment also applies to the wood-cuts of 'Jack Holiday,' which we recognize as copies from a French caricature Alphabet, published some four or five years since. The 'Tale of Glory,' too, is said, in the title-page, to be "Illustrated by John Absolon," whereas the illustrations are stereotypes of French wood-cuts. These facts make us suspicious—and we do not think it necessary to hunt further, or write more on the subject.

Almanacks.—The Anglo-Indian-Chinese.—The Complete Suffrage.—The distinctive characters clearly indicated in the titles. *The Indian* has been hurried out somewhat prematurely, but the editor promises improvement next year. *The Complete Suffrage* has been ably and carefully compiled with reference to its specific object.

List of New Books.—Oliver & Boyd's New Edinburgh Almanac and National Repository for the Year 1844, 18mo. 4*s.* bd.—The Land of Israel, by Rev. A. Keith, post 8vo. 9*s.* 6*d.* cl.—The Order of the Daily Service of the Church, by T. Tallis, new edit. by J. H. Taylor, crown 8vo. 8*s.* cl.

OUR WEEKLY GOSSIP.

THE rush of publication towards the close of the year makes such demands on time and space, that we have resolved to give ourselves, this week, wholly to the past, and to reserve Major Harris's Travels in Æthiopia, Barrow's Life of Sir Francis Drake, Gayangos's second volume of Al Makkari's History of the Mohammedan Dynasties in Spain, and other important works, for the opening of 1844. Letters, also, from Cairo, of the 20th ult., we must reserve, except so far as to announce from them the death on the 17th, of Hanna Bahari Bey, vice president of the Council of the Interior and Minister of Finance; a man of great influence, whose death, it is believed, will have important consequences.—And we can but record here the death of the once famous Madame Catalani, reported in the foreign journals. Her career, however, and the amount of its influences on art, were too remarkable to be dismissed thus briefly.

A letter from Cairo, speaking of the Viceroy's departure for Upper Egypt, says, "it is expected to result in a work of great importance—that of opening, near the first cataract, a canal, which shall conduct the water from that point, along the slope of the Libyan chain, and consequently *above* the valley, as far as Middle Egypt. A means of irrigation will thus be obtained, as simple as it will be effectual."

The *Delhi Gazette* of the 28th of October, just received, contains a long and circumstantial account of proceedings at Bokhara, which, if true, would show that Col. Stoddart was alive and well, though a prisoner, in June last, but that Conolly had been put to death. Other reports, in the Indian papers, tend to confirm this account, but we put little faith in these narratives. Now it is known that Europeans are willing to pay for, or even to welcome such reports, the East will furnish them in abundance.

It is stated, that among the candidates for the Edinburgh Musical Professorship, vacated by Sir H. R. Bishop, the real "tug of war" will be between Mr. Donaldson, an ex-professor highly esteemed in the North, and Dr. Gauntlett, whose skill, as a theorist, lecturer, critic, and organ player, is better known in the South. Mr. W. S. Bennett, also, is said to be in the field.—Signor Persiani's 'Il Fantasma,' seems to have been well received at the Italian Opera House, in Paris, in spite of the improbability of its *libretto*. Any relief from Donnizetti must, just now, be welcome—his 'Maria di Rohan' having failed to please—while his more pompous 'Dom Sebastien' at *L'Académie*, sarcastically entitled by some small wit of the *parterre*, '*The Funeral in Five Acts*,' is admitted, on all hands, to be a lugubrious mistake. M. Léon Pillet, the manager, has started for Italy, in quest of singers.—The last news of our Opera manager, Mr. Lumley, was from Naples. We have but little faith in these tours of discovery. When will those whose business it is to cater for the public learn, that besides producing what is or has been famous, it would be a wise policy to search out and encourage what may become so? The thing turned from, by common consent, appears to be Originality! The new opera of MM. Scribe and Auber, for the *Opéra Comique*, is to have the taking title of 'The Syrens.'—Our own French theatre opens in the middle of next month, with M. Achard as chief attraction.

From Berlin we hear, that the Minister of Justice has appointed a commission, charged with the somewhat curious task for a commission, of writing the lives of the greatest criminals who have been condemned by the tribunals of Prussia, during the last ten years. Great reforms in civil and criminal legislation are spoken of, as being in contemplation, or preparation, for that country;—including, amongst the former, the abolition of imprisonment for debt,—and, amongst the latter, oral pleadings, publicity of debates, and trial by jury. Accounts are given from Quedlinburg, of a visit, made by the Prussian King, at the end of last month, to the celebrated vault beneath the chapel of the castle in that town,—which chapel is built entirely of sandstone, whose exhalations are reported to have the property of preserving bodies from corruption. To test the virtue of this species of embalming, his Majesty caused to be opened the tomb containing the remains of the Emperor Henry the First, who died in 936, and that enclosing the body of the famous Countess of Kœnigsmark, the mother of Marshal Saxe, who died in 1728. The body of the Emperor was dried up, the features were undistinguishable, and the vestments crumbled into dust:—but the body of the Countess was wonderfully preserved, the face yet retaining the traces of her marvellous beauty. Her dress, consisting of a robe of silver brocade, a Mary-Stuart cap, in white velvet, embroidered with silver and pearls, white silk stockings, and white satin shoes, had all the gleam and freshness of novelty.

A paragraph has gone the round of the daily papers, headed "Caution to the public," to the effect that a method has been discovered "of forming figures, groups, &c. in zinc, which, being bronzed, have all the appearance of real bronzes, while the malleability of the material renders their formation so easy, that a figure may be thus produced at a cost of 50*s.* which would cost 30 guineas if cast in brass;" and that several collectors have been deceived by these counterfeits. Would this were true! Of course where the cheap article is sold for, and at the price of the more costly, fraud is practised, and the fraudulent dealer ought to be sent to the treadmill; but the discovery, if made, is important. We doubt it, for obvious reasons—doubt that the counterfeits have "all the appearance of real bronzes"—but should be glad to know where specimens may be seen.

It is no unmeet farewell to the Year, to close it by a Poet's epitaph on a Poet. The following is the inscription prepared by Wordsworth for the monument to Southey, in Crosthwaite Church, near Keswick, which the friends and neighbours of the deceased Laureate have decided on erecting:—

"Sacred to the memory of Robert Southey, whose mortal remains are interred in the neighbouring churchyard. He was born at Bristol, October 4, 1774, and died, after a residence of nearly forty years, at Greta Hall, in this parish, March 21, 1843.

"Ye torrents foaming down the rocky steeps,
Ye lakes wherein the Spirit of Water sleeps,
Ye vales and hills, whose beauty hither drew
The Poet's steps, and fixed him here, on you.
His eyes have closed; and ye, loved books, no more
Shall Southey feed upon your precious lore,
To works that ne'er shall forfeit their renown,
Adding immortal labours of his own:
Whether he traced historic truth with zeal
For the State's guidance, or the Church's weal;
Or Fancy, disciplined by studious Art,
Informed his pen, or Wisdom of the heart,
Or Judgments sanctioned in the patriot's mind
By reverence for the rights of all mankind.
Large were his aims, yet in no human breast
Could private feelings find a holier nest.
His joys, his griefs, have vanished like a cloud
From Skiddaw's top; but he to Heaven was vowed
Through a long life, and calmed by Christian faith
In his pure soul the fear of change and death."

Will be shortly Closed.

DIORAMA, REGENT'S PARK.

The Two Pictures, now exhibiting, represent the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. RENOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTOW. Open from Ten till Four.—N.B. The Gloria, from Haydn's Service, No. 1, will be performed during the midnight effect of the Cathedral of Notre Dame.

Christmas Holidays.
At the ROYAL POLYTECHNIC INSTITUTION an increase of POWERFUL and BRILLIANT EFFECTS in ELECTRICITY is exhibited by ARMSTRONG'S HYDRO-ELECTRIC MACHINE. A new field is opened for investigating, on a magnified scale, a variety of objects in ART, SCIENCE, and NATURAL HISTORY, by means of LONGBOTTOM'S OPACUE MICROSCOPE, showing also an extraordinary OPTICAL ILLUSION. New DISSOLVING VIEWS. A List of the POPULAR LECTURES which will be delivered during the Week is suspended in the Hall of Manufactures. Holloway's ORIGINAL CRAYON DRAWINGS from RAPHAEL'S CARTOONS, numerous MODELS in MOTION, DIVER and DIVING BELL. Conductor of the Band—T. Wallis, Mus. Doc. Admission, One Shilling.—Schools, Half-price.

SCIENTIFIC AND LITERARY

GEOLOGICAL SOCIETY.—*Dec.* 13.—The President, Mr. Warburton, in the chair.—The Rev. T. Image was elected a Fellow.—The following papers were read:—1. 'Notes respecting the Coal Measures, Limestone, and Gypsiferous Strata of the Island of Cape Breton,' by Mr. R. Brown. The author gives the details of certain sections in the coal fields of Cape Breton, confirmatory of Mr. Lyell's views of the relative age of the gypsum and other strata in that island.—2. 'On the lower Carboniferous Rocks or Gypsiferous Formation of Nova Scotia,' by Mr. J. W. Dawson, of Pictou, Nova Scotia.—The coal formation of the eastern part of Nova Scotia consists of a great thickness of sandstones, shales, and conglomerates of various reddish and grey colours. The lower part of the series is distinguished by the presence of limestones with marine shells and gypsum. In this paper the author examines the structure and relations of the lower or gypsiferous formation, prefacing it with a notice of the general disposition of the rocks of the carboniferous system in the region extending along the shores of the Gulf of St. Lawrence, from Tatmagouche to Antigonish Harbour. The gypsiferous formation is described as met with at East River, Merigonish, Antigonish, and Shubenacardie. The results of Mr. Dawson's inquiries confirm the views advanced by Mr. Lyell in his papers on the geology of Nova Scotia.—3. 'On Concretions in the Red Crag at Felixtow, Suffolk,' by the Rev. Prof. Henslow.—The concretions described are more or less spheroidal, fusiform, and cylindrical, many of them amorphous masses of a fine-grained compact, dark brown, ferruginous claystone. Their surfaces are smooth, often polished, and they sometimes include organic remains. Prof. Henslow regards them as of coprolitic origin. Resembling them are certain silicified masses, which prove to be the petro-tympanic bones of extinct cetacea; and Prof. Owen has determined that Prof. Henslow's specimens belonged to no less than four distinct species of whales of the genus Balæna.

BOTANICAL SOCIETY.—*Nov.* 29.—*Seventh Anniversary Meeting.*—J. Reynolds, Esq., Treasurer, in the chair.—From the Report of the Council it appeared that thirteen new members had been elected since the last anniversary, and that the Society now consisted of one hundred and fifty-nine members.—The donations of foreign plants had far exceeded that of any former year, and many valuable British specimens had also been received. The Cryptogamic Collection (both British and foreign) had much increased, many new species having been received. The Report was unanimously adopted. A ballot then took place for the Council for the ensuing year, when J. E. Gray, Esq., F.R.S., was re-elected President, and the Chairman Treasurer.

MEDICO-BOTANICAL SOCIETY.—*Dec.* 14.—Dr. Cooke in the chair.

A paper was read by Mr. Barham on the *Solanum dulcamara*, in which he corrected a prevailing error among botanists, by whom the plant is described as *twining*. Mr. Barham exhibited a collection of the stems of the Solanum, none of which had any pretension to be so described. He observes that he has long been acquainted with it in every variety of soil, from the top of a dry wall to a wet ditch, but has never met with a twining stem; of that he is of opinion, if such should ever have been observed, that it must be a deviation from the usual character. The stem will not unfrequently be found ten or twelve feet in length, sometimes nearly straight, at others presenting a zigzag appearance, and should it grow amongst bushes, from the support afforded, its growth will be upwards, if amongst grass the part of the stem in contact assumes a warty appearance, and eventually becomes radicant.

The secretary afterwards read a communication by Mr. Hooper, on the Essential Oils of the *Anthemis nobilis*. The blue oil was obtained from the flowers, the pale yellow from the herb after the flowers had been gathered. Mr. Hooper observes, that the flower from the plant of the first year's cultivation is best adapted for medicinal purposes, and yields a greater quantity of essential oil and extract. Many persons prefer the wild plant, on account of the cultivated variety degenerating after the first year's growth.

Specimens of the leaves of the *Conium maculatum* dried in June 1842, and of the strobules of the hop dried in Sept. last by spontaneous evaporation, were exhibited by Mr. Hooper, as illustrating the advantages of that process.

Mr. Mowbray next laid before the meeting specimens of extracts prepared *in vacuo* by a modified apparatus, of which he gave a brief description, promising further explanation at the next meeting.

ENTOMOLOGICAL SOCIETY.—*Nov.* 6.—George Newport, Esq., President, in the chair.—Various insects were exhibited, including illustrations of the natural history of a species of moth which infests the stems of the sugar-cane in the island of Madeira. Mr. Yarrell exhibited some singular parasitic annulose animals, which infest different kinds of fish.—A paper by Mr. Waterhouse, containing descriptions of a new species of Curculionidæ, from the Phillippine Islands was read, and a long discussion ensued on a question of zoological nomenclature, not contemplated in the Report of the Committee on that subject appointed by the British Association.

Dec. 4.—The President in the chair.—Mr. Westwood exhibited specimens and drawings of some new and rare species of Goliath beetles, Paussidæ, and other exotic coleopterous insects; and Mr. Hope exhibited a large collection of drawings of the transformations of Indian moths and butterflies, made by Mr. E. Downes. The following papers were read: 'An account of the proceedings of a small Acarideous insect, which infested the plane trees in the Regent's Park during the past summer in countless myriads, spinning its web over the stems, and causing the leaves to wither to a great extent,' by Mr. Wilson, with additional notes by Mr. White; 'Memoir on the occurrence of thoracic bronchiæ, in the perfect state of *P. teronarcys*, a genus of Neuropterous insects,' by the President.—Mr. Walton mentioned the capture of the real *Curculio Bacchus*, of Linnæus, on the 20th of September last, upon a young oak tree in Kent.

MICROSCOPICAL SOCIETY.—*Dec.* 20.—E. J. Quekett, Esq. in the chair.—A communication from Mr. Tuck, upon certain Parasites in the Dog, was read.—These parasites were found by Mr. Topping, on examining microscopically the contents of the pustules in a mangy dog. They belong to the genus Demodex (Owen), first discovered, figured, and described by Dr. Lemon, of Berlin, as inhabiting the sebaceous sacs and hair follicles of the human skin. The discovery of this parasite may throw some light on the cause of the disease called "mange," a distemper by no means confined to one class of animals, while at the same time it is far from being certain whether this insect is the exciting cause, or is merely developed during the progress of that disorder.—The chairman made some observations upon *Tettigonia septendecim*, a North American insect, sent by Prof. Bailey, the ovipositor of which, he stated, forms a curious microscopical object. He exhibited specimens of the male and female insect, and also some wood, illustrating the injury done by it. He also laid before the society some earth from Petersburg, in Virginia, described by Prof. Rogers as containing fossil animalcules, and noticed several new forms found in it.—Mr. Ross communicated an observation relative to the Daguerréotype Process first noticed by R. H. Solly, Esq. If an ordinary Daguerréotype portrait be examined with a power of about 200 linear, the surface in the parts upon which the light has acted, instead of being perfectly smooth, is found to be covered with a series of minute dots or globules, arranged in a hexagonal form.—A Fluid for cleaning Glass was also presented. It consists of a strong solution of nut-galls. Glass wiped with this fluid is effectually freed from all greasiness.—Mr. Busk exhibited the Achromatic Object-Glass of a Telescope, having a minute conferva growing between the lenses composing it. Some discussion took place as to whether this appearance was the effect of vegetation, or produced by a species of crystallization on the surface of the glass.

MEETINGS FOR THE ENSUING WEEK.

MON. Entomological Society, 8.
— Chemical Society, 8.
WED. Geological Society, half-past 8.
THUR. Zoological Society, 3.
FRI. Botanical Society, 8.

FINE ARTS.

DECORATION.

House-Painting—(concluded.)

ALTHOUGH the character of the room to be decorated should influence the mode in which the colouring is treated, it need not much affect the choice of the colours themselves. These, according to the principles we have endeavoured to enforce, should be chosen principally with reference to the aspect of the room. Partly from habit and association, and partly from the peculiar uses to which rooms are applied, we are inclined to exact a particular style of decoration, correspondent with the character of the room; and in houses of the better class, a certain sort of characteristic style is kept up. In libraries, for instance, we desiderate an air of quiet and repose; in drawing-rooms, vivacity and lightsomeness; in dining-rooms, richness, and comfortableness especially, should be the predominant impressions. But in order to obtain these characteristic effects, we have to look less to the colour itself than to the mode of treating it.

In respect of the *library*, Mr. Hay says—"The most appropriate style of colouring for libraries is solemn and grave, and no richer colouring should be employed than is necessary to give the effect of grandeur, which can scarcely be done where one monotonous tint prevails; but care should be taken not to disturb the quiet and solemn tone which ought to characterize the colouring of all apartments of this description." It appears to us, with all submission to so excellent an authority, that in order to associate quietude with a library, it is not necessary to choose dull and solemn colours. Even the brightest and warmest of colours might be selected, if the aspect required it, and so treated as to produce the effect of extreme stillness. We might almost venture to colour a library crimson, or orange itself, and not interrupt the associations of quiet more than if we used drab or neutral tints. In rooms applied to the purpose of study, there should be no contrasts of colours. When the colour is chosen, none but shades of that same colour should be introduced—in the room itself or its furniture; and even these should not be violently contrasted, but gradually blended and harmonized together. If the walls are papered, the patterns should be extremely simple, and unobtrusive. More, perhaps, from association than any other cause, painting upon wood-work seems unsuitable to a library, and no colour seems so proper as that of the wood itself, both for the book-shelves, the doors, and even the flooring. We think no one will dispute this point of taste who is familiar with the libraries of our universities, where, in the majority of cases, the oak-work has been left unpainted. At Blenheim, the wood-work of the library is painted a deadly cold white; and at the library of All Souls' College, Oxford, the shelves are coloured a sombre, disagreeable green, so solemn and grim-looking, that the fancy of a student would be entirely suppressed by it. In both these instances the general impression is uncomfortable. At Windsor, in the Queen's private library, there is a general use of black and crimson, or rather scarlet, in the furniture, and the effect in conjunction with the surrounding oak colour, though seemingly opposed to the principle of avoiding contrasts in a library, is decidedly good.

In Dining-rooms

we may employ considerable varieties of colour, provided they are harmoniously combined; but very vivid contrasts should rather be avoided. The colours should be of a stronger shade, and have a more substantial appearance than in breakfast or drawing-rooms; and we may even venture on gilding, if it is used with judgment and in small quantities. Unless the aspect of the dining-room is south or south-west, walls of crimson may always be used with good effect. It is a most safe colour to hang all pictures or prints against, and few rooms now-a-days are wanting in

Digitized by Google

them. Unmindful of the aspect being south, the state rooms at St. James's Palace, which have been recently decorated, have been hung with crimson flock paper. Even at this season of the year, the impression suggested is hot and uncomfortable. What will it be in a crowded drawing-room in the month of June? Indeed, the general taste in the re-decoration of these rooms, seems to us a little below what we have a right to expect in a palace—in a palace, too, especially used for state and public ceremonies. Architecturally, the rooms themselves have nothing to boast of, and their architecture is not likely to suggest characteristic decoration: they are well-proportioned apartments, generally devoid of ornament, and the little there is, belongs to the Age of Louis the Fourteenth. Still, something better might surely have been done. The ceilings are nearly the same in colour as the doors and woodwork—a reddish white. The ornaments and mouldings are covered with heavy masses of gilding, laid on with a lavish and tasteless hand. The walls are of a deep crimson-pink. The ornamental patterns are of a common-place heavy character, in raised flock paper. A high *whitish* dado supports this deep body of colour. The whole strikes us as being of a very common-place character, little likely to impress foreigners with favourable views of our progress in taste.

Always bearing in mind the question of aspect, stronger contrasts and greater varieties may enter into the treatment of colours in a

Drawing-room

than in other apartments. As this class of rooms is most constantly used in the evening, we must be especially mindful not to employ colours which become changed in appearance by artificial light, or which do not "light up" well, as ladies of taste commonly express themselves in such matters. Thus all greens, except that bright and peculiar one known as "Emerald green," must be especially avoided, since by an artificial light they become undistinguishable from blues. No blues but bright blues should be used. Dark blue becomes very dull and heavy. Purple and dark green are little better than black by lamp light. Yet we have seen the panels of some most tasteful boudoirs hung with dark green velvet. Pale yellows or primrose colour become white. When the colours of the furniture are light and cool in tone, French white and gilding may be judiciously used in a drawing-room, and emerald green, in union with white and gilding upon the wood-work and ceilings, has a lively and brilliant effect. It is in the drawing-room, that gilding may be most profusely introduced, and probably there is no kind of architecture likely to be met with in our country at the present time which would forbid its use. When well executed, gilding is durable for many years, even amidst the smoke and dirt of a London habitation. In a country atmosphere, it lasts bright for more than a century—and is capable of being cleaned and restored.

In no rooms is there greater latitude for the display of judicious harmony of colours than in

Bed-rooms,

because in them we find the masses for colouring—in the bed-furniture, the carpets and walls—very equally distributed. Here as in all other rooms, the consideration of aspect is omnipotent. On account of its superior facility for insuring cleanliness by frequent washing, our own choice induces us to recommend white furniture for the hangings of the bed, universally, but especially in London; and there is no difficulty, even with this large mass of white, in realizing excellent harmony of colouring either with warm or cool colours surrounding it.

For Passages, Halls, and Staircases,

variety of colours, as well as any strong contrast between them, is rather to be avoided. It does not appear to us necessary that they should be always cool in tone, as Mr. Hay suggests: on the contrary, we think it important that these parts should suggest comfortable warmth in a cold aspect; at the same time we would have the colouring rather of a neutral character, in order that the features of colouring in each of the rooms leading from the staircases and passages should appear the more marked and characteristic. Although, as a general rule, we are averse to any kind of imitation in decoration, we are inclined not only to tolerate but to recommend, for the sake of its superior economy, the employment of the imitative marble and wood-work papers, for the passages of the middling and smaller sized houses. The papers we allude to, are of comparatively recent introduction, and are produced, not as the coarsely marked old-fashioned marble and oak papers were, by block printing, but by hand work. The success of these modern imitations in the best of them is so perfect, that they are hardly distinguishable from the reality. There is no mechanical monotony in the graining, which is flowing and well blended, and we have all the variety of colour and marking that is found in the wood and marble themselves. The cost of these papers with the hanging and varnishing after hanging is not half the price of three coats of good oil-painting. In this case we can tender to the reader our own experience as to the cost and durability of a paper thus applied to a passage. It is nearly five years since we knew a staircase covered with an oak grained paper, varnished, and the doors, mouldings, and other wood-work throughout the staircase, grained correspondingly. The cost of the best execution in this mode, was below half the estimate for painting in plain colours the same surface, and the wear has been excellent. It is desirable after the first year of the hanging of the paper to have a second coat of varnish applied, whereby a good surface is obtained which admits of cleaning.

What shall colours be mixed in?

We have thus far spoken generally of the main principles which should regulate the choice and treatment of colours in ordinary house painting, but have said nothing as to the particular medium or vehicle in which the colours themselves should be mixed and used. This may be either oil or water. Oil-painting must be used in almost all cases where wood-work is to be coloured, for water-colours are not very adhesive to a wood surface, and are soon rubbed off where there is much wear. Oil-painting is also commonly used for colouring plaster and other surfaces; but in these cases oil is by no means so essential as in wood-work. For surfaces which are subject to become soiled and dirty, oil-painting should be used, as it admits of cleansing, if well and properly done; but in places which are not peculiarly exposed to these common accidents, water-colouring will suffice, and is preferable on account of its vastly superior cheapness. The best distemper or water-colouring may be performed at almost one-fourth the price of oil-colouring. Walls to receive water-colouring are much protected from injury by blows and scratches, if they are first covered with paper before being coloured. This adds to the cost, but it is not at all necessary for the production of ornamental effects, and may be dispensed with where the usage of the walls is not likely to be rough. In such cases the colouring may be painted at once on the plaster itself.

It seems—though we do not know that any actual experiments have yet been made—that the colouring of walls in water-colours might be done once, and for ever, in a most effective way, after the fresco fashion. It would only be necessary to use proper lime in plastering the walls. Lime would doubtless have to be expressly prepared as for fresco painting; but as the preparation is little more than a work of time, there do not appear to be any great difficulties in the process. We look forward to an early day for seeing ornamental paintings in fresco on the walls of houses of the larger size; but the suggestion here thrown out is meant for application generally to the commonest kind of plaster walls.

The general opinion seems to be, that unpapered walls have a common, unfinished effect, and such an opinion, founded on their usual mode of treatment, is not incorrect; but this need not be the case. A judiciously coloured apartment, which has some slight ornamental bordering, or which is divided into panels by lines, may at a very trifling cost be made to assume a far more tasteful appearance, than one which is covered by fashionable papers of the most expensive sort, bordered with a gold beading at a shilling per foot. The principal reason for a preference of the use of water-colours, is their superior economy to oil-painting. In all cases, however, where durability is desirable, oil-painting is preferable. It may be remarked, that there are certain tints of colours which are realized more purely in water than in oil-colours; and that, as a general rule, water colours are quite suitable for ceilings.

Where wood-work has been once painted, paint must continue to be used; but where this has not been the case, we strongly recommend that the wood-work should not be painted unless for special reasons.

Varnishing Woods.

The opportunity of having the wood unpainted seldom occurs, except in new houses, and not even in them, unless very early means are taken to stop the painter's brush. The deal which is used in ordinary houses is often very handsomely marked in its graining, and if a little attention were paid to the selection of it, beautiful wood might be chosen for the panels of the doors, shutters, and the more conspicuous parts of the room. When the wood, which it is thought desirable should be kept free from painting, is new and fresh, it should receive two or three coats of copal varnish. For a few years its tone will resemble that of satin wood, and afterwards it will become somewhat richer in colour. We have seen wood thus treated, which has looked as handsome as grained work costing some shillings per yard in the imitation. The varnish being transparent, the knots, and veins, and marking in the wood are quite distinct. If it be desired to deepen the tone of the wood, asphaltum should be ground up with the varnish, and the colour may be toned to resemble the hue of the horse-chesnut. In panelled work it would be neither costly nor difficult to select wood of the same kind, but of different colourings and grainings, for the different parts, or to colour the beadings, leaving the panels untouched. Gilding on the beading produces an extremely handsome look. We have seen sunken mouldings filled in with great effect and beauty by black patterns, imitative of inlaid ebony, so good in appearance, that they can scarcely be distinguished from genuine wood-work, and, in this case, the success quite reconciles us to the imitation. These patterns may be produced with great sharpness and neatness by lithographic printing on straw coloured paper. Not only the perpendicular wood-work, but the horizontal, as in floors, may be varnished. Floors by being occasionally oiled, become rich in colour; and polished, the deal wood looks almost as well as the oak in colour, which we see only in houses of great magnificence. They are easily cleaned with a damp flannel, and require no scrubbing. Two or three Persian or Turkish rugs suffice for all carpeting, and the effect is very comfortable and luxurious. This mode of treatment by varnish, instead of paint, seems especially applicable to stairs. It is almost unnecessary to say that the cost is very much cheaper than oil painting, besides being oftentimes greatly superior in its coloured effect.

The treatment of ornamental patterns, though occurring in house painting, is not more connected with it than with other branches of ornamental decoration,—carpets, hangings, floor-cloths, &c., and we therefore prefer, as the subject cannot be merely glanced at, to postpone the consideration of it. In the meantime, however, we will not conclude this series of papers without a word of caution on the subject of—

Imitations.

We have already indicated what our views are on this subject generally, in speaking of the decorations at the Travellers' Club (see *ante*, p. 737).

As a general rule, we advise that all imitations should be avoided. Oftentimes what is most objectionable in taste may be traced to be imitation in some shape or other. The lowest kind of picture-making is that where the merits rest solely on imitation. Servile imitation is the last thing a great painter aims at. It ought equally to be avoided by the house-decorator. It is only tolerable in proportion as it is successful. It would, perhaps, be carrying objection to imitation too far, to decry the use of scagliola marbles, which so nearly resemble the original, that only a practised eye can distinguish them. These, as well as painted imitations of wood, are only tolerable where the genuine thing, or something as good, is unattainable, and where the work is *very* well done. We cannot excuse such things as painted imitative wood or stone at the British Museum, the passages of the Travellers' Club, or the Hall of the Reform Club.

All imitations of forms, such as mock painted windows, doors, cornices, mouldings, bas-reliefs of all kinds in metal or otherwise, show poverty of invention and meanness of taste. If a cornice is wanting

Digitized by Google

between a ceiling and the wall, either put it up, or find some legitimate ornament which shall supply its place. There is no excuse whatever for such things under any circumstances, but especially at the present time, when forms of every kind may be procured in material of every sort—plaster, paper, leather, caked sawdust, &c., at every variety of price. When we see imitations of these things perpetrated at much cost in great houses, we cannot be surprised at finding still worse imitations on the same false principles in houses of a lower grade. The imitation of metal-work painted on the panels of the doors of the Travellers' Club belongs to the same family of decorative fallacies as the Gothic archways and windows which cover the halls of houses at rentals of 20*l.* a-year.

Besides imitation of form, we have also imitation of colours in our ornaments and furniture; coloured flowers stamped all over the walls,—ill-executed affectations of wearisome monotony.

In all periods when Art may be said to have any distinctive character of its own,—we may take any of the epochs of Middle Age Art, even that of the Elizabethan period, considered to be one of the most mixed and debased,—we shall find that though ornament was based, as of necessity it must be, on the features of Nature, it did not affect a servile imitation of them. If the general form of a flower was taken, it was re-adapted to its purpose, being invested in its re-adaptation with a character of its own,—ceasing to be an imitation, and becoming a new creation.

In the foregoing papers we have said little or nothing about that propriety of coloured decoration, which is dependent on the style of the architecture. We are not unmindful how much the style of the architecture ought to be regarded in colouring, where there is any, and how much it has been regarded in the best period of Art; but our present object has been a much humbler one than that of addressing the historical painter and architect. Few modern domestic houses, even among the best, display any marked architectural character. To the majority of our houses, therefore, directions which would be applicable to the palazzi of modern Italy, would be useless. Our hints have rather been purposed to improve the coloured decorations of the houses of the middle class; and in preparing our observations, we have aspired to speak only to the house-painter, and not to the artist, which said house-painter now-a-days, unfortunately, does not even affect to be. We have not even entered upon the treatment of colouring, connected with the hanging of pictures, and the knick-knackeries of furniture, which are usually found now-a-days in all houses; we have not forgotten this branch of the subject, which may be treated independently or in connexion with the question of patterns. It would doubtless have contributed to both the reader's comfort and our own, to have had before us, for reference, specific examples of right and wrong practice in colouring; but this was obviously impracticable. If we find that our aim in this matter has not been vain, perhaps some opportunity of doing so may be found hereafter.

MISCELLANEA

Paris Academy of Sciences.—Dec. 4.—A paper was read by M. Séguier on the improvements effected by M. L. Bernard in the manufacture of fire-arms. It states that musket-barrels of his making, only 72 centimètres (about two feet) in length, and weighing less than 2lb. English, had been successively loaded with 11, 22, 33, 44, and even 50 grammes (nearly 2 ounces) of powder, and 62, 124, 186, 248, and 281 grammes of shot, being double, quadruple, sextuple, octuple, and decuple charges, and that they sustained these violent trials with only a bulging of half a millimètre. In one trial a barrel sustained, without bursting, a charge of 55 grammes of powder and 300 of shot.—A letter was received from Rio Janeiro, from M. de Castelnau, who has been charged by the Minister of Public Instruction with a scientific mission in South America. The letter contains the results of observations made at Rio. Notwithstanding the difficulties predicted for the remainder of his journey, the prosecution of which even the Emperor of Brazil has declared to be impossible, M. de Castelnau announces that he was about to set out for Villa-Rica, the capital of the district of the mines, from whence he will proceed to Paracatu, Goyaz, Mattogrosso, &c.—M. C. Deville communicated the results of the observations which he had made at the Antilles on the catastrophe of the 8th February. He shows that the oscillations were all in the same direction. As to the effects witnessed on the earth, he states that the openings were of two kinds—those of a simple cracking, and which were found alike on the plains and at all elevations—and others from which were thrown up water and mud to a height of about five feet, but without any gaseous emission. M. Deville's observations confirm the theories of M. de Buch and his distinction of central volcanoes and volcanic chains. The volcanic action presents two distinct tendencies—by one it centralizes its efforts round a point more or less elevated; by the other it distributes them in lines which have an invariable character.—*Dec.* 11.—M. Arago announced to the Academy that M. Faye had determined the parabolic elements of the comet discovered by him on the 22d ult., and ascertained from them that it is a new comet.—A paper by M. Pallas on the influence of leaves in the fecundation of plants, was then read.—A report was read by M. Pariset on a method of education for young idiots, by M. Seguin.—*Dec.* 18.—The only Report worthy of the slightest notice was on a new description of Diligence.

M. Casimir Delavigne.—At the funeral of M. Casimir Delavigne the corners of the pall were held by the Count de Montalivet, representing the King's household; M. Victor Hugo, representing the Institute; M. Melesville, on the part of the Society of Dramatic Authors; and M. Samson, for the Sociétaires of the Théâtre Français. Two of the King's carriages, and one belonging to the Duke de Nemours, came immediately after the funeral car. Several corporations of workmen also sent deputations. The members of the Institute, a great number of peers, deputies, and magistrates, M. Villemain, Minister of Public Instruction, M. Dupin, M. Béranger, the Committee of the Dramatic Association, the Society of Gens de Lettres, the artists of the Théâtre Français, the pupils of the Conservatoire, the principal performers of the Paris theatres—amongst the rest Mlle. Rachel and Mlle. Anais—accompanied the cortège. The *Siècle* gives the following account of the last moments of the Poet:—"The invalid, accompanied by his wife and son, was obliged to stop at Lyons by the progress of his malady. A physician was called in, who considered his illness fatal, and informed Madame Delavigne that her husband had only a few hours to live. He succeeded, however, by his manner in restoring calmness of mind to the patient, who had been at first alarmed. About eight o'clock the same evening, the poet, when lying in bed, and in full possession of his faculties, asked his wife, in order to amuse the son, to read aloud. She accordingly took up *Guy Mannering*, and continued reading for about three-quarters of an hour, at which time the patient asked for some drink. As she was taking some precaution, when offering him the glass, not to fatigue him, he cried out, 'Oh! give it, I am strong enough!' He then raised himself up with some difficulty, and, leaning his head on his right-hand, asked his wife to continue. But his features were already changed, for death was near. Madame Delavigne perceived the alteration, but, concealing her grief, she resumed her reading, which her emotion rendered unintelligible. 'Why,' said the dying man, 'you are skipping whole sentences;' and addressing his son told him to go on himself. A moment after the head of Casimir Delavigne fell back on the pillow. He began to recite some verses of a tragedy at which he had been at work for some time, and which was to be called 'Mélusine.' In two minutes after life had fled, and the nearly concluded work which occupied his thoughts during his last moments, perished with him, for it is well known that the deceased never wrote down his pieces until after having completed them in his mind, and then recited them from memory at the moment of preparing them for the theatre."

Ancient Ruins.—A late traveller, who has traversed a large portion of Northern Texas, reports that between Santa Fé and the Pacific, there are vestiges of ancient cities and ruined castles or temples. He says, that on one of the branches of the Rio Puerco, there is an immense pile of ruins, which appear to belong to an ancient temple. The building occupies an extent of more than an acre. There are many similar ruins on the Colorado. In one of the valleys of the Cordilleras traversed by this river, and about 400 miles from its mouth, there is a large temple still standing, its walls and spires presenting scarcely any trace of dilapidation. Near it, scattered along the declivity of a mountain, are the ruins of what must have been once a large city. The traces of a large aqueduct, part of which is in the solid rock, are still visible. Neither the Indians residing in the vicinity, nor the oldest Spanish settlers of the nearest settlements can give any account of the origin of these buildings.

Eruption of Mount Etna.—Aderno, Nov.—I wrote to you yesterday in great haste. During the time I was writing my letter the top of the mountain had commenced, with renewed vehemence, and with tremendous noise, to throw out, at first thick black clouds of smoke and vapour, and soon afterwards a mass of water, ashes, sand, and enormous stones, which flew away in every direction, and probably, at least to leeward, to a great distance. We did not think ourselves any longer secure, and we left it, to get nearer to the road leading to Aderno, as it had now become impossible, without much circuitous travelling, to reach Bronte, where I originally intended to proceed. We had, however, scarcely come into the open air, when we became aware that the present new volcano had also recommenced to rage, and to throw out a mass of fiery lava, which, as every unevenness of the ground has been filled up by the effluxions going on since the 18th, poured down with immense velocity into the valley in a southern direction from Bronte. The vapour which this efflux emitted, and the gas which developed itself, made breathing difficult. Being so near, we began to feel rather uneasy, and retired therefore towards Aderno, without, however, losing sight of the firestream. It had pursued in the mean time the direction taken up before, and rolled itself with a roaring noise over the road, already destroyed and covered thirty feet high with dross and rubbish, and over the descent, cultivated with great industry, towards the sloping banks of the Simeto. On this descent a great number of men and women, inhabitants of Bronte and its vicinity, were busy trying to save from this universal devastation the fruits of hard and uninterrupted toil of many years. When the firestream surprised them, some thirty persons were completely surrounded and burned to death, and several others could only be saved with great difficulty. Last night the new crater and the lava-stream presented a sight which cannot be described. The moon came coldly piercing through the gloomy clouds and hung her pale light over the country, bloodred illuminated by the fire of the eruption and of the liquid lava. Here and there, when the stream threw itself over a declivity or a craggy rock, a new awful noise arose; when the lava reached the trees or shrubs, clear flames were flickering up suddenly, but only for moments, and also the distant trees were seen to blaze and fall. During the night the imposing sight was heightened by vivid lightning forking through the darkness of the black clouds of smoke.—*Augsburg Gazette.*

To what uses we may return.—Some of the timbers of the Royal George, that great sea-coffin in which 800 men, women, and children, were buried at Spithead in the year 1782, have, it is reported in the daily papers, been manufactured into a billiard-table for Her Majesty! with "a suitable incription"(!) affixed to the top of the cushion, "engraved on a copper-plate formed from some of the hoops of a powder-barrel, brought up from the magazine." To speculate on what may have been the suitable inscription, would perhaps, as Horatio says, be "to consider too curiously."

Liber Scholasticus.—In our review of this work we observed, "The author states that Merchant Taylors' School has forty-three Fellowships at St. John's College, Oxford; thus confounding six Law Exhibitions, which are but temporary, with Fellowships which are permanent." The author, in reply, observes, "What I did say, is, thirty-seven Fellowships, six Civil Law Fellowships; thus distinguishing accurately, instead of confounding." It appears to us, that the words quoted confirm our statement to the very letter, and that, even now, the writer does not understand the well-known difference between an Exhibition and a Fellowship.

NEW EDITIONS.
I. THE COOK'S ORACLE. 5s. 6d.
"We venture to prophesy that the 'Cook's Oracle' will be considered as the English Institute of Cookery."—*Edinburgh Review.*
II. DALGAIRNS' COOKERY. 6s.
This Volume contains a Complete System of Practical Cookery, carefully adapted to the purposes of every-day life.
Robert Cadell, Edinburgh; Houlston & Stoneman, London.

Nearly ready,
ETCH'D THOUGHTS, a New Work by THE ETCHING CLUB, consisting of Sixty Etchings on Copper, many of large size, with illustrative Letter-press, original and selected.
Plan of Publication.
First 20 copies, India proofs, half imperial paper, bound in cloth and gilt, each, Ten Guineas.
200 copies quarter imperial India paper, bound in cloth and gilt, each, Six Guineas.
After the above 220 copies have been printed the plates will be destroyed.
Subscribers' names received by the Honorary Secretary, Mr. S. Redgrave, Hyde Park-gate, Kensington.

THE LANCET for the 23rd instant, contains Communications from Dr. Serny, former Pupil and late Partner with Dr. Harrison, Physician to Harrison's Spinal Infirmary. On the Evidences of two Electric Fluids; The Structure of Nervous Fibrils; and The Nature of Light.
The above Communications are the result of many years' experience in the treatment of Spinal Affections and Deformities of the Limbs; they regulate his mode of practice so as, with time, to produce the most happy terminations, as his Work on Spinal Curvature can prove, by satisfactory Cases.—To be had of Messrs. Sherwood & Co. 23, Paternoster-row, London.
No. 8, Nottingham-terrace, New-road, Regent's-park.—May be consulted at his Residence from 12 to 1 o'clock.
December 27, 1843.

Just published, by S. J. MACHEN, 28, Westmorland-street, DUBLIN;
Sold in London by Houlston & Stoneman; Simpkin, Marshall & Co., &c. Liverpool: G. Philip; and by all Booksellers.
HEBREW.
PSALMS of DAVID (First Twelve) in Hebrew, with an improved Latin Translation, and Pronunciation according to the vowel points; with an extensive Praxis. To which is appended a Hebrew Grammar, by the Rev. W. Baillie, L.L.D. 8vo. cloth, pp. 261. 14s.
"This work is the best ever published on the subject, and includes many of the modern improvements of Gesenius and others, not to be found in 'Bythner's Lyra.' We recommend this book for its comprehensiveness, which is no ordinary merit. The prefix, if we may so speak, of the first twelve Psalms, in Hebrew, with a Latin Version, Pronunciation, and Parsing, renders this Work still more complete and valuable. It is an excellent plan to have a good grammar, and a sufficiently wide field for its practical application within the compass of the same volume. As Dr. Baillie has been so candid as to acknowledge his obligations to Mr. Benmohel for his superintendence of the press, we cannot withhold our commendation of its accuracy. We seldom meet a work with so few errata, and those of such little consequence."—*Christian Examiner.*
LATIN.
School and College Virgil, 12mo. bound, containing the Bucolics, Georgics, and First Six Æneids, with copious English Notes by Richard Galbraith, editor of an improved edition of the Eton Latin Grammar, and H. Owgan, Ex-Schol. &c. T.C.D. 2nd edition, greatly enlarged and improved, by H. Edwardes, A.M. T.C.D. and G. B. Wheeler, A.B. Ex-Schol. &c. T.C.D.
"This is the very best edition of Virgil, in any language; the Prolegomena ably written; and the copious Notes collected from the most learned commentators and critics supplying all the information the student can stand in want of. We have not seen a more careful or instructive publication of this class, and we heartily recommend it."—*Literary Gazette.*
Nearly ready,
Part III., containing Æneids, Books VII. to XII.
*** Schools ordering 50 or more copies can have the Notes and Prolegomena separate from the Text, at a proportionate reduction.
FRENCH.
The French Teacher (Third Series), or the Art of translating English into French at Sight, showing at once the difference of idiom between the two Languages; with an extensive Syntax and Tables of the French Verbs, regular and irregular. The whole forming a complete and easy method for the English to speak pure French in a very short time. To the work is appended a Dictionary of upwards of 5,000 words, &c.
☞ The Publisher wishes to draw particular attention to the above Work, for the originality of the plan, &c., as no similar publication has ever appeared. It will, also, answer as a Key to the French Teacher, Second Series, or L'Echo des Salons; and the Second Series will answer as a Key to the Third Series, for self-instruction.
ENGLISH.
Gregory's Complete Course of Engineering, &c. 2 vols. price 10s. 6d. each.
Young's Pronouncing and Etymological Spelling-Book; adapted for Junior and Senior Classes, to the purposes of liberal Education; in which the Principles of Pronunciation and Etymology are gradually developed; and the Greek, Latin, and French Roots of several thousand words added; together with Etymological Exercises, Critical Observations, &c. By Townsend Young, L.L.D. The First Part, containing 120 pages, price 1s. bound, or the two parts bound together, 1s. 6d.
"We strongly recommend all persons engaged in teaching, to see this work, as we feel confident they will approve of it, and, by their using it, tend to the advancement of youth, and their own reputation, as it is unquestionably the most accurate, systematic, and polite introduction to our language."—*Statesman.*
The Hand-book of English Grammar, comprising in a concise and simple form, the substance of all the most approved English Grammars extant; with questions for Exercise, and copious Examples for Parsing, &c. Also an extensive Glossary of the principal Words made use of in this Treatise, pointing out the roots and meanings of those derived from the Hebrew, Greek, Latin, and French Languages, with a reference to the pages where the words first occur in the Treatise, so as to show their application more clearly, and to supply the student with a selection of Greek and Latin terms, with their meanings in English, that will contribute to render his future introduction to the study of these languages comparatively easy. 18mo. bound, price 1s.
"This work is, in our opinion, one of the best elementary books yet given to the public. It comprises, in a concise and simple form, the substance of all the most approved English grammars extant, divested of all those difficulties which, in so many instances, present an almost insurmountable barrier to the tyro's progress."—*Waterford Mail.*

CORPORATION OF THE LONDON ASSURANCE,
Established by Royal Charter, A.D. 1720.
Offices, 19, Birchin-lane, Cornhill, and 10, Regent-street.

NOTICE is hereby given to all persons who have paid to this Corporation five years' premium on assurances effected on lives under the plan entitling the assured to a reduction of premium, commenced in 1831, and of which the details are already before the public, that on the 1st of January, 1844, when their next annual premium will become due, they will be entitled to an abatement of 31l. 1s. 11d. per cent. thereon.
Fire assurances may be effected with this Corporation at the most moderate rates.
Marine assurances may be made with this Corporation at the current premiums of the day.
Attendance daily, from 10 till 4, at both Offices, where prospectuses and every information may be obtained.
JOHN LAURENCE, Sec.

ECONOMIC LIFE ASSURANCE SOCIETY,
No. 34, Bridge-street, Blackfriars, London: established 1823.
Empowered by Act of Parliament, 3 William IV.
Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits.
The bonus declared in 1834 amounted upon an average to 16l. per cent. on the premiums then paid; and in 1839 a second bonus was declared, amounting on the average to 31l. per cent. on the premiums paid during the preceding five years.
Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.
CAMPBELL JAMES DOWNER, Sec.

VICTORIA LIFE ASSURANCE COMPANY.
Trustees.

Sir Jas. Duke, Ald. M.P. *Chairman*	Benj. Hawes, Esq. *Dep. Chairman*
Benj. Barnard, Esq.	Charles Baldwin, Esq.

Peculiar advantages are offered by this Company. Thus:—
Parties assuring the lives of others may make their policies secure, notwithstanding the life assured may go out of the limits of Europe, without the necessary permission of the Directors having been previously obtained.
Credit of half the premiums for the first five years allowed on policies effected for the whole term of life.
Assurances may be effected *with* or *without* profits—on an ascending or descending scale, or for short periods.
Advances made to Assurers on real or undoubted personal security, for terms not exceeding three years, repayable by instalments.
Attention is particularly requested to the detailed prospectuses of the Company, which may be obtained at the Office, 18, King William-street, City, or by letter, addressed to the Secretary. WILLIAM RATRAY, Actuary and Secretary.

WESTERN LIFE ASSURANCE SOCIETY,
49, Parliament-street, Westminster.—Capital 500,000l.
Directors.

Henry Edgeworth Bicknell, Esq.	James Hunt, Esq.
William Cabel, Esq.	John Arscott Lethbridge, Esq.
Thos. Somers Cocks, jun. Esq.	Edmund Lucas, Esq.
George Henry Drew, Esq.	George Kennet Pollock, Esq.
William Evans, Esq.	James Lys Seager, Esq.
William Freeman, Esq.	John Bazley White, Esq.
Francis Fuller, Esq.	Joseph Carter Wood, Esq.
Joseph Henry Goodhart, Esq.	

Physician—William Richard Basham, M.D.
Surgeons—Alfred Leggatt, Esq.; George D. Pollock, Esq.
Bankers—Messrs. Cocks, Biddulph & Co.
Solicitors—Messrs. J. L. Bicknell and J. C. Lethbridge.
The leading features of this Society are—
The very moderate Rate of Premium when viewed as combined with *perfect security* to the assured.
The advantage to the Assurers (by Table 2) of becoming entitled to *three-fourths* of the *profits*.
The assurance of a *certain bonus*.
The facility for *securing debts*.
The allowance of *half* the Annual Premium to remain unpaid for *seven years*, and
The accommodation of *temporary loans* to the Assured on available security. Immediate and deferred Annuities are granted by this Society on terms advantageous to the Public.
A liberal Commission allowed to Professional Gentlemen and Agents introducing business to the Office.
EDWARD T. RICHARDSON, Secretary.

THE DISSENTERS' and GENERAL LIFE and FIRE ASSURANCE COMPANY. Instituted 1837.
Empowered by Special Act of Parliament, 3 Vic. c. 20., 62, King William-street, London Bridge, London; 21, St. David-street, Edinburgh; 6, King-street, Queen-square, Bristol; and St. Andrew's Hall, Plain, Norwich.—Capital, One Million.
Trustees and Directors.

George Bousfield, Esq.	Sir John Pirie, Bart. and Ald.
Thomas Challis, Esq. & Ald.	Thomas Piper, Esq.
Sir J. Easthope, Bart. M.P.	Thomas B. Simpson, Esq.
Peter Ellis, Esq.	Edward Smith, Esq.
Joseph Fletcher, Esq.	Hon. C. P. Villiers, M.P.
Richard Hollier, Esq.	John Wilks, Esq.
Charles Hindley, Esq. M.P.	Edward Wilson, Esq.

On the return of the Christmas Quarter, the Directors beg to remind their Friends and the Public, that in the FIRE DEPARTMENT they receive risks of all descriptions, including Chapels, School-Rooms, Mills, Goods and Shipping in Dock, Farming Stock, &c., at the same reduced rates as other respectable Companies, and make no charge for Fire Policies transferred from other Offices. In the LIFE DEPARTMENT they continue to transact all business relating to Life Assurances, Annuities, and Family Endowments, upon the most liberal terms consistent with sound principles and public security.
Loans also are granted on equitable terms to Life Assurers on Life Interests, or satisfactory personal securities. Particulars as to all departments may be obtained from the principal Offices in London, Edinburgh, Bristol, and Norwich, and from the several Agents throughout England, Scotland, and Wales; and to all Agents and Solicitors, Surveyors and Auctioneers, liberal allowances will be made.
By order of the Directors,
THOMAS PRICE, Secretary.

FAMILY ENDOWMENT SOCIETY, LIFE ASSURANCE and ANNUITY OFFICE,
12, Chatham-place, Blackfriars, London.
Directors.

E. Lennox Boyd, Esq. *Assist. Resident*	John Ritchie, Esq.
Charles Downes, Esq.	F. H. Thomson, Esq.

Secretary—Patrick Macintyre, Esq.
This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834. In 1841, the Company declared an addition to the Shareholders of one-half of their Stock, and also added 2l. per cent. per annum, from the date of the policies to those parties who had insured with profits. The premiums, nevertheless, are on the most moderate scale, and only a moiety need be paid for the first five years, where the Insurance is for life.
The amount of bonus added to policies since the commencement of the Company in March, 1834, to the 31st Dec. 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£126 13 4
1000	4 Years	80 0 0
1000	3 Years	60 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq. and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.
Frederick Hale Thomson, Esq. *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past 2.

CHRISTMAS PRESENTS.—DIMES & ELAM, Artists' Colourmen, 91, Great Russell-street, Bloomsbury, invite inspection of their stock of BOXES of COLOURS, suitable for OIL or WATER-COLOUR Painting, forming useful Gifts at the present season to young friends having a taste for the Fine Arts. Price 3s. 6d. to Ten Guineas.
Every Material connected with Drawing, Painting, and Fancy Stationery.—*Near the British Museum.*

RECONNOITERING TELESCOPES.—These beautiful instruments are peculiarly adapted for military gentlemen, tourists, &c. Their exceeding portability, measuring only 3½ inches when closed, and their admirable performance (showing distinctly Jupiter's moons), have given the greatest satisfaction. The price, 35s., sent by post for 1s.—To be had of the Maker, J. DAVIS, Optician, Derby.

TO THE CLERGY AND CHURCHWARDENS.
THE Subscriber respectfully intimates that he is now able to execute orders for Altar Cloths, Communion Linen, Surplices, and Ecclesiastical Carpets, exactly copied from ancient examples, and suited in material and price for Village Churches, *at one day's notice.* Parcels free to London, Birmingham, York, and Liverpool.—Altar Cloths of Velvet, with Embroidery in Gold, prepared to order in fourteen days.—Specimens at No. 13, Henrietta-street, Covent-garden.
GILBERT J. FRENCH, Bolton-le-Moors, Lancashire.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles are greatly improved, and do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8d. per lb. Sold by G. E. Parish, agent for exportation, 21½, Bread-street, City; and at the Manufactory, Old Bargehouse, Christchurch, Surrey.

METCALFE'S NEW PATTERN TOOTH BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1s. An improved Clothes Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-brushes, with the durable unbleached Russian bristles, which do not soften like common hair. Flesh Brushes, of improved graduated and powerful friction. Velvet brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, 130 B., Oxford-street, one door from Holles-street.
Caution—Beware of the words "From Metcalfe's," adopted by some houses.

MECHI'S UNIQUE NEW YEAR'S PRESENTS.—No. 4, LEADENHALL-STREET, London.—SUPERB LADIES' CABINETS and JEWEL CASES, Elegant papier maché tables, chess tables, work-boxes, card boxes for playing cards, visiting card cases, work boxes, desks, and dressing cases, pole screens, hand screens, card racks, envelope cases, vases, netting boxes, portfolios, note and cake baskets, superb teatrays, and table inkstands, presenting a tout ensemble of splendour and elegance not to be equalled in London. The papier maché manufactures are superb and various in their design, the prices varying from 50 guineas to a few shillings. A few high-priced elegancies will be sold at cost prices to clear the stock. Bagatelle tables, backgammon and chess boards, table cutlery, and Sheffield plate as usual.

NEW FARMERS' NEWSPAPER.

THE time has come when Landlords and Tenants, large Farmers and small, must devote their anxious attention to improved cultivation—when, in the words of Sir Robert Peel, **"All must learn how, in the shortest time and at the least expense, to produce the greatest quantity of food, vegetable or animal, without permanent injury to the land."** To accomplish this, no means can be so effectual as that which brings the results of Experience and Science before every man, in a cheap form. For this purpose THE AGRICULTURAL GAZETTE is to be established.

The Proprietors are aware of the difficulties of dealing with the many details of cultivation without an acquaintance with circumstances, often as varying as places. They condemn the idea of conducting farming operations upon one invariable plan, and, while they welcome science as the best auxiliary of practice, they regard crude speculations as the most dangerous of delusions. But, they also feel that in Agriculture, as in all other arts, there are general principles upon which successful farming must depend: that there are practical errors which no local circumstances can justify; in short, that there is room for improvement even in those branches which are best understood. No one man can be competent to deal with the multifarious questions affecting husbandry, and the duty of the Editor of such a Paper as THE AGRICULTURAL GAZETTE is to make known the knowledge of all. It is to practical Farmers that the Proprietors trust for the means of carrying out their views, and not to the talents of any individual. While, therefore, they state that the Editor of THE AGRICULTURAL GAZETTE will be a gentleman well acquainted with the best kind of Farming, in which he is actively engaged, they feel it to be of far more importance to announce the promise of assistance received from the landed and farming interest generally, especially of those whose names they are permitted to mention:—

The Right Honourable the Earl Spencer, President of the Royal Agricultural Society of England

The Right Hon. the Earl of Ducie, Vice-President of the Royal Agricultural Society of England
Sir Charles Lemon, Bart. M.P., one of the Council of the Royal Agricultural Society of England

D. J. Niblett, Esq., Haresfield
R. Aglionby Slaney, Esq. Walford Manor, Shiffnal, Salop
S. D. Stirling, Esq., Glenbervie, Falkirk
W. B. Wingate, Esq., Hareby, Bolingbroke, Lincolnshire
Mr. John Brodie, Haddington
Mr. John Morton, Agent to the Earl of Ducie
Mr. Shoosmith, Folkington, Sussex

The Practice of Agriculture—its Science—Animal and Vegetable Physiology—Improvements in Implements—better modes of Husbandry—results of well-conducted experimental Farming—Growth and Rotation of Crops—Stock—Drainage—Irrigation—Foresting—Road making—Farm-Buildings—Labourers—in short, whatever affects the beneficial employment of capital in land—will form topics of consideration. Reports will be given of the English, Scotch, and Irish Agricultural Societies—London Market Prices of Corn, Hay, and Cattle, and the Weekly Averages. Replies to questions connected with the object of the paper will also be furnished weekly.

Considering the union which exists between Horticulture and Agriculture, it has been thought advisable to make THE AGRICULTURAL GAZETTE an addition to the GARDENERS' CHRONICLE, edited by DR. LINDLEY, and so extensively known; but that there may be ample room for discussion, that Paper *will be increased one-half in size without additional charge*—thus Twenty-four Columns will be occupied, as at present, by Horticulture, and Twenty-four by the General News of the Week, whilst

Twenty-four Columns will be devoted to Agriculture.

On Saturday next, therefore, January 6th, will be published, price SIXPENCE, stamped to go free by post,

THE FIRST NUMBER OF

THE GARDENERS' CHRONICLE
AND
AGRICULTURAL GAZETTE:

A Weekly Record of Rural Economy and General News.

THE HORTICULTURAL PART EDITED BY PROFESSOR LINDLEY.

THE principle on which the Gardening part of this paper has been conducted has been to make it a weekly record of everything that bears upon Horticulture, Floriculture, Arboriculture, or Garden Botany, and such Natural History as has a relation to Gardening, with Notices and Criticisms of all works on such subjects. Connected with this part are WEEKLY CALENDARS OF GARDENING OPERATIONS, given in detail, and adapted to the objects of persons in every station of life; so that the Cottager with a few rods of ground before his door, the Amateur who has only a greenhouse, and the Manager of extensive gardens, are alike informed of the routine of operations which the varying seasons render necessary. It moreover contains Reports of Horticultural Exhibitions and Proceedings—Notices of Novelties and Improvements—in short, everything that can tend to advance the profession, benefit the condition of the workman, or conduce to the pleasure of his employer; accompanied with Woodcuts, whenever the matter treated of requires that mode of illustration.

To this Farming, as explained above, will now be added.

Lastly, that description of domestic and political News is introduced which is usually found in a Weekly Newspaper. It is unnecessary to dwell on this head further than to say, that the Proprietors do not range themselves under the banners of any party; their earnest endeavours have been to make THE GARDENERS' CHRONICLE a full and comprehensive *Record of Facts* only—a Newspaper in the true sense of the word—leaving the reader to form his own opinions; their object being the elucidation of the laws of Nature, not of man. The reader is thus furnished, IN ADDITION TO THE PECULIAR FEATURES OF THE JOURNAL, with such information concerning the events of the day, as supersedes the necessity of his providing himself with any other Weekly Paper.

The Proprietors are happy to announce that the following distinguished Botanists, Florists, and Practical Gardeners have already enriched the GARDENERS' CHRONICLE by their communications:—

The Hon. and Very Rev. W. Herbert, Dean of Manchester
The Hon. and Rev. Charles Bathurst
Hon. W. Fox Strangways
Sir Oswald Mosley, Bart.
Sir W. J. Hooker, Royal Gardens, Kew
Dr. Horner, Hull
Dr. Lankester, F.L.S.
Rev. J. M. Berkeley
J. Bateman, Esq. Knypersley
Mr. W. Billington, Oswestry
Mr. Ingram, Gardener to Her Majesty
Mr. Paxton, Gardener to the Duke of Devonshire
Mr. Alexander, Gardener to the Duke of Leinster
Mr. Ferguson, Gardener to the Duke of Buckingham
Mr. Spenser, Gardener to the Marquis of Lansdowne
Mr. Elliott, Gardener to the Earl of Tyrconnell

The Hon. and Rev. L. Vernon Harcourt
Hon. Algernon Herbert
Sir George Mackenzie, Bart.
Sir Charles Wolesey, Bart.
Dr. Bevan, Llanferry
Dr. Gregory, Aberdeen
Dr. Ingram, President of Trinity College, Oxford
Rev. J. B. Reade
Mr. Henderson, Gardener to the Earl Fitzwilliam
Mr. Frost, Gardener to Lady Grenville
Mr. Haythorn, Gardener to Lord Middleton
Mr. Halliday, late Gardener to Lord Sondes
Mr. Brown, Gardener to Lord Southampton
Mr. Errington, Gardener to Sir P. Egerton, Bart.
Mr. Fortune, Hothouse Dept., Hort. Gardens, Chiswick
Mr. Thompson, Fruit Dept., Hort. Gardens, Chiswick

G. Bentham, Esq. late Secretary of the Horticul. Society
L. W. Dillwyn, Esq., Sketty Hall
J. D. Llewelyn, Esq., Penllergare
Mr. Bailey, Gardener to the Archbishop of York
Mr. Mackintosh, Gardener to the Duke of Buccleuch
Mr. Moffatt, Gardener to the Duke of Newcastle
Mr. Tillery, Gardener to the Duke of Portland
Mr. Cooper, Gardener to the Earl Fitzwilliam
Mr. Bowers, Gardener to the Earl of Lucan
Mr. Forsyth, Gardener to the Earl of Shrewsbury
Mr. Buchan, Gardener to Lord Bagot
Mr. Beaton, Gardener to Sir W. Middleton, Bart.
Mr. Booth, Gardener to Sir C. Lemon, Bart.
Mr. Whiting, Gardener to H. T. Hope, Esq. M.P.
Mr. James Drummond, Gardener, Blair Drummond
Mr. Gordon, Hardy Dept., Horticultural Gardens, Chiswick

OFFICE FOR ADVERTISEMENTS AND COMMUNICATIONS, 3, CHARLES STREET, COVENT GARDEN, LONDON.

Now ready,

DANIELL'S BOOK-BUYER'S ANNUAL

For 1844;

Being a CATALOGUE of about FIFTEEN THOUSAND VOLUMES of CHEAP BOOKS, generally in excellent condition, and warranted perfect, unless otherwise expressed, consisting of

THEOLOGY, WORKS ON PAINTING AND THE FINE ARTS, GREEK AND LATIN CLASSICS,
And Miscellaneous English and Foreign Literature, on Sale by

EDWARD DANIELL, 53, Mortimer-street, Cavendish-square,

Having various Collections placed at the end, in the following order:—Agriculture and Botany—America—Ireland—Scotland—Mathematics—Medicine and Surgery—Music and Dancing—Tracts in Volumes—Books of Prints, Architecture, and Painting—and French, German, Italian, &c.

Any Lady or Gentleman forwarding their address as above, may have the Catalogue GRATIS, and sent free to any part of London; or free into the Country, by enclosing twelve penny postage stamps.

A few selections from the Annual for 1844:—

BIBLE (Holy) and Testament, Reeves's edition, beautifully printed, with short explanatory and Philological Notes, large paper, 9 vols. royal 4to. most extensively illustrated with Engravings by Ancient and Modern Masters, upwards of two thousand in number, among which are some beautiful series by Westall, Fittler, &c., also Bybelsche Historien by Visscher—Hist. Bilder Bible by U. Krause—Icones Bibliceæ by Melchoir Kysel—Figures de la Passion de N. S. Jésus Christ, by Seb. le Clerc—with many by Picart—Sturt—Faithorne—Sadeler—Israel—Visscher—Collaert—M. de Vos—Wierinx—Galle, &c., the 9 thick vols. are uncut, and well bound with broad morocco backs and corners, cloth sides and gilt tops, 14*l.* 14*s.* 190

Annual Register (Dodsley's), from the commencement in 1758 to 1836, and Index complete, 80 vols., a good tall set, very neatly half-bound calf, gilt backs, 17*l.* 17*s.* 1758—1836

—— Ditto, to 1836, with Index, 80 vols. all uncut, and nearly all first editions, 12*l.* 12*s.* 1758—1836

—— from the commencement to 1819, uniformly bound calf, neat, and 1820 to 1824, in boards, with Index, 68 vols. 4*l.* 18*s.*, very cheap. 1758—1824

Archæologia, or Miscellaneous Tracts relating to Antiquity, published by the Society of Antiquaries, 17 vols. with the Index, Collection of Ordinances, and Regulations for the Government of the Royal Household—Liber Quotidianus, 19 vols. uniformly bound, very fine bright old calf gilt, 18*l.* 18*s.* 1770—1812

Atlas—Pinkerton's Modern, exhibiting the various Divisions of the World, with its chief Empires, Kingdoms, and States, 60 fine large coloured maps, imp. folio, half-bound, 3*l.* 3*s.* 1815

Banks's (T. C.) Dormant and Extinct Baronage of England, or an Historical and Genealogical Account of the Lives, &c. of the English Nobility, from the Norman Conquest, with Tables, &c., large paper, illustrated with Plates of Arms, Monuments, &c. 3 vols. royal 4to. half cloth, uncut, 2*l.* 15*s.* 1807—9

Bayley's (John) History and Antiquities of the Tower of London, with Biographical Anecdotes, of Royal and Distinguished Persons, deduced from Records, State Papers, and MSS. 31 fine plates, including the three additional, 2 vols. 4to. half cloth, 1*l.* 4*s.* (pub. at 6*l.* 16*s.* 6*d.*) 1821

—— Ditto, half-bound roan, edges uncut, 1*l.* 8*s.*; or well half-bound morocco, marbled leaves, 1*l.* 18*s.*

Bayley's History and Antiquities of the Tower of London, large paper, India proof plates, very scarce, (made up with two sheets of small paper), 2*l.* 12*s.* 6*d.*

E. D. having purchased several copies of this important Historical Work, is enabled to offer them at these exceedingly low prices (much lower than it has ever before been offered at), and those who have not got it, should immediately give it a place in their Library, not only for the deeply interesting associations connected with the Tower, but as being the best record of those parts which were destroyed in the late Fire.

Bell's (Charles) Essays on the Anatomy of Expression in Painting, 31 fine spirited etchings, large paper, royal 4to. half-bound russia, neat, scarce, 2*l.* 4*s.* 1806

Biographie Universelle, ancienne et moderne, ou Histoire, par ordre alphabétique, de la Vie de tous les hommes qui se sont faits remarquer par leurs Ecrits, leurs Actions, &c. Ouvrage entièrement neuf, rédigé par une Société de Gens de Lettres, 52 vols. 8vo. half-bound calf gilt, double lettered, marbled leaves, 13*l.* 13*s.* (pub. at 24*l.* unbound) Paris, 1811—28

British Poets.—The Works of the English Poets from Chaucer to Cowper; including the Series edited, with Prefaces, &c. by Dr. Johnson, and the most approved Translations, with additional Lives by Alex. Chalmers, 21 vols. royal 8vo. bound calf, marble leaves, 9*l.* (pub. at 25*l.* unbound) 1810

Byron's (Lord) Works, and Life by Moore, plates by Finden, 17 vols. 12mo. cloth, 2*l.* 9*s.* (pub. at 4*l.* 5*s.*) 1833

—— Another, well and neatly half-bound, morocco, marble leaves, 4*l.* 1833

Ciceronis Opera omnia, cum notis variorum, curis Græevii, Davisii, Proust, &c. &c., fine set, uniformly bound, in 33 vols. 8vo. neat old calf gilt, 4*l.* 10*s.* Amst. 1699, &c.

Collins's Peerage of England, Genealogical, Biographical, and Historical, greatly augmented and continued by Sir E. Brydges, plates of Arms, 9 vols. 8vo. bound, calf gilt, 3*l.* 13*s.* 6*d.* 1812

Cook's (Capt. J.) First Voyage round the World, by Hawkesworth, original edition, plates and charts, 3 vols. 1773—Second Voyage, 2 vols.—Ditto, 1777, 5 vols. bound, calf, neat, and folio atlas, half-bound—Third Voyage, maps, charts, and plates, 3 vols. royal 4to. bound, russia, marbled leaves, in all 9 vols., fine clean copies, 3*l.* 15*s.*

Edinburgh Review, from the commencement in 1802 to 1842, complete with both Indexes, 76 vols. 8vo. half-bound calf, neat, double lettered, a good clean set, bound from numbers, 12*l.* 10*s.* 1803—42

Encyclopædia Britannica, 4th edition, illustrated with nearly 600 plates, 20 vols. 1810—Supplement to Ditto, with Preliminary Dissertations, by Napier, plates, 6 vols.—26 vols. 4to. bound neat and strong in calf, 9*l.* Edin.

Encyclopædia Britannica, 7th edition, greatly improved, with the Supplements incorporated, edited by Professor Napier, numerous plates, 21 vols. 4to. bound, half russia, marbled leaves, 29*l.* 10*s.* Just completed and published at 39*l.* 12*s.* unbound.

Gibbon's History of the Decline and Fall of the Roman Empire, portraits and maps, 6 vols. 1782—Miscellaneous Works, with his Life, Notes, &c. by Lord Sheffield, 3 vols. 1796—9 vols. 4to., very neat old calf gilt, 4*l.* 14*s.* 6*d.* 1815

Gibson's (Bp.) Preservative against Popery, in several Select Discourses upon the principal heads of Controversy between Protestants and Papists, written and published by the most eminent Divines of the Church of England, chiefly in the reign of King James II., good copy, 2 thick vols. folio, calf, very rare, 4*l.* 10*s.* 1738

Guercino—Eighty-two Prints, engraved by F. Bartolozzi, &c. from the Original Drawings of Guercino, good old impressions, 2 vols. royal folio, half-bound russia, 3*l.* 3*s.*

Hearne and Byrne's Antiquities of Great Britain, consisting of 84 beautiful engravings of Monasteries, Castles, and Churches in England and Scotland, with Descriptions in English and French, very fine impressions, 2 vols. oblong folio, boards, 2*l.* 16*s.* 1807

Heath's Gallery of British Engravings, containing 220 beautiful engravings, 4 vols. royal 8vo. half-bound calf, neat, 2*l.* 2*s.* 1836—8

Hogarth's (W.) Genuine Works, illustrated with Biographical Anecdotes, a Chronological Catalogue and Commentary by J. Nichols and G. Steevens, about 160 plates, 2 vols. 4to. half-bd., morocco backs and corners, gilt tops, 2*l.* 10*s.* 1808

—— Ditto, with Descriptions, and a Comment on their Moral Tendency, by the Rev. J. Trusler, with Anecdotes of the Author and his Works, fine impressions of the plates, 2 vols. 4to. half-bound calf, neat, 1*l.* 14*s.* (pub. at 2*l.* in numbers); or 2 vols. in 1, half morocco, marbled leaves, 1*l.* 18*s.* 1833

Jones's (Sir W.) Works, portraits and plates, 6 vols. 4to. bound, russia, marbled leaves, 4*l.* 8*s.* 1799

Lardner's (Nathaniel) Works, with Chronological Tables and copious Indexes, by Kippis, best edition, 11 vols. royal 8vo. boards, 3*l.* 3*s.* 1780

"This edition, on which uncommon care was bestowed, has of late become scarce."—*Chalmers.*

Lavater's (John Caspar) Essays on Physiognomy, translated by Dr. H. Hunter, illustrated by more than eight hundred fine engravings, executed by, or under the inspection of T. Holloway, fine impressions, 5 vols. royal 4to. bound, russia, marbled leaves, 8*l.* 8*s.* (pub. at 31*l.* 10*s.* unbound) 1810

Lysons' Magna Britannia, being a Topographical Account of Bucks, Cambridgeshire, Cheshire, Cornwall, Cumberland, Derby, and Devon, numerous plates, with some additional inserted, 8 vols. royal 4to. half-bound, neat, uncut, 3*l.* 18*s.* 1806—22

Metastasio, Opere, con le Opere postume, plates, 17 vols. 8vo. sewed, 3*l.* (pub. at 6*l.* 6*s.*) Padova, 1811—12

Nicholls's (Dr. W.) Commentary on the Book of Common-Prayer, and Administration of the Sacraments, &c., being a Paraphrase on the Sunday and Holiday Services, Epistles, and Gospels, throughout the year, with Notes on all the Rubrics, &c., and the additional Notes of Bishops Andrews, Cosins, &c., fine portrait by Vandergucht, folio, fine clean copy in calf, gilt back, very scarce, 3*l.* 1712

Perry's (G.) Conchology, or the Natural History of Shells, containing a New Arrangement of the Genera and Species, illustrated by coloured engravings executed from the Natural Specimens, an original copy, the 61 plates most beautifully coloured, folio, half-bound, uncut, 3*l.* 3*s.* (pub. at 16*l.* 16*s.*) 1811

Portraits—A Collection of Two Hundred and Forty Portraits of Painters, chiefly 4to. and folio, collected principally to illustrate Pilkington's Dictionary, to be sold in one Lot, for 2*l.* 2*s.*, many of them worth 6*d.* and 1*s.* each.

Quarterly Review, from the commencement in 1809 to 1842, complete, with all the Indexes, 70 vols. half-bound, russia backs and corners, 11*l.* 11*s.* 1809—42

Raphael—Imagines Veteris ac Novi Testamenti, a Rubeis, 52 plates, the original edition, fine impressions, with G. Romano's Reliefs by Bartoli, 26 plates, fine impressions, bound at the end, oblong royal folio, calf, 2*l.* 10*s.* Romæ, 1674—86

Rapin's History of England, continued by Tindal and Smollett, numerous portraits, maps and plates, 5 vols. folio, very neat old calf gilt, 1*l.* 15*s.* 1732

Robson's British Herald, or Cabinet of Armorial Bearings of the Nobility and Gentry of Great Britain and Ireland, with a Complete Glossary of Heraldic Terms, and a History of Heraldry, numerous fine plates of coats of arms, and the insignia of all the Orders of Knighthood, 3 vols. 4to. boards, 3*l.* 18*s.* (published at 10*l.*) 1830

Sandford's (F.—*Lancaster Herald*) Genealogical History of the Kings of England, and Monarchs of Great Britain, &c. from the Conquest, 1066, to 1677, numerous plates by Hollar, &c. fine impressions, folio, neat, old calf gilt, good copy, 2*l.* 10*s.* 1677

Savage's (W.) Practical Hints on Decorative Printing, with numerous illustrations, exhibiting a variety of book decorations, and specimens of printing in colours, 4to. half-bound morocco, edges uncut, 18*s.* (pub. at 5*l.* 15*s.* in bds.) 1822

—— Another, printed on large thick paper, an original subscription copy, folio, bds., 1*l.* 5*s.* (pub. at 11*l.* 11*s.*) 1822
